Thank you very much for getting out there early, we would really like your review of our boring locations and additional soil vapor boring locations should there be time in the day. Although I think the earlier the better, I will defer to Steve Clements to select at time. Steve?

Ryan,

I can visit your site sometime between 8:00 am and 11:00 am. Is there a specific time within that interval that you prefer?

Regards,
Jerry Wickham

Jerry,

The fieldwork is all set and ready to proceed. One change to my last e-mail....

We just completed a telecom with the laboratory to confirm scope and confirm lowered detection limits and they indicated that they can analyze the soil and groundwater samples for total petroleum hydrocarbons (TPH) as gasoline using 8260B. This was an acceptable method in your review letter of our Workplan, so we confirmed with the laboratory to analyze the samples for TPHg using 8260B. Just wanted to update you since the last e-mail indicated we were going to use 8015M.
