Ryan,

Attached are the two reports with figures of the tank pit excavations. Both reports are also available on our website.

Both Donna and I indicated that boring permits were required from Alameda County Public Works. I was not aware of a waiting period to obtain permits.

Jerry,

Based on our research, a boring permit is required for the subsurface assessment work we discussed last week. The permit agency is the Alameda County Public Works Department Well Standards Program. Their web site states that "Permits are required for all work pertaining to wells and exploratory bores at any depth within the jurisdiction of the Well Standards Program." Their web site also indicates that the City of Oakland is within their jurisdiction. The County also indicated that the permit process takes approximately 10 working days to approve. A link to the County's web site is provided below:

<http://www.acgov.org/pwa/wells/index.shtml>

You and Donna indicated in our meeting last week that there is no permit required for the borings. Can you please clarify this or let me know if I am interpreting the County Public Works requirements incorrectly.

Also, as part of the boring permit application process, we need to provide a figure of the proposed boring locations. Can you please e-mail me the two figures you showed us in the meeting with the two different UST excavation areas so I can plot them on a figure for the boring permit application. Thanks.
