SAP Code 135783  
CRA Project No. 201232-001

Dear Mr. Smith:

Conestoga-Rovers & Associates (CRA) prepared this report on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell) to document the recent underground storage tank (UST) removal activities at the referenced site. Under Livermore-Pleasanton Fire Department (LPFD) direction, Cambria Environmental Technology, Inc. (Cambria) performed soil sampling following the removal of one waste oil UST. Cambria performed the work in accordance with Alameda County Health Care Services Agency (ACHCSA) and San Francisco Bay Regional Water Quality Control Board (RWQCB) guidelines.

#### **SITE DESCRIPTION**

The subject site is an active Shell-branded service station located on the northwest corner of the Santa Rita Road and Valley Avenue intersection in Pleasanton, California (Figure 1). Prior to the waste oil UST removal, the site layout included a station building, three gasoline USTs, one waste oil UST, and four dispenser islands. (Figure 2).

## SAMPLING ACTIVITIES AND SAMPLE ANALYSES

On February 14, 2007, Wayne Perry, Inc. (Wayne Perry) of Sacramento, California removed one 550-gallon single-wall fiberglass waste oil UST. Attachment A presents CRA's standard tank removal sampling procedures.

### *Personnel Present:*

- Paul Smith, Hazardous Materials Inspector, LPFD
- Chris Steadman, Construction Foreman, Wayne Perry
- Celina Hernandez, Senior Staff Geologist, CRA (formerly Cambria)

*Sampling Date:* February 14, 2007

*UST Removal Observations:* Cambria observed no cracks, holes, or corrosion in the UST upon removal.

*UST Excavation Soil Sampling:* Cambria collected one soil sample (WO-1-12) from the bottom of the UST excavation at a depth of 12 feet below grade using an excavator. Figure 2 shows the sampling location. The soil was removed from the excavator bucket and packed into a clean brass sample tube; the tube ends were covered with Teflon® tape and plastic end caps. The soil sample was labeled, placed into a cooler with ice, entered onto a chain of custody record, and transported to a California-certified analytical laboratory.

*Chemical Analyses:* State-certified laboratory TestAmerica Analytical Testing Corporation (TestAmerica) of Sacramento, California analyzed the sample for:

- Oil and grease by EPA Method 413.1 (Modified);
- Total petroleum hydrocarbons as diesel (TPHd) by EPA Method 8015 (Modified);
- Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and total xylenes (BTEX), methyl tertiary-butyl ether (MTBE), ethyl tertiary-butyl ether (ETBE), di-isopropyl ether (DIPE), tertiary-amyl methyl ether (TAME), tertiary-butanol (TBA), 1,2-dichloroethane (1,2-DCA), 1,2-dibromoethane (EDB), and chlorinated hydrocarbons by EPA Method 8260B;
- Cadmium, chromium, lead, nickel, and zinc by EPA Method 6010B;
- Polychlorinated biphenyls (PCBs) by EPA Method 3545/8082; and
- Polynuclear aromatics (PNAs) and pentachlorophenol (PCP) by EPA Method 8270C.

Attachment B includes the laboratory report.

**Soil Disposal:** No soil or pea gravel was removed from the site during the waste oil UST removal activities. Cambria collected one four-point composite sample from the pea gravel removed from the UST excavation during soil sampling activities. State-certified laboratory TestAmerica analyzed the composite sample for:

- Total recoverable petroleum hydrocarbons by EPA Method 418.1 (Modified);
- TPHd by EPA Method 8015B with silica gel clean-up;
- TPHg, BTEX, and toxicity characteristic leaching procedure (TCLP) volatile organic compounds by EPA Method 8260B;
- Antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc by EPA Method 6010B;
- Mercury by EPA Method 7471A;
- TCLP semi-volatile organic compounds by EPA Method 8270C;
- PCBs by EPA Method 3545/8082;
- Total cyanide EPA Method 9014; and
- Sulfide by EPA Method 9034.

With approval from ACHCSA staff, the pea gravel was placed back into the excavation. Attachment B includes the laboratory report.

## **ANALYTICAL RESULTS**

Table 1 summarizes soil analytical results, and Attachment B presents the laboratory analytical reports. A summary of these data is presented below.

The soil sample (WO-1-12) collected from the UST excavation contained 6.5 milligrams per kilogram (mg/kg) TPHd, 0.19 mg/kg TPHg, 62 mg/kg chromium, 6.2 mg/kg lead, 91 mg/kg nickel, and 42 mg/kg zinc.

Based on these concentrations, Shell submitted an Underground Storage Tank Unauthorized Release (Leak)/Site Contamination Report (Unauthorized Release Report) on March 7, 2007. Attachment C presents this report.

Tank Removal Sampling Procedures

## **TANK REMOVAL SAMPLING PROCEDURES**

This document describes Conestoga-Rovers and Associates (CRA) standard operating procedures for collecting soil and ground water samples during underground storage tank removal. These procedures ensure that the samples are collected, handled, and documented in compliance with California Administration Code Title 23: Waters; Chapter 3: Water Resources Control Board; Subchapter 16: Underground Storage Tank Regulations (Title 23). CRA's sampling procedures are based on guidelines contained in the California State Regional Water Quality Control Board Tri-Regional Staff Recommendations for Preliminary Evaluation and Investigation of Underground Tank Sites dated August 10, 1990.

### **Tank Removal Sampling**

The objective of sample collection during routine underground storage tank removals is to determine whether hydrocarbons or other stored chemicals have leaked to the subsurface. If no ground water is encountered within the tank excavation, CRA will sample native soil 1 to 2 ft beneath the removed tank. Additional soil samples may also be collected at locations of obvious spillage to determine maximum concentrations in the surrounding soils. For underground storage tanks with a capacity of less than 1,000 gallons, one soil sample is collected beneath the fill end of the tank. For tanks with a capacity of between 1,000 and 10,000 gallons, one soil sample is collected beneath each end of the tank. For tanks larger than 10,000 gallons, 3 or more soil samples are collected beneath the removed tank. We also collect one soil sample for every 20 ft of product piping.

In cases where ground water is encountered within underground storage tank excavations, CRA will collect confirmatory soil samples from the excavation sidewalls just above the soil/ground water interface and a representative ground water sample from the excavation. The excavation is typically purged and allowed to recover prior to collecting the water sample. For tanks with capacities of 10,000 gallons or less, one soil sample is collected from the wall at each end of the tank excavation. For tanks with capacities greater than 10,000 gallons, or tank clusters, at least four soil samples are collected from the excavation walls next to the tank ends. Piping samples are collected in native soil 1 to 2 ft beneath the removed piping. One sample is typically collected for every 20 linear ft of piping unless regulatory agencies approve of different sampling requirements.

The soil samples are collected in steam cleaned brass or steel tubes from either a driven split-spoon type sampler or the bucket of a backhoe. When a backhoe is used, approximately three inches of soil are scraped from the surface and the tube is driven into the exposed soil.

Upon removal from the split-spoon sampler or the backhoe, the samples are trimmed flush, capped with Teflon sheets and plastic end caps, labeled, logged and refrigerated for delivery under chain of custody to a State certified analytic laboratory.

The ground water sample is collected using steam cleaned Teflon or PVC bailers, decanted into a volatile organic analysis (VOA) bottle or other appropriate clean sample container, refrigerated and transported under chain of custody to a State certified analytic laboratory.
