

Subject: RO2958 Ryan Marcos 2008-04-09
Entry Type: Phone call
Company: SCS Engineers

Start: Wed 4/9/2008 3:46 PM
End: Wed 4/9/2008 3:46 PM
Duration: 0 hours

Ryan Marcos called regarding ACEH comments on the work plan. A revised WP did not have to be submitted provided that our comments were implemented. He asked what criteria we would use to determine whether additional sampling would be required. Ryan Marcos indicated that they have a historic aerial photograph of the site. I indicated that they would need to scale their locations from known points of reference. Ryan Marcos objected to the collection of TPH data for soil because the TPH data would not be used directly in risk assessment. I cited the use of screening levels and the fact that the TPH data could help confirm that the locations are within a tank pit.
