## 1.0 INTRODUCTION

AEI Consultants (AEI) has prepared this report to document the performance of the hydrogen peroxide infusion program and the Third Quarter 2012 groundwater monitoring event at the above referenced site (Figure 1, Site Location Map). The infusion program and groundwater monitoring is being performed in accordance with the requirements of the Alameda County Environmental Health (ACEH).

## 2.0 SITE DESCRIPTION AND HISTORY

The subject property is located on the northwestern corner of the intersection of Martin Luther King Jr. Way and 4<sup>th</sup> Street in a mixed commercial and industrial area of Oakland. The property measures approximately 100 feet along Martin Luther King and approximately 150 feet along 4<sup>th</sup> Street with the property building covering essentially 100% of the site. The building is currently vacant, but was previously occupied by Pucci Enterprises as warehouse space and cold storage freezers.

A Phase I Environmental Site Assessment (ESA) of the property dated November 1, 1993 identified a 10,000-gallon former gasoline UST abandoned in place below the northeast corner of the building. The gasoline UST was used to provide fuel for the Pucci Enterprises truck fleet.

### 2.1 Tank Closure

On October 20, 1993, the tank was abandoned in place by pumping remaining sludge out of the tank, steam cleaning the tank, and filling the tank with concrete slurry. At the time of the UST closure, it was believed that the tank could not be removed because of its proximity to the footing of the 671 4<sup>th</sup> Street building. The available records contain no documentation of sampling around the tank at the time of the tank closure. After tank closure, the eastern portion of the building (325 Martin Luther King) was constructed.

### 2.2 2005 AEI Investigation

In May 2005, AEI performed a Phase II Subsurface Investigation. Soil borings SB-1 and SB-3 encountered refusal at a depth of 4 feet bgs, at the top of the concrete filled UST. Soil borings SB-2 and SB-4 were advanced into the groundwater. Total Petroleum Hydrocarbons as gasoline (TPH-g), as diesel (TPH-d), and benzene were reported in groundwater from boring SB-2 at concentrations up to 780 micrograms per liter ( $\mu\text{g/L}$ ), 420  $\mu\text{g/L}$ , and 53  $\mu\text{g/L}$ , respectively.

### **2.3 2005 Terra Firma Investigation**

In September 2005, Terra Firma collected groundwater samples from four (4) soil borings (labeled 50901-1 to 50901-4). Analysis of the groundwater samples reported the highest concentrations of hydrocarbons in soil boring 50901-3 to the south of the UST, where TPH-g, TPH-d, and benzene were reported at concentrations of 20,000 µg/L, 3600 µg/L, and 990 µg/L, respectively.

### **2.4 2006 Ceres Investigation**

In June 2006, Ceres Associates (Ceres) advanced five soil borings (SB5 through SB9). The highest concentrations of hydrocarbons in the soil were reported in boring SB-7 (located southeast of the UST) where TPH-g, TPH-d, and benzene were reported in sample SB-7-10 at concentrations of 20,000 mg/kg, 3,300 mg/kg, 200 mg/kg, respectively. Analysis of groundwater samples from SB7 reported TPH-g, TPH-d, and benzene at concentrations of 110,000 µg/l, 110,000 µg/l, and 3,300 µg/l, respectively. Concentrations of TPH-g in the other soil borings ranged from ND <50 µg/l (SB5-GW) to 610 µg/l (SB8-GW).

### **2.5 2006 LRM Consulting Workplan**

LRM Consulting prepared release notification documentation and a workplan for the ACEH in August 2006. The workplan included additional file and data base research into possible additional source locations (dispenser, piping, offsite releases, etc) and installing three (3) 2-inch diameter monitoring wells a screened interval of 5 to 20 feet bgs.

### **2.6 2007 AEI Investigation**

Following ACEH comments relating to the work plan and previous investigations, AEI was retained to prepare a comprehensive workplan. The *Site Characterization Workplan*, dated March 31, 2007, outlined the scope of work for installation of 12 additional soil borings and three groundwater monitoring wells to further characterize the release.

In May of 2007, AEI performed a soil and groundwater investigation which included the drilling of additional twelve (12) soil borings at the property. Significant concentrations of TPH-g, TPH-d, and benzene in the soil were reported only in monitoring well MW-3 (MW-3-10), located down gradient of abandoned UST, at concentrations of 1,500 mg/kg, 240 mg/kg, and 6.0 mg/kg, respectively. Low concentrations (<210 µg/l) of TPH were reported down gradient of the abandoned UST in soil boring SB-10, SB-12, SB-13, SB-16, SB-17, SB-18, and SB-19.

Data from these investigations shows that the dissolved hydrocarbon plume is limited to the eastern most portion of 325 Martin Luther King Jr. Way, immediately down gradient of the abandoned in place UST. On August 10, 2007, AEI installed three (3) groundwater monitoring wells (MW-1 thru MW-3) down gradient of the abandoned in place UST. Significant concentrations of TPH-g, TPH-d and benzene were reported only in well MW-3 at concentrations of 24,000 µg/l, 1,200 µg/l, and 2,600 µg/l, respectively.

Site maps showing the locations of soil borings advanced and monitoring wells installed by AEI and well construction details are contained in AEI's *Soil and Groundwater Investigation Report*, dated September 21, 2007.

## 2.7 Chemical Oxidation Pilot Test

A *Corrective Action Pilot Test Workplan*, dated April 7, 2008, was prepared for the ACEH. The workplan proposed five injection points around monitoring well MW-3 using a RegenOx™ solution. The workplan was approved by the ACEH in a letter dated May 13, 2008. On July 17 and 18, 2008, 720 lbs. of RegenOx™ was injected in five locations (IP-1 through IP-5) at spacing approximately five feet away from well MW-3.

Following the pilot test, groundwater samples collected from well MW-3 on August 4, 2008 reported an increase in TPH-g from pre-pilot concentration from 20,000 µg/L to 110,000 µg/L. Follow up sampling on August 20, 2008 reported TPH-g at a concentration of 120,000 µg/L. This increase was the result of release of hydrocarbons adsorbed to clay, silt and sand grains in the smear zone (between 9 - 11 feet bgs).

This significant increase in TPH-g concentration indicated that the residual source area around the abandoned in place UST is significantly greater than had been anticipated and that several rounds of injection would be required to remediate the site. Based on the relative high cost of multiple direct push infusions using RegenOx™, installation of permanent injection points and alternate remedial approaches were evaluated. AEI determined that H<sub>2</sub>O<sub>2</sub> infusion through permanently installed wells was a lower cost approach to remediation. A *Hydrogen Peroxide Infusion Pilot Test Workplan*, dated August 12, 2009, was completed for the site and approved in a letter from the ACEH dated August 21, 2009.

## 2.8 Initial Hydrogen Peroxide Infusion

In December of 2009, a 2,400 gallon poly tank was placed on the site and manifolded to wells IW-1, IW-2 and IW-3. Between December 29, 2009, and January 29, 2010, 8,000 gallons of 0.5% H<sub>2</sub>O<sub>2</sub> was infused primarily into injection wells IW-2 and IW-3.

On February 8 and 24, 2010 following the infusion of 8,000 gallons of 0.5% H<sub>2</sub>O<sub>2</sub> solution, wells MW-3, IW-2, and IW-3 were sampled to determine the effects of the H<sub>2</sub>O<sub>2</sub> infusion. TPH-g in MW-3 decreased from 59,000 µg/L on October 30, 2009 to 16,000 µg/L on February 24, 2010. TPH-g in IW-2 decreased from 15,000 µg/L on October 30, 2009 to 3,500 µg/L on February 24, 2010. IW-3 decreased from 77,000 µg/L on November 23, 2009 to 36,000 µg/L on February 24, 2010.

Between March 16, 2010 and May 12, 2010, an additional 9,400 gallons of 0.5% H<sub>2</sub>O<sub>2</sub> were infused into wells IW-2 and IW-3. Between May 24, 2010 and June 29, 2010, 4,900 gallons of 1.25% H<sub>2</sub>O<sub>2</sub> were infused primarily into well IW-3.

Progress monitoring sampling was performed on May 24, July 19, and August 5, 2010. The results of the progress sampling through July 19, 2010 is summarized in Table 3 and in the *Hydrogen Peroxide Infusion Report* dated July 30, 2010. Results from the August 5, 2010

sampling event reported TPH-g in wells MW-3, and IW-1 at concentrations of 350 µg/L and 4,300 µg/L, respectively.

The third quarter 2010 monitoring event on September 9, 2010 reported TPH-g in wells MW-3, and IW-1 at concentrations of 1,200 µg/L and 22,000 µg/L, respectively.

Following the Third Quarter 2010 semi-annual monitoring event on September 9, 2010 hydrogen peroxide infusion into well IW-3 was resumed. Between September 21, 2010 and December 29, 2010 an additional 18,000 gallons of 0.5 % hydrogen peroxide was infused in well IW-3.

## **2.9 Post Infusion Monitoring**

The regularly scheduled First Quarter 2011 semiannual monitoring event was performed on March 24, 2011. No TPH-g or BTEX was reported in wells MW-1, MW-2, IW-1, or IW-2 at or below standard laboratory reporting limits.

TPH-g was reported in wells MW-3 and IW-3 at concentrations of 140 µg/L and 390 µg/L respectively.

The second semiannual monitoring event was performed on August 9, 2011. No TPH-g or BTEX was reported in wells MW-1, MW-2, IW-1, or IW-2 at or below standard laboratory reporting limits.

TPH-g and benzene concentrations in well MW-3 increased from concentrations of 590 µg/L and 38 µg/L, respectively on August 9, 2011 to 4,900 µg/L and 1,400 µg/L, respectively on December 14, 2011. The concentration of TPH-d increased from 200 µg/L to 1,000 µg/L.

TPH-g concentration in well IW-3 increased from 9,600 µg/L on August 9, 2011 to 36,000 µg/L and on December 14, 2011. Benzene concentration in well IW-2 increased from 2,400 µg/L on August 9, 2011 to 4,600 µg/L and on December 14, 2011.

## **2.10 Installation of Infusion Wells IW-4 and IW-5**

On November 29, 2011, AEI installed two addition infusion wells (IW-4 and IW-5) on the northeast side of the abandoned in place UST. The locations of the wells are shown on Figure 2. Well completion details are summarized on Table 1.

During the December 14, 2011 groundwater monitoring event TPH-g and benzene concentrations in IW-4 were reported at concentrations of 95,000 µg/L and 13,000 µg/L, respectively. TPH-g and benzene concentrations in IW-5 were reported at concentrations of 250 µg/L and 11 µg/L, respectively.

AEI recommended additional H<sub>2</sub>O<sub>2</sub> infusion following the recent installation of additional up gradient infusion wells (IW-4, IW-5).

## **2.11 Second Hydrogen Peroxide Infusion**

Infusion into well IW-4 was initiated on January 12, 2012. In January 2012, a 2400 gallon poly tank was placed on the site and manifolded directly to wells IW-3, IW-4, and IW-5. Between January 2012, and May 2012, approximately 12,000 gallons of 1% H<sub>2</sub>O<sub>2</sub> was infused into the wells, primarily into injection well IW-4. After the first week of infusion, only Well IW-4 was directly manifolded to the tank and casings of wells IW-1, IW-2, IW-3, and IW-5 were filled with H<sub>2</sub>O<sub>2</sub> during the weekly system checks. Average infusion is estimated to have been 0.1 gallon per minute.

## **3.0 THIRD QUARTER 2012 GROUNDWATER MONITORING EVENT**

### **3.1 Summary of Groundwater Sampling Activities**

On July 27, August 27, and October 24, 2012 groundwater monitoring wells MW-3, IW-3 and IW-4 were gauged and sampled, as part of performance monitoring of the hydrogen peroxide infusion program.

On September 21, 2012, a full monitoring event was performed which included all groundwater monitoring wells (MW-1 through MW-3 and infusion wells IW-1 through IW-5) at the site.

For each event, prior to purging and sampling the wells, the well caps were removed from each well. After allowing a minimum of 15 minutes for the water level in each well to reach equilibrium with atmospheric pressure, the depth to water in each well was measured with an electronic meter to a precision of  $\pm 0.01$  feet. Each well was then purged with a peristaltic pump with the bottom of the drop tube placed at approximately 10 feet bgs under a low flow protocol. Each well was purged until the groundwater parameters of temperature, pH, conductivity, dissolved oxygen (DO), oxygen reduction potential (ORP) and visual clarity stabilized.

Dissolved oxygen (DO) in wells MW-3 through IW-5 was reported at concentrations ranging from 4.97 mg/L (MW-3) to 6.37 mg/L (MW-5). DO concentrations in down gradient wells MW-1 and MW-2 were reported at concentrations of 1.64 mg/L and 2.97 mg/L, respectively. Historical DO measurements in IW-1, the most up gradient well on the site indicate that the DO in groundwater entering the site has a concentration that ranges from 1.0 to 2.0 mg/L.

Each water sample was collected into hydrochloric acid (HCl) preserved one liter amber bottle and three (3) 40-milliliter (ml) volatile organic analysis vials (VOAs) using the peristaltic pump. All samples were labeled with at minimum, project number, sample number, time, date, and sampler's name.

The samples were entered on a chain-of-custody form and placed on water ice in a pre-cooled ice chest pending same day transportation under chain of custody protocols to McCampbell Analytical, Inc. of Pittsburg, California (Department of Health Services Certification # 1644). The samples were analyzed for TPH-g and MBTEX using methods SW8021B/8015Bm, for TPH-d by method SW8015B, and for fuel oxygenates and lead scavengers by method SW8260B.

## 3.2 Analytical Results

### 3.2.1 July 27, 2012

Groundwater samples from the abbreviated July 27, 2012 event (wells MW-3, IW-3, and IW-4) were analyzed for TPH-g and MBTEX.

No TPH-g, TPH-d, MBTEX were reported in the groundwater samples from wells MW-3 or IW-3 at standard laboratory reporting limits.

TPH-g and MBTEX concentrations in well IW-4 decreased to 270 µg/L, ND<5.0 µg/L, 2.0 µg/L, 4.3 µg/L, 1.5 µg/L, 3.4 µg/L, respectively.

### 3.2.2 August 27, 2012

Groundwater samples from the abbreviated August 27, 2012 event (wells MW-3, IW-3, and IW-4) were analyzed for TPH-g and MBTEX.

TPH-g and MBTEX concentrations in well MW-3 decreased to 51 µg/L, ND<5.0 µg/L, 2.4 µg/L, ND<0.5 µg/L, ND<0.5 µg/L, 4.9 µg/L, respectively. TPH-d was reported at ND<50.

TPH-g and MBTEX concentrations in well IW-3 increased to 1,100 µg/L, ND<45 µg/L, 100 µg/L, 160 µg/L, 5.1 µg/L, 150 µg/L, respectively. TPH-d was reported at 130 µg/L.

TPH-g and MBTEX concentrations in well IW-4 increased to 2,900 µg/L, ND<50 µg/L, 230 µg/L, 520 µg/L, 46 µg/L, 260 µg/L, respectively. TPH-d was reported at 280 µg/L.

### 3.2.3 September 21, 2012

No TPH-g, MBTEX, fuel additives were reported in wells MW-1, MW-2, MW-3, IW-1, or IW-5 at standard laboratory reporting limits.

TPH and MBTEX concentrations in well IW-2 increased to concentrations of 91 µg/L, ND<0.5 µg/L, 0.89 µg/L, ND<0.5 µg/L, ND<0.5 µg/L, and 7.5 µg/L.

TPH-g and MBTEX concentrations in well IW-3 increased to concentrations of 4,300 µg/L, ND<50 µg/L, 460 µg/L, 580 µg/L, 32 µg/L, 560 µg/L, respectively.

TPH-g and MBTEX concentrations in well IW-4 increased to concentrations of 4,500 µg/L, ND<50 µg/L, 350 µg/L, 820 µg/L, 64 µg/L, and 370 µg/L, respectively.

Analysis for TPH-d in water samples from wells MW-3 and wells IW-2 through IW-5 reported TPH-d at concentrations of ND<50 µg/L, ND<50 µg/L, 360 µg/L, 150 µg/L, and ND<50 µg/L, respectively.

The analytical results from the September 21, 2012 monitoring event and previous sampling events are summarized in Table 2, Groundwater Elevation Data and Table 3, Groundwater Analytical Data. Groundwater Monitoring Well Field Sampling Forms, which include water quality data and other parameters collected during well purging are attached as Appendix A.

#### 4.0 SUMMARY

TPH-g concentrations have rebounded in wells IW-4 and IW-3 to concentrations of 21,000 µg/L and 4,400 µg/L, respectively. The rebound in these wells suggests that residual soil contamination remains up gradient of the UST, likely just outside of the building underneath the northern sidewalk.

#### 5.0 RECOMMENDATIONS

AEI believes that the bulk of the source material up gradient of the abandoned UST has been removed and requests that the site be considered for closure under the current low risk closure guidelines.

AEI will continue monthly sampling of wells MW-3, IW-3, and IW-4 until the hydrocarbon concentration in well IW-4 stabilizes. A progress report will be prepared following 2 more months of monitoring.

#### 7.0 REPORT LIMITATIONS AND SIGNATURES

This report presents a summary of work completed by AEI, including observations and descriptions of site conditions. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide requested information, but it cannot be assumed that they are entirely representative of all areas not sampled. All conclusions and recommendations are based on these analyses and observations. Conclusions beyond those stated and reported herein should not be inferred from this document.

These services were performed in accordance with generally accepted practices in the environmental engineering and construction field that existed at the time and location of the work. If you have any questions regarding this report, we can be reached at (925) 746-6000.

Sincerely,

**AEI Consultants**

Adrian M. Angel, GIT  
Project Geologist

Robert F. Flory, PG  
Senior Geologist

15	9/21/2012	6.48	-0.24	SW (0.002 )

ft amsl = feet above mean sea level

All water level depths are measured from the top of casing

\*\* Average calculated for all wells with 2/9/10 re-survey elevations

\*\*\* Average calculated for all wells with 12/14/2011re-survey elevations

## **APPENDIX B**

### **LABORATORY ANALYSES WITH CHAIN OF CUSTODY DOCUMENTATION**

## Analytical Report

AEI Consultants  2500 Camino Diablo, Ste. #200  Walnut Creek, CA 94597	Client Project ID: #277915; Allen	Date Sampled: 07/27/12
		Date Received: 07/27/12
	Client Contact: Robert Flory	Date Reported: 08/01/12
	Client P.O.: #WCO83684	Date Completed: 07/31/12

**WorkOrder: 1207697**

August 02, 2012

Dear Robert:

Enclosed within are:

- 1) The results of the **3** analyzed samples from your project: **#277915; Allen,**
- 2) QC data for the above samples, and
- 3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius  
Laboratory Manager  
McC Campbell Analytical, Inc.

*The analytical results relate only to the items tested.*

	Client P.O.: #WC083733	Date Completed: 08/29/12

**WorkOrder: 1208645**

August 31, 2012

Dear Robert:

Enclosed within are:

- 1) The results of the **3** analyzed samples from your project: **#277915; Allen,**
- 2) QC data for the above samples, and
- 3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius  
 Laboratory Manager  
 McC Campbell Analytical, Inc.

BATCH 70226 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1208645-001A	08/27/12 10:35 AM	08/28/12	08/28/12 6:33 AM	1208645-002A	08/27/12 11:35 AM	08/28/12	08/28/12 7:02 AM
1208645-003A	08/27/12 11:05 AM	08/28/12	08/28/12 9:44 PM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.  
 % Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).  
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.  
 £ TPH(btex) = sum of BTEX areas from the FID.  
 # cluttered chromatogram; sample peak coelutes with surrogate peak.  
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.  
 NR = matrix interference and/or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content, or inconsistency in sample containers.

## Analytical Report

AEI Consultants  2500 Camino Diablo, Ste.#200  Walnut Creek, CA 94597	Client Project ID: #277915; Allen	Date Sampled: 09/21/12
		Date Received: 09/21/12
	Client Contact: Robert Flory	Date Reported: 09/27/12
	Client P.O.: #WC083767	Date Completed: 09/26/12

**WorkOrder: 1209554**

September 27, 2012

Dear Robert:

Enclosed within are:

- 1) The results of the **8** analyzed samples from your project: **#277915; Allen,**
- 2) QC data for the above samples, and
- 3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius  
 Laboratory Manager  
 McC Campbell Analytical, Inc.

*The analytical results relate only to the items tested.*

BATCH 70995 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1209554-001B	09/21/12 8:15 AM	09/23/12	09/23/12 11:34 AM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.  
 $\% \text{ Recovery} = 100 * (\text{MS-Sample}) / (\text{Amount Spiked})$ ;  $\text{RPD} = 100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2)$ .  
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.  
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.  
 NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.  
 Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.  
 $\% \text{ Recovery} = 100 * (\text{MS-Sample}) / (\text{Amount Spiked}); \text{RPD} = 100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2).$   
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.  
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.  
 NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.  
 Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.

## Analytical Report

AEI Consultants  2500 Camino Diablo, Ste.#200  Walnut Creek, CA 94597	Client Project ID: #277915; Allen	Date Sampled: 10/24/12
		Date Received: 10/24/12
	Client Contact: Robert Flory	Date Reported: 10/29/12
	Client P.O.: #WC083825	Date Completed: 10/26/12

**WorkOrder: 1210797**

October 30, 2012

Dear Robert:

Enclosed within are:

- 1) The results of the **3** analyzed samples from your project: **#277915; Allen,**
- 2) QC data for the above samples, and
- 3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius  
 Laboratory Manager  
 McC Campbell Analytical, Inc.

*The analytical results relate only to the items tested.*
