Dublin, California

SOIL GAS SAMPLING REPORT – FOURTH ROUND

Reference: Department of Toxic Substance Control (DTSC); Final Advisory Active Soil Gas Investigations; April 2012.

Dear Mr. Wickham:

ENGEO conducted the fourth round of soil gas sampling at the Jordan Ranch Parcel H (Site), located in Dublin, California (Figure 1). The soil gas sampling was performed to evaluate potential vapor intrusion concerns within the former underground storage tank (UST) area (Figure 2). Two new soil gas wells (SG-5 and SG-6) were included in the fourth sampling event and all six wells were sampled with a helium shroud.

BACKGROUND

There are currently no structures within the former UST area. Construction of high-density residential units within the Site may be planned for sometime in the future. As part of the proposed future development, up to 5 vertical feet of engineered fill will be placed on top of the existing grade for drainage purposes.

Four permanent soil gas wells were installed in the former UST area in June 2012. The soil gas wells were sampled in June 2012, October 2012, and February 2013. During all three sampling events, constituents were not detected above the residential environmental screening levels (ESLs) listed in Table E-2 published by the Regional Water Quality Control Board, San Francisco Region (SFRWQCB) and the residential California Human Health Screening Levels (CHHSLs) published by Department of Toxic Substances Control (DTSC); with the exception of one detection of benzene at 94 ug/m³.

Elevated concentrations of total petroleum hydrocarbons as gasoline (TPHg) and benzene have been detected in shallow groundwater (within 20 feet of the ground surface); however, these groundwater zones are present in perched, thin, discontinuous lenses separated by large intervals of dry soil. As a result, the total contaminant mass present in these groundwater zones is

relatively minor. The relatively limited detections in soil gas are attributed to the lack of significant quantities of contaminant mass within these groundwater zones. Furthermore, the remedial excavation of the former UST basin in 2011 removed the majority of the petroleum-impacted soil.

SOIL GAS WELL INSTALLATION

In February 2014, two new soil gas wells (SG-5 and SG-6) were installed to the north and south of the UST basin backfill (Figure 2). Consistent with the previously installed wells, the two new wells were installed to a depth of 7 feet in accordance with DTSC guidance (2012) and the County approved workplan dated January 15, 2014. The well construction diagram is attached. Two soil samples were collected from each boring between 0 and 5 feet bgs. The soil samples were analyzed for volatile organic compounds (VOCs) by EPA Test Method 8260B and polycyclic aromatic hydrocarbons (PAHs) by EPA Test Method 8310. The soil samples exhibited no detections above laboratory reporting limits.

SOIL GAS SAMPLING

We collected soil gas samples from the six soil gas monitoring wells on March 13 and April 22, 2014, providing a minimum of five days of dry weather after the last recorded rainfall. Soil gas well SG-6 was sampled on April 22 because the well had to be re-installed after we discovered there was inadequate flow on March 13. A helium shroud provided by McCampbell Analytical Laboratory was used for leak detection. We performed the sample collection in accordance with the 2012 Department of Toxic Substances Control (DTSC) guidance as follows:

- Prior to the connection of the sampling apparatus (“sample train”) to the well casing and system, we performed a “shut-in” test to assess potential leaks in the system. The test involved capping the end of the manifold, then applying a vacuum with the vacuum pump, closing the purge valve, and observing the vacuum gauge for two minutes to determine if there was a drop in vacuum. We observed no significant decreases in vacuum during the shut-in tests performed for this sampling event.
- We then connected the sample train to the well casing by threading the permanent Swagelok® fitting on the well casing onto the manifold. The sample train consisted of a stainless steel twin summa manifold with built in flow controller set to 100-200 ml/min, which was encompassed in a helium shroud provided by McCampbell Analytical. The sample train is shown here: <http://www.youtube.com/watch?v=pXsOquN8Rw&t=91>. A purge vacuum pump was attached to the manifold and one well volume of soil gas was purged from each well. Purge specifications are provided in Table A below.

TABLE A
Summary of Purging Process

Casing Length (feet)	Casing Volume Per Foot (ml)	Total Casing Volume (ml)	Sand Pack Pore Volume (ml) (50% Porosity)	Total Well Volume (ml)	Minutes (1x)
9.5	5	47.5	1,390	1437.5	9.6

Notes: Purge minutes are based on a flowrate of 150 ml/min
Sandpack is 3" diameter by 2 feet in length

- After purging was completed, a 20% helium content was established in the shroud and confirmed with a field meter prior to sampling. Once the 20% helium content was established, samples were collected by opening the sample canister valve and allowing the sample canister to extract soil gas until the vacuum in the sample canister reached approximately 5 inches of mercury. Soil gas well field sampling logs are attached.
- We labeled each sample canister with a unique identification number, sampling time, pre- and post-sample vacuum readings; and the six soil gas samples were submitted to a State certified laboratory for analysis of TPHg and volatile organic compounds (VOCs) by EPA Test Method TO-15; and methane, carbon dioxide, oxygen, and helium by EPA Test Method D1946.

LABORATORY ANALYTICAL RESULTS

TPHg was detected at concentrations ranging from 900 to 34,000 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). The maximum detected concentration of TPHg is less than the residential ESL of 370,000 $\mu\text{g}/\text{m}^3$ listed in Table E-2 of the SWRCB ESLs. Benzene was detected only in well SG-6 at a concentration of 50 $\mu\text{g}/\text{m}^3$. Table 1 (attached) provides a cumulative summary of all soil gas detections for the six monitoring wells and the applicable soil gas screening levels published by SWRCB and DTSC.

According to DTSC (2012), if the concentration of helium in the sample canister is less than 5% of the helium concentration in the shroud, then the sample results are considered valid. The highest helium concentration detected in the samples was 0.05%. This is 0.0025% of the 20% helium concentration that was maintained in the shroud. Based on this, we conclude that an adjustment factor is not required for the detected compounds.

We plan to perform the next soil gas sampling event in June 2014.

Glossary of Terms & Qualifier Definitions

Client: ENGEO Incorporated
Project: #7828000.001; Jordan Ranch
WorkOrder: 1403561

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DUP	Duplicate
EDL	Estimated Detection Limit
I	For PCB congeners 107, 108, 109, 199, 200, 201. There are conflicting naming conventions. MAI used the names cited in EPA Method 1668C (Table 2)
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not detected at or above the indicated MDL or RL
NR	Matrix interferences, or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix; or sample diluted due to high matrix or analyte content.
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
TEQ	Toxicity Equivalence

Quality Control Qualifiers

F1 MS/MSD recovery was out of acceptance criteria; LCS validated the prep batch.
F2 LCS recovery for this compound is outside of acceptance limits.

RE: Jordan Ranch

Work Order No.: 1403183

Dear Morgan Johnson:

Torrent Laboratory, Inc. received 2 sample(s) on March 25, 2014 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink, appearing to read "Patti Sandrock".

Patti Sandrock
QA Officer

April 01, 2014

Date

Date: 4/1/2014

Client: Engeo (San Ramon)

Project: Jordan Ranch

Work Order: 1403183

CASE NARRATIVE

No issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

p-Terphenyl-d14 (S)				6.3	88.9	79.6		24.3 - 129		

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit (PQL) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m3 , mg.m3 , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H - Indicates that the recommended holding time for the analyte or compound has been exceeded
J - Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather than quantitative
NA - Not Analyzed
N/A - Not Applicable
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R - The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S - Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Engeo (San Ramon)

Date and Time Received: 3/25/2014 12:10

Project Name: Jordan Ranch

Received By: rp

Work Order No.: 1403183

Physically Logged By: rp

Checklist Completed By: rp

Carrier Name: FedEx

Chain of Custody (COC) Information

Chain of custody present? Yes

Chain of custody signed when relinquished and received? Yes

Chain of custody agrees with sample labels? Yes

Custody seals intact on sample bottles? Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present

Shipping Container/Cooler In Good Condition? Yes

Samples in proper container/bottle? Yes

Samples containers intact? Yes

Sufficient sample volume for indicated test? Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes

Container/Temp Blank temperature in compliance? Yes Temperature: 4 °C

Water-VOA vials have zero headspace? No VOA vials submitted

Water-pH acceptable upon receipt? N/A

pH Checked by: na pH Adjusted by: na

"When Quality Counts"

Analytical Report

WorkOrder: 1404889

Report Created for: ENGEO Incorporated
2010 Crow Canyon Place, Ste 250
San Ramon, CA 94583-4634

Project Contact: Morgan Johnson

Project P.O.:

Project Name: #7828.000.001; Phase 5 Task 1

Project Received: 04/22/2014

Analytical Report reviewed & approved for release on 04/29/2014 by:

Laboratory Manager

***The report shall not be reproduced except in full, without the written approval of the laboratory.
The analytical results relate only to the items tested. Results reported conform to the most
current NELAP standards, where applicable, unless otherwise stated in the case narrative.***

Glossary of Terms & Qualifier Definitions

Client: ENGEO Incorporated
Project: #7828.000.001; Phase 5 Task 1
WorkOrder: 1404889

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not detected at or above the indicated MDL or RL
NR	Matrix interferences, or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix; or sample diluted due to high matrix or analyte content.
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
TEQ	Toxicity Equivalence

Quality Control Qualifiers

F2 LCS recovery for this compound is outside of acceptance limits.
