That shouldn't cause any problems.

Have a great weekend.

Subject RE: Question

Jim,

The soils are a Sandy Lean Clays and groundwater is at about 8 feet.

Matthew

Subject: Re: Question

Hi Mat,

I agree with Jay, the GORE(TM) Module should be able to detect the PAHs (up to Pyrene) and hydrocarbons (up to C20) of the Bunker fuel. Are there any special site conditions we should be aware of, such as perched water,

5/8/2007

extremely tight soils, etc?

Subject Re: Question [Link](#)

Matt,

We have used the tool to detect bunker oils in the past, no case study example though. We can reach SVOCs and PAH compounds as heavy as pyrene. The GORE Survey, and our TPH analysis, should map the presence of the oil via compounds in the soil gas. However, I will let our chemist, Jim, chime in.

Nice to hear from you and Clearwater Group, have a great afternoon!

Kind regards,
Jay W. Hodny, Ph.D.
