RECEIVED

By Alameda County Environmental Health at 3:54 pm, Feb 10, 2015

Mr. Keith Nowell
Alameda County Department of Environmental Health
1131 Harbor Bay Parkway
Alameda, CA 94502-6577

**Subject: Downtown Oakland CNG Fueling Station, Second and Brush Streets,
RO# 2692**

Dear Mr. Nowell:

As required by your correspondence dated November 7, 2014, attached find the Site Investigation Results CNG Fueling Station report prepared by Weiss Associates dated February 5, 2015. This report documents the results of the workplan prepared by Baseline Environmental Consulting dated July 22, 2014.

I declare under penalty of perjury that the information and/or recommendations contained in the attached document is true and correct to the best of my knowledge.

Sincerely,

Diane Heinze
Diane Heinze
Environmental Assessment Supervisor

RE: Site Investigation Results
CNG Fueling Station
205 Brush Street, Oakland, California
ACEH Case No. RO0002962
Weiss Project No. 259-1971.15

Dear Ms. Heinze:

This letter report has been prepared for the Port of Oakland (Port) to present the results of Weiss Associates' (Weiss's) site investigation conducted in December 2014 at a compressed natural gas (CNG) fueling station located at 205 Brush Street in Oakland, California (Figure 1). As proposed in the *Work Plan to Investigate Petroleum Contamination at the CNG Fueling Station* (Work Plan; Baseline Environmental Consulting, 2014), the purpose of the investigation was to identify the source of hydrocarbons encountered during station construction and to assess the extent and magnitude of hydrocarbons in soil and groundwater. Based on the investigation results, Weiss recommends that the Port submit a case closure request to Alameda County Environmental Health (ACEH). A summary of the project background, investigation methods and results, and the basis for the case closure recommendation are presented below.

BACKGROUND

The site is located in a commercial and industrial area of Oakland, approximately 1,000 feet north of the Oakland Inner Harbor (Figure 1). It consists of the former National Ice and Cold Storage Company facility (National Ice) and a vacated portion of Second Street as shown on the 1951 Sanborn map (Figure 2). The site is bounded by the former Port Harbor Facilities to the north, Market Street to the west, Brush Street to the east, and Embarcadero West to the south. The site vicinity has been industrialized since the nineteenth century, and as a result, shallow soil in the area is impacted with polynuclear aromatic hydrocarbons (PAHs; Ebasco Environmental, 1991). Currently, the site is comprised of: 1) a CNG fueling facility that includes an aboveground compressor inside a cinder-block enclosure and a CNG fueling island for automobiles; 2) a paved parking lot; and 3) a paved parking lot used as a storage yard for a home decor retailer and distributor.

Based on Sanborn Fire Insurance Company maps from 1889 to 1912, the southern portion of the site that was later occupied by National Ice contained two structures that were used for hay storage. As seen in a 1930 aerial photograph and 1951 Sanborn map, several buildings associated with National Ice were constructed. Sanborn maps from 1951 to 1961 indicate the presence of an "Eng Room" and an adjacent "60 HP motor" in approximately the same location as the currently existing cinder-block enclosure that houses the CNG compressor.

Prior to construction of the CNG fueling station, geotechnical borings B-1 and B-2 were advanced to 35 feet below ground surface (bgs) in November 2006 (Figure 3). Three soil samples from unspecified depths were collected from each boring and analyzed for total petroleum hydrocarbons (TPH), and benzene, toluene, ethylbenzene and xylenes (BTEX). The maximum TPH concentration detected was 15 milligrams per kilogram (mg/kg), detected as TPH as diesel (TPH-D) in a sample from each boring. A sample from boring B-1 contained 1.6 mg/kg TPH as gasoline (TPH-G) and 0.0079 mg/kg xylenes; a sample from boring B-2 contained 0.0075 mg/kg benzene and 0.0076 mg/kg toluene. No other constituents were detected above reporting limits.

During trenching for construction of the fueling station in 2007, petroleum hydrocarbons were encountered in soil. Soil samples #1 and #2 were collected from approximately 2.0 and 2.5 feet bgs and contained TPH-D up to 39 mg/kg and TPH-G up to 9.1 mg/kg (Figures 4 and 5). Detectable concentrations of less than 0.06 mg/kg of the several individual VOCs were also detected; these VOCs were not halogenated and are commonly associated with crude oil and petroleum products.

In 2007, the Port retained a contractor to excavate soil from the proposed compressor location. The remedial excavation ultimately measured approximately 22 by 42 feet by a maximum of seven feet deep. Confirmation soil samples from the edges and bottom of the final excavation were collected and analyzed for TPH, BTEX, VOCs, and metals. Three of the 12 confirmation samples collected (two bottom samples and one southern sidewall sample) contained constituents above Environmental Screening Levels (ESLs; Figures 4 and 5; RWQCB, 2013). Approximately 200 cubic yards of soil were removed and transported as non-hazardous waste to Altamont Landfill in Livermore, California.

In July 2014, the Port submitted the Work Plan prepared by BASELINE Environmental Consulting. The objective, as stated in the Work Plan, was *“to identify the original source and assess the extent and magnitude of soil and groundwater impacts initially discovered during CNG station construction. There are three known plausible sources of contamination: (1) release associated with the engine/motor room(s) of the historical National Ice and Cold Storage facilities; (2) migration via groundwater of historical releases from the former diesel underground storage tank (UST) located about 50 feet northeast of the CNG station on the north side of vacated Second Street; and/or (3) migration via groundwater of historical releases from the former USTs located in the Harbor Facilities”* area, also located to the north of the site. The proposed scope of the investigation included advancing five soil borings, presumed to be in the downgradient direction from the UST sources on the adjacent site, to the north and in the vicinity of the former engine room.

Soil and groundwater samples were to be collected from the borings and analyzed for TPH, VOCs, and PAHs. Additionally, the shallowest soil sample from each boring was to be analyzed for California Code of Regulations (CCR) Title 22 metals to assess the surficial fill. ACEH approved the Work Plan on November 7, 2014 (Nowell, 2014).

METHODS

Weiss performed the site investigation in December 2014. Methods employed for the investigation are described below.

Permit and Line Locating

Prior to drilling, Weiss obtained a drilling permit from the Alameda County Public Works Agency (ACPWA) for the five borings (Attachment B). Weiss also notified Underground Service Alert North and retained a private line locator to conduct an electromagnetic survey for underground utility lines at the proposed drilling locations.

Drilling

Between December 12 and 16, 2014, Weiss retained Gregg Drilling and Testing, Inc. (California State Contractor's License No. C57-485165) to drill the borings using a hollow-stem auger rig. The lithology encountered in each boring was visually logged by a Professional Geologist using the Uniform Soil Classification System; boring logs are included in Attachment C. Four of the five borings were drilled to a depth of 15 feet bgs, and soil and groundwater samples were collected from these borings. Prior to the groundwater samples being collected, a pre-packed screen was installed in accordance with the Work Plan. No soil samples deeper than one-foot bgs or groundwater samples were collected from boring CNG-B5 due to auger refusal at six different locations adjacent to the proposed boring location (Figure 3).

After the soil and groundwater sampling was conducted (as described below), the pre-packed screens were removed from the borings. The borings were backfilled with Portland cement and hydrated bentonite chips under the observation of a grout inspector from the ACPWA. The surface at each boring was completed with cold-patch asphalt. Soil cuttings and decontamination and purge water from the drilling and sampling activities were stored in separate 55-gallon drums located on-site. Investigation derived waste has been disposed at an off-site facility. .

Sampling and Laboratory Analysis

Three soil samples were collected from each of borings CNG-B1 through CNG-B4: one sample at one-foot bgs; one sample at five feet bgs; and one sample at seven feet bgs; only a one-foot deep sample was collected from boring CNG-B5. The soil samples were collected in stainless steel tubes using a California-modified split-spoon sampler. Soil samples for TPH-G, BTEX, methyl tertiary-butyl ether (MTBE), and VOCs were collected using Terra Core samplers in accordance with United States Environmental Protection Agency (USEPA) Method 5035. Samples were stored in an iced cooler pending delivery to the analytical laboratory.

One groundwater sample was also collected from borings CNG-B1 through CNG-B4. A pre-packed screen, consisting of slotted polyvinyl chloride (PVC) pipe surrounded by a stainless steel mesh filled with sand, was installed in each boring between 10 and 15 feet bgs. The two-inch diameter slotted pipe was connected with a solid PVC pipe that extended above the ground surface. To allow suspended sediments to settle, the groundwater samples were collected at least one hour after the screens were installed. The groundwater samples were collected by inserting a bladder pump to the middle of each pre-packed screen. Each screen was micropurged at a flow rate not exceeding 500 milliliters per minute into polyethylene tubing, which gently discharged the water into the sample containers.

Two duplicate soil samples were collected in boring CNG-B4. The protocol had indicated to collect the rinseate blank and a duplicate water sample at CNG-B5. However, due to refusal in that boring, these quality assurance/quality control samples were not collected.

The samples were transported in iced coolers under chain-of-custody to Curtis and Tompkins, Ltd. in Berkeley, California. As specified in the Work Plan, soil and groundwater samples were analyzed for the following:

- TPH-G by USEPA Method 8015M;
- TPH-D and TPH as motor oil (TPH-MO); prepared with and without silica gel cleanup (SGCU) by USEPA Method 8015M;
- VOCs by USEPA Method 8260; and
- PAHs by USEPA Method 8270, selected ion monitoring (SIM).

The shallowest soil sample from each boring was also analyzed for Title 22 metals by USEPA Method 6010B. Analytical reports, chain-of-custody documentation, and Weiss's laboratory validation results are provided in Attachment D.

RESULTS

Hydrogeology and analytical results (soil and groundwater) from the site investigation are described below.

Hydrogeology

Soil observed in the borings consisted of a mixture of sandy fill pervasive with brick fragments from the ground surface to approximately five to seven feet bgs. Silty sand of variable color and permeability, consisting of 15 to 25 percent fines, was encountered below the fill to the total depth explored of 15 feet. This deeper unit is interpreted as the Merritt Sand. Groundwater was encountered between 5.0 and 6.5 feet bgs in the borings. Boring logs are included in Attachment C.

Analytical Results

Analytical results for the soil and groundwater samples are discussed below. The ESLs used to compare soil data are the shallow soil screening levels (less than three meters deep) for commercial/industrial land use where groundwater is not a current or potential drinking water resource. These ESLs were published in Table B-2 of the Regional Water Quality Control Board's Workbook dated December 2013.³ The groundwater ESLs are the screening levels for groundwater that is not a current or potential drinking water resource. These are shown in Table F-1b of the Workbook.

Soil Results

Except for arsenic, no metals exceeded ESLs in any of the one-foot deep samples collected from the five borings (Table 1). Arsenic concentrations ranged between 2.1 and 6.5 mg/kg. These concentrations are less than 11 mg/kg, and thus are consistent with regional background concentrations (Duverg , 2011).

The only soil samples to contain TPH-MO above ESLs were the one-foot deep samples from borings CNG-B3 and CNG-B4 (Figure 6); these samples contained 740 and 720 mg/kg, respectively, which are above the ESL of 500 mg/kg. These shallow TPH-MO detections may be the result of a near-surface source considering that both of these borings were located within the footprint of the former National Ice facility's engine room. The results for the deeper samples indicate that TPH-MO concentrations decrease with depth (Table 2). The TPH-MO results for the other borings and the TPH-D results for all four borings are not as high, but do exhibit a decreasing concentration trend with depth (Figure 6).

The soil samples for TPH-D and TPH-MO were analyzed with and without a prior silica gel cleanup (SGCU) preparation. A comparison of analytical results with and without SGCU may provide information about the fraction of polar and non-polar hydrocarbons in the sample as the preparation removes polar hydrocarbons. Polar hydrocarbons may be present due to the decay of fresh biological material in the sample rather than a chemical release. The polar fraction, though, may also represent polar intermediates that are weathering products of non-polar hydrocarbons (RWQCB, 2013). As shown in Table 2, the TPH-D and TPH-MO concentrations with and without SGCU for the soil samples from this investigation are not significantly different. This may indicate that most of the hydrocarbons are non-polar.

TPH-G also exceeded the ESL in the seven-foot deep sample from boring CNG-B3 at a concentration of 760 mg/kg (Figure 5; Table 2). Although this detection is above the ESL of 500 mg/kg, the laboratory indicated that the chromatogram did not match the gasoline standard. No BTEX (Figure 7) or MTBE concentrations were detected in any of the soil samples above method detection limits (Table 2), which also suggests that the positive TPH-G detections in this and other samples are not indicative of a gasoline release.

Although some VOCs were detected in soil, none were noted at concentrations above ESLs. The VOCs detected are generally associated with crude oil and petroleum products and/or industrial uses (Table 3). None of the detected VOCs are halogenated.

PAHs were also detected in the soil samples (Table 4). The detected PAHs are associated with crude oil, petroleum products, and/or combustion of organic matter. The source of the PAHs may be the former engine room or from an off-site source. There is documentation that shallow soil in the site vicinity contains PAHs that may be the result of historical industrial operations in the area. Weiss calculated the benzo(a)pyrene-equivalent (BaPe) values for the one-foot deep samples from the five borings. A BaPe value is the sum of the potency equivalency factor multiplied by the concentration of each carcinogenic PAH in the sample (Table 5). Although the individual PAHs from all site samples are below their respective ESLs, the BaPe value of 155 micrograms per kilogram ($\mu\text{g}/\text{kg}$) for the sample from boring CNG-B4 is above the benzo(a)pyrene ESL of 130 $\mu\text{g}/\text{kg}$, which is intended to address human health. However, a surface soil sample previously collected by Pacific Gas and Electric Company (PG&E) adjacent to the site has a BaPe value of 359 $\mu\text{g}/\text{kg}$ (Figure 8; RWQCB, 2013). The PG&E sampling investigation results indicate that surface soil in the site

vicinity is impacted with PAHs that are not related to the historical activities of National Ice or other on-site activities.

Groundwater Results

The groundwater samples from borings CNG-B1 and CNG-B2, located along the northern site boundary, contained no TPH-G or BTEX above method detection limits (Table 5; Figures 9 and 10). The samples contained 79 and 200 micrograms per liter ($\mu\text{g}/\text{L}$) TPH-D, respectively, but the laboratory reported that the CNG-B2 chromatogram did not match the diesel standard. Except for the trace value of 0.3 $\mu\text{g}/\text{L}$ MTBE in the boring CNG-B-1 sample, these results preclude the possibility that petroleum hydrocarbons are migrating onto the site from former USTs to the north.

As seen with the soil results, TPH results for groundwater from borings CNG-B3 and CNG-B4 exceeded ESLs (Table 6). The sample from boring CNG-B3 contained 1,100 $\mu\text{g}/\text{L}$ TPH-G (Figure 9); but similar to the seven-foot soil sample from the same boring, the laboratory reported that the chromatogram did not meet the gasoline standard. For the samples from borings CNG-B3 and CNG-B4, the TPH-D results were 2,200 and 2,400 $\mu\text{g}/\text{L}$, respectively (Figure 11); TPH-MO results were 940 and 3,700 $\mu\text{g}/\text{L}$, respectively (Figure 12). Unlike the soil results, the TPH-D and TPH-MO analyses with and without the prior SGCU yielded significantly different concentrations. This difference suggests that the groundwater samples contain a larger polar hydrocarbon fraction than the soil samples.

VOCs, including BTEX and MTBE, were not detected above ESLs (Tables 6 and 7). The VOCs with positive detections are generally compounds consistent with heavy hydrocarbons and concentrations detected would not be associated with a release of gasoline, solvent, or lighter mixtures of hydrocarbons.

Except for benzo[a]anthracene and benzo[a]pyrene in the sample from boring CNG-B4, no PAHs were detected above ESLs. The sample contained estimated concentrations (J-flagged) of 0.05 $\mu\text{g}/\text{L}$ benzo[a]anthracene and 0.02 $\mu\text{g}/\text{L}$ benzo[a]pyrene, which are slightly above the respective ESLs of 0.027 and 0.014 $\mu\text{g}/\text{L}$, respectively (Table 8). Because PAHs are highly insoluble, the detected concentrations are likely caused by PAHs sorbed to suspended solids in the grab groundwater samples and therefore may not be representative of dissolved concentrations.

CONCLUSIONS

The recent investigation results indicate that hydrocarbons detected in samples from construction of the CNG fueling station in 2007 are not due to migration through groundwater from the former USTs to the northeast of the CNG fueling station (former Harbor Facilities USTs). The former USTs are not the source of these hydrocarbons because:

- Groundwater samples from borings CNG-B1 and CNG-B2, located along the northern site boundary between these former USTs and the CNG fueling station, did not contain TPH-G and BTEX above reporting limits. Although low concentrations of TPH-D were detected, the chromatogram for one sample did not match the diesel standard.

- Almost no BTEX were detected in the groundwater samples from borings CNG-B3 and CNG-B4, located within the footprint of the former National Ice engine room, above the method detection limit of 0.1 µg/L. In contrast, groundwater samples collected in January 2014 from near the Harbor Facilities USTs yielded maximum concentration of 10,000 µg/L benzene, 38,000 µg/L toluene, 6,800 µg/L toluene, and 26,000 µg/L xylenes (ERM, 2014). Moreover, the TPH-G detections in the CNG-B3 and CNG-B4 samples appear to not be due to gasoline because of the lack of BTEX detected and the chromatograms do not match the gasoline standard.
- The analytical data for soil suggest that the hydrocarbons detected in the groundwater samples from borings CNG-B3 and CNG-B4 appear more likely from a near-surface source. The soil results from the remedial excavation and borings CNG-B3 and CNG-B4 indicate that TPH-D, TPH-MO and PAH concentrations generally decline with increasing depth.

The investigation results do not rule out that the former engine room and/or former 60-hp motor room may be the hydrocarbon source. The highest TPH-D and TPH-MO results for soil were from samples collected at one-foot bgs in the former engine room. The chromatograms for the TPH-MO results are consistent with the laboratory's motor oil standard, and it is likely that National Ice used motor oils in these rooms. Although PAHs are associated with motor oil, the PAH detections in soil samples from all four borings may also be a result of off-site sources as documented by PG&E.

The extent of petroleum hydrocarbons remaining near the former engine room and 60-hp motor room is likely limited to soil and groundwater immediately within this area of the site. The residual TPH is predominately hydrocarbons in the TPH-D and TPH-MO ranges and thus are relatively immobile. BTEX and VOCs are not present, or are present at low concentrations below ESLs. Low concentrations of PAHs were detected, but the concentrations are consistent with data for surface soil in the site vicinity.

Based on the results of this investigation, Weiss recommends that the Port submit a case closure request for the CNG fueling station site. Residual TPH in soil and groundwater appears to be primarily from on-site activities conducted by National Ice over 50 years ago. No VOCs or individual PAHs in soil samples from this investigation exceed ESLs; PAHs in two groundwater samples exceed the ESLs. PAHs are highly insoluble and the detected concentrations in groundwater are likely caused by PAHs sorbed to suspended solids in the grab groundwater samples and therefore may not be representative of dissolved concentrations. The residual hydrocarbons do not present a risk to groundwater as a resource and are not present at concentrations that indicate the presence of free product. Although two of the groundwater samples contained TPH above ESLs, these particular ESLs are based on aquatic toxicity and nuisance conditions, neither of which is a concern because the site is not adjacent to aquatic receptors and is in a highly industrial area. Approximately 200 cubic yards of soil have been removed from the source area, and the site is paved, which assists in preventing rainfall infiltration and direct contact with soil. Future contact with residual hydrocarbons in soil can be managed using institutional controls.

LIMITATIONS

Weiss Associates' work at the Port of Oakland CNG Fueling Station in Oakland, California, was conducted under my supervision. To the best of my knowledge, the data contained herein are true and accurate, based on what can be reasonably understood as a result of this project while satisfying the scope of work prescribed by the client for this project. The data, findings, recommendations, specifications, and/or professional opinions were prepared solely for the use of the Port of Oakland in accordance with generally accepted professional engineering and geologic practice. We make no other warranty, either expressed or implied, and are not responsible for the interpretation by others of the contents herein.

I trust this report meets the Port's needs Please let me know if you have any questions or comments.

Sincerely,
Weiss Associates

Analytical Laboratory: Curtis & Tompkins, Ltd.

Analytical Methods Used:

TPH-Gasoline, TPH-Diesel and TPH-Motor Oil by USEPA Method 8015B

Benzene, Ethylbenzene, Xylenes, Toluene and MTBE by USEPA Method 8260B

^a ESL for shallow soil; groundwater is NOT a current or potential drinking water resource, commercial/industrial land use; from December 2013 Table B-2.

BOLD results are above ESLs.

Abbreviations:

ESL - Environmental Screening Level

TPH - total petroleum hydrocarbons

feet bgs - feet below ground surface

U - not detected at the reporting limit; trace amounts of hydrocarbons were detected in the method blank for subsequent sample batches

J - data qualified as estimated; result was between the method detection limit and reporting limit

USEPA - United States Environmental Protection Agency

mg/kg - milligrams per kilogram

Y - chromatographic pattern for hydrocarbons did not resemble the standard

MTBE - methyl tert-butyl ether

<n - not detected above the method detection limit

SGCU - silica gel cleanup

		PAID IN FULL

Works Requesting Permits:

Borehole(s) for Investigation-Environmental/Monitorinig Study - 5 Boreholes

Driller: Gregg Drilling & Testing - Lic #: 485165 - Method: hstem

Work Total: \$265.00

Specifications

Permit Number	Issued Dt	Expire Dt	# Boreholes	Hole Diam	Max Depth
W2014-1142	11/26/2014	03/11/2015	5	4.00 in.	20.00 ft

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
5. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
6. NOTE:

Alameda County Public Works Agency - Water Resources Well Permit

Under California laws, the owner/operator are responsible for reporting the contamination to the governmental regulatory agencies under Section 25295(a). The owner/operator is liable for civil penalties under Section 25299(a)(4) and criminal penalties under Section 25299(d) for failure to report a leak. The owner/operator is liable for civil penalties under Section 25299(b)(4) for knowing failure to ensure compliance with the law by the operator. These penalty provisions do not apply to a potential buyer.

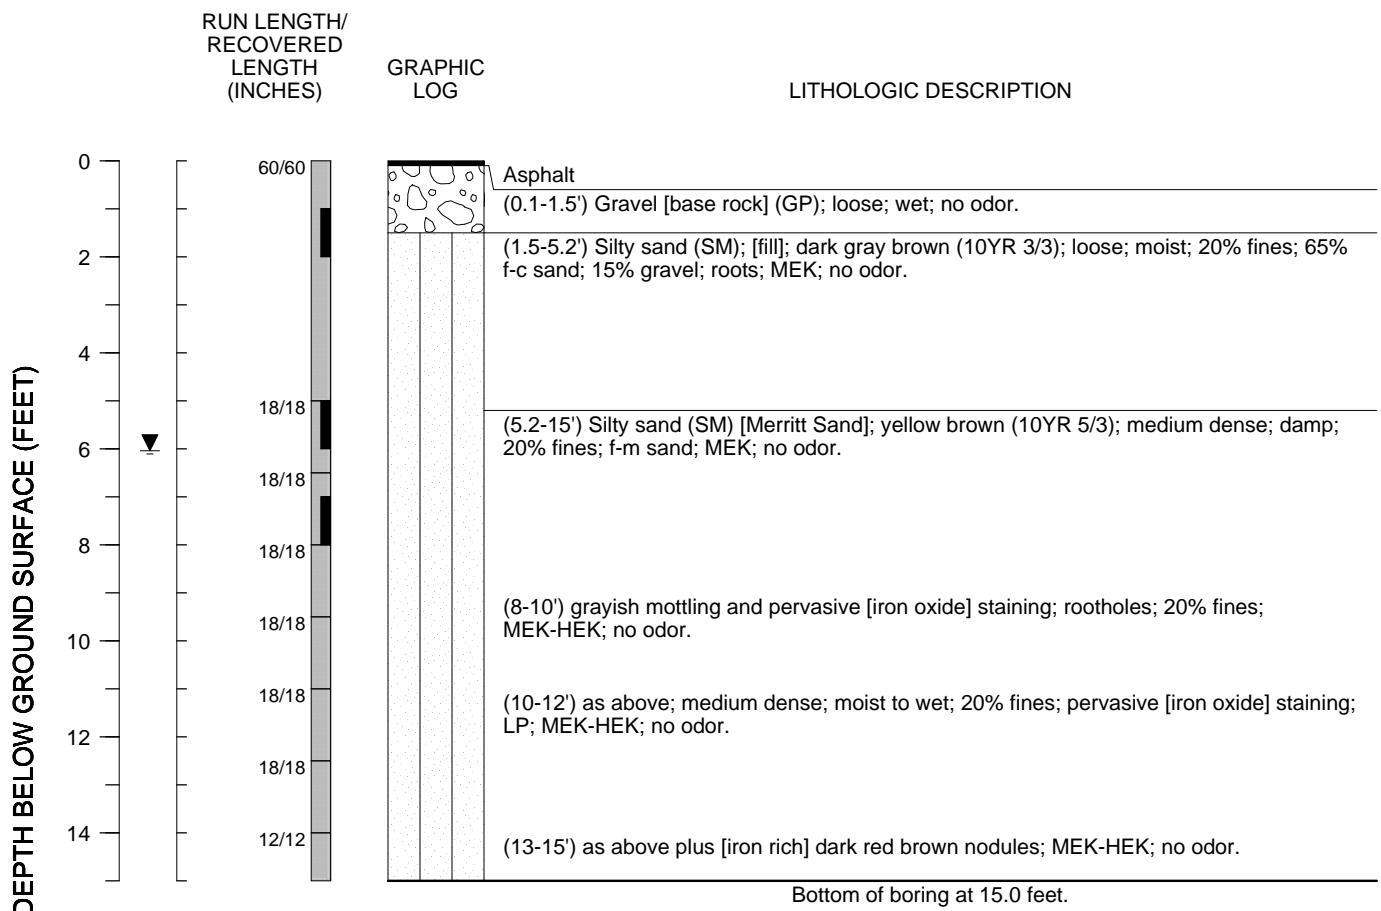

7. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.
 8. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.
-

BORING LOGS

BORING CNG-B1

PAGE 1 OF 1

EXPLANATION

Abbreviations:

bgs = below ground surface
c = coarse grained
f = fine grained
HEK = high estimated hydraulic conductivity
LEK = low estimated hydraulic conductivity
LP = low plasticity
m = medium grained
MEK = medium estimated hydraulic conductivity

Notes:

1. Hand augered to 5'
2. Sampling conducted with a 2.5" California Modified Split Spoon Sampler
3. PID readings are not posted; suspect due to high ambient moisture levels during heavy rainfall while drilling. PID reading gradually climbing indicating false positive from moisture in samples.
4. Grab groundwater sample CNG-B1-W collected from 2" ID prepack filter screen set from 10 to 15 ft bgs
5. Boring grouted with hydrated bentonite chips

CASE NARRATIVE

Laboratory number: **263327**
Client: **Weiss Associates**
Project: **259-1971.15**
Location: **Port Oak CNG**
Request Date: **12/12/14**
Samples Received: **12/12/14**

This data package contains sample and QC results for six soil samples and three water samples, requested for the above referenced project on 12/12/14. The samples were received on ice and intact, directly from the field. This report was revised and reissued on 1/8/2015 to include pre and post silica gel cleanup, as well as to report all soil results on dry weight basis.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Water:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 218517; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

Matrix spikes were not performed for this analysis in batch 218534 due to insufficient sample amount. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:

Diesel C10-C24 was detected between the MDL and the RL in the method blank for batch 218565; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:

Acetone was detected between the MDL and the RL in the method blanks for batch 218687; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:

Matrix spikes were not performed for this analysis in batch 218622 due to insufficient sample amount. High surrogate recoveries were observed for dibromofluoromethane in CNG-B2-7' (lab # 263327-007), the method blank for batch 218580, and the method blank for batch 218622; no target analytes were detected at or above RL in these samples. High surrogate recoveries were observed for 1,2-dichloroethane-d4 in CNG-B2-7' (lab # 263327-007) and the method blank for batch 218580; no target analytes were detected at or above RL in these samples. Acetone and 1,2,3-trichlorobenzene were detected between the MDL and the RL in the method blank for batch 218624; these analytes were not detected in the sample at or above the RL. Acetone was detected between the MDL and the RL in the method blank for batch 218580 and the method blank

CASE NARRATIVE

Laboratory number: **263327**
Client: **Weiss Associates**
Project: **259-1971.15**
Location: **Port Oak CNG**
Request Date: **12/12/14**
Samples Received: **12/12/14**

Volatile Organics by GC/MS (EPA 8260B) Soil:

for batch 218622; this analyte was not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in CNG-B1-7' (lab # 263327-003) and CNG-B2-1' (lab # 263327-005); this analyte is a common laboratory contaminant. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:

No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:

Matrix spikes QC770224, QC770225 (batch 218609) were not reported because the parent sample required a dilution that would have diluted out the spikes. CNG-B1-1' (lab # 263327-001) and CNG-B2-1' (lab # 263327-005) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

High recovery was observed for chromium in the MS for batch 218574; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):

No analytical problems were encountered.

Subject: Re: 259-1971.15 - C&T Login Summary (263387) *** Confirm project number

Please confirm project number as this COC reads 259-1971.15 and the previous two COC read 259-1971-15. Please me know which is the correct project number so all CNG jobs are in the same project. Also, please advise on metals analysis for IDW-W01-01 (263387-004) as no metals container was received. Thank you~ Isabelle

Subject: RE: INVOICE 259-1971.15 - C&T Data (263387)
From: Diane Heinze <dheinze@portoakland.com>
Date: 12/31/2014 10:51 AM
To: "isabelle.choy@ctberk.com" <isabelle.choy@ctberk.com>
CC: Lydia Huang <lydia@baseline-env.com>, "Joyce E. Adams" <jea@weiss.com>

Hi Isabelle,

The workplan for this project states that all soil and groundwater TPH extractable samples will be analyzed with and without silica gel cleanup. As we discussed, since all TPH extractable samples were analyzed without silica gel cleanup, please re-run all extracts from soil and groundwater (40 day holding time) with silica gel cleanup. Please contact me at 510-627-1759 if the extracts are unavailable.

Thanks,
Diane

COOLER RECEIPT CHECKLIST

Curtis & Tompkins, Ltd.

Login # 263327 Date Received 12/12/14 Number of coolers _____
 Client Weiss Associates Project 259-1971-15

Date Opened 12/12 By (print) SC (sign) John Hart
 Date Logged in 12/15 By (print) MC (sign) CP

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? _____ YES NO

4. Were custody papers filled out properly (ink, signed, etc)? _____ YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) _____ YES NO

6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: Wet Blue/Gel None Temp(°C) _____

Samples Received on ice & cold without a temperature blank; temp. taken with IR gun

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? _____ YES NO
 If YES, what time were they transferred to freezer? 1615

9. Did all bottles arrive unbroken/unopened? _____ YES NO

10. Are there any missing / extra samples? _____ YES NO

11. Are samples in the appropriate containers for indicated tests? _____ YES NO

12. Are sample labels present, in good condition and complete? _____ YES NO

13. Do the sample labels agree with custody papers? _____ YES NO

14. Was sufficient amount of sample sent for tests requested? _____ YES NO

15. Are the samples appropriately preserved? _____ YES NO N/A

16. Did you check preservatives for all bottles for each sample? _____ YES NO N/A

17. Did you document your preservative check? _____ YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? _____ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? _____ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? _____ YES NO N/A

21. Was the client contacted concerning this sample delivery? _____ YES NO

If YES, Who was called? _____ By _____ Date: _____

COMMENTS

20.) Bubbles present in 1/1 VOA Sample 9 (Trip Ø)

Curtis & Tompkins, Ltd.

Detections Summary for 263327

Results for any subcontracted analyses are not included in this summary.

Client : Weiss Associates
Project : 259-1971.15

CASE NARRATIVE

Laboratory number: **263357**
Client: **Weiss Associates**
Project: **259-1971.15**
Location: **Port Oak CNG**
Request Date: **12/15/14**
Samples Received: **12/15/14**

This data package contains sample and QC results for eight soil samples and three water samples, requested for the above referenced project on 12/15/14. The samples were received cold and intact. This report was revised and reissued on 1/8/2015 to include pre and post silica gel cleanup, as well as to report all soil results on dry weight basis.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Water:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 218584. No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

Matrix spikes were not performed for this analysis in batch 218581 due to insufficient sample amount. Low surrogate recovery was observed for bromofluorobenzene (FID) in CNG-B4-1B (lab # 263357-002), due to matrix interference. High surrogate recovery was also observed for bromofluorobenzene (FID) in CNG-B3-7' (lab # 263357-008), due to matrix interference, due to interference from coeluting hydrocarbon peaks. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 218581; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:

Diesel C10-C24 and motor oil C24-C36 were detected between the MDL and the RL in the method blank for batch 218709; these analytes were either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. CNG-B4-1A (lab # 263357-001), CNG-B4-1B (lab # 263357-002), and CNG-B3-1' (lab # 263357-006) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:

Naphthalene was detected between the MDL and the RL in the method blank for batch 218729; this analyte was not detected in samples at or above the RL. CNG-B3-W (lab # 263357-011) had pH greater than 2. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:

Matrix spikes were not performed for this analysis in batch 218622 due to

CASE NARRATIVE

Laboratory number: **263357**
Client: **Weiss Associates**
Project: **259-1971.15**
Location: **Port Oak CNG**
Request Date: **12/15/14**
Samples Received: **12/15/14**

Volatile Organics by GC/MS (EPA 8260B) Soil:

insufficient sample amount. High surrogate recoveries were observed for 1,2-dichloroethane-d4 in CNG-B4-1B (lab # 263357-002) and CNG-B3-1' (lab # 263357-006); no target analytes were detected at or above RL in these samples. High surrogate recoveries were observed for dibromofluoromethane in CNG-B4-1B (lab # 263357-002), CNG-B3-1' (lab # 263357-006), and the method blank for batch 218622; no target analytes were detected at or above RL in these samples. High surrogate recoveries were observed for toluene-d8 in the method blank for batch 218730 and the method blank for batch 218754; no target analytes were detected in these samples. Acetone was detected between the MDL and the RL in the method blank for batch 218622; this analyte was not detected in samples at or above the RL. CNG-B3-7' (lab # 263357-008) was diluted due to high hydrocarbons. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:

No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:

Matrix spikes QC770224, QC770225 (batch 218609) were not reported because the parent sample required a dilution that would have diluted out the spikes. CNG-B4-1A (lab # 263357-001) and CNG-B3-1' (lab # 263357-006) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

High recoveries were observed for barium and zinc in the MS/MSD of CNG-B4-1A (lab # 263357-001); the BS/BSD were within limits, and the associated RPDs were within limits. Chromium and zinc were detected between the MDL and the RL in the method blank for batch 218655; these analytes were detected in samples at a level at least 10 times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):

No analytical problems were encountered.

Subject: Re: 259-1971.15 - C&T Login Summary (263387) *** Confirm project number

Please confirm project number as this COC reads 259-1971.15 and the previous two COC read 259-1971-15. Please me know which is the correct project number so all CNG jobs are in the same project. Also, please advise on metals analysis for IDW-W01-01 (263387-004) as no metals container was received. Thank you~ Isabelle

RE: INVOICE 259-1971.15 - C&T Data (263387)

Subject: RE: INVOICE 259-1971.15 - C&T Data (263387)
From: Diane Heinze <dheinze@portoakland.com>
Date: 12/31/2014 10:51 AM
To: "isabelle.choy@ctberk.com" <isabelle.choy@ctberk.com>
CC: Lydia Huang <lydia@baseline-env.com>, "Joyce E. Adams" <jea@weiss.com>

Hi Isabelle,

The workplan for this project states that all soil and groundwater TPH extractable samples will be analyzed with and without silica gel cleanup. As we discussed, since all TPH extractable samples were analyzed without silica gel cleanup, please re-run all extracts from soil and groundwater (40 day holding time) with silica gel cleanup. Please contact me at 510-627-1759 if the extracts are unavailable.

Thanks,
Diane

COOLER RECEIPT CHECKLIST

Login # 263357 Date Received 12/15/14 Number of coolers 1
 Client WEISS Project Port OAK CNG

Date Opened 12/16 By (print) SC (sign) John Smith
 Date Logged in 12/16 By (print) MC (sign) Chris

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? YES NO

4. Were custody papers filled out properly (ink, signed, etc)? YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: Wet Blue/Gel None Temp(°C) 2-4

Samples Received on ice & cold without a temperature blank; temp. taken with IR gun

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES NO
 If YES, what time were they transferred to freezer? 1730

9. Did all bottles arrive unbroken/unopened? YES NO

10. Are there any missing / extra samples? YES NO

11. Are samples in the appropriate containers for indicated tests? YES NO

12. Are sample labels present, in good condition and complete? YES NO

13. Do the sample labels agree with custody papers? YES NO

14. Was sufficient amount of sample sent for tests requested? YES NO

15. Are the samples appropriately preserved? YES NO N/A

16. Did you check preservatives for all bottles for each sample? YES NO N/A

17. Did you document your preservative check? YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? YES NO N/A

21. Was the client contacted concerning this sample delivery? YES NO

If YES, Who was called? _____ By _____ Date: _____

COMMENTS

20) Bubbles present in 1/2 VOA for sample 9 (Trip Blanks)

Curtis & Tompkins, Ltd.

Detections Summary for 263357

Results for any subcontracted analyses are not included in this summary.

Client : Weiss Associates
Project : 259-1971.15
Location : Port Oak CNG

Client Sample ID : CNG-B4-1A

CASE NARRATIVE

Laboratory number: **263387**
Client: **Weiss Associates**
Project: **259-1971.15**
Location: **CNG Fueling Station, Oakland**
Request Date: **12/16/14**
Samples Received: **12/16/14**

This data package contains sample and QC results for three soil samples and two water samples, requested for the above referenced project on 12/16/14. The samples were received on ice and intact, directly from the field. This report was revised and reissued on 1/8/2015 to include pre and post silica gel cleanup, as well as to report all soil results on dry weight basis.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Water:

No analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 218773 and the method blank for batch 218861; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:

Diesel C10-C24 and motor oil C24-C36 were detected between the MDL and the RL in the method blank for batch 218709; these analytes were detected in samples at a level at least 10 times that of the blank. IDW-S01-01 (lab # 263387-001) and CNG-B5-1 (lab # 263387-003) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:

Bromomethane was detected above the RL in the method blank for batch 218727; this analyte was not detected in samples at or above the RL. Acetone was detected between the MDL and the RL in the method blank for batch 218727; this analyte was not detected in samples at or above the RL. IDW-W01-01 (lab # 263387-004) was diluted due to foaming. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:

High surrogate recoveries were observed for toluene-d8 in IDW-S01-01 (lab # 263387-001) and the method blank for batch 218754. High surrogate recovery was observed for 1,2-dichloroethane-d4 in IDW-S01-01 (lab # 263387-001). IDW-S01-02 (lab # 263387-002) was diluted due to high hydrocarbons. No other analytical problems were encountered.

CASE NARRATIVE

Laboratory number: **263387**
Client: **Weiss Associates**
Project: **259-1971.15**
Location: **CNG Fueling Station, Oakland**
Request Date: **12/16/14**
Samples Received: **12/16/14**

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:

No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:

Matrix spikes QC770224, QC770225 (batch 218609) were not reported because the parent sample required a dilution that would have diluted out the spikes. IDW-S01-01 (lab # 263387-001) and CNG-B5-1 (lab # 263387-003) were diluted due to the dark and viscous nature of the sample extracts. IDW-S01-02 (lab # 263387-002) was diluted due to high non-target analytes. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:

No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:

Low recoveries were observed for lead in the MS/MSD for batch 218758; the parent sample was not a project sample, and the BS/BSD were within limits. High recovery was observed for nickel in the MSD for batch 218758; the BS/BSD were within limits, and the associated RPD was within limits. High RPD was observed for lead in the MS/MSD for batch 218758; the RPD was acceptable in the BS/BSD. Chromium and zinc were detected between the MDL and the RL in the method blank for batch 218758; these analytes were detected in samples at a level at least 10 times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):

No analytical problems were encountered.

Please confirm project number as this COC reads 259-1971.15 and the previous two COC read 259-1971-15. Please me know which is the correct project number so all CNG jobs are in the same project. Also, please advise on metals analysis for IDW-W01-01 (263387-004) as no metals container was received. Thank you~ Isabelle

RE: INVOICE 259-1971.15 - C&T Data (263387)

Subject: RE: INVOICE 259-1971.15 - C&T Data (263387)
From: Diane Heinze <dheinze@portoakland.com>
Date: 12/31/2014 10:51 AM
To: "isabelle.choy@ctberk.com" <isabelle.choy@ctberk.com>
CC: Lydia Huang <lydia@baseline-env.com>, "Joyce E. Adams" <jea@weiss.com>

Hi Isabelle,

The workplan for this project states that all soil and groundwater TPH extractable samples will be analyzed with and without silica gel cleanup. As we discussed, since all TPH extractable samples were analyzed without silica gel cleanup, please re-run all extracts from soil and groundwater (40 day holding time) with silica gel cleanup. Please contact me at 510-627-1759 if the extracts are unavailable.

Thanks,
Diane

Isabelle,

Please run total metals using one of the 500 ml ambers submitted.

The job number for all 3 COCs should be 259-1971.15

Feel free to call me if you have any questions, or if you need additional volume if the first metals extraction does not work.

Thanks,

James Welles
510 450 6103

>>> "Isabelle Choy" <isabelle.choy@ctberk.com> 12/17/2014 4:19 pm >>>

Please confirm project number as this COC reads 259-1971.15 and the previous two COC read 259-1971-15. Please me know which is the correct project number so all CNG jobs are in the same project. Also, please advise on metals analysis for IDW-W01-01 (263387-004) as no metals container was received. Thank you~ Isabelle

 Client Noesis Associates Project 259-1971.15

Date Opened 12/16 By (print) 4V (sign) John Lat
 Date Logged in 12/17 By (print) MC (sign) John

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
- Shipping info _____
- 2A. Were custody seals present? YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____
- 2B. Were custody seals intact upon arrival? _____ YES NO N/A
3. Were custody papers dry and intact when received? _____ YES NO
4. Were custody papers filled out properly (ink, signed, etc)? _____ YES NO m.2/17
5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO
6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: Wet Blue/Gel None Temp(°C) _____

Samples Received on ice & cold without a temperature blank; temp. taken with IR gun

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES NO
 If YES, what time were they transferred to freezer? 1815
9. Did all bottles arrive unbroken/unopened? YES NO
10. Are there any missing / extra samples? YES NO
11. Are samples in the appropriate containers for indicated tests? YES NO
12. Are sample labels present, in good condition and complete? YES NO
13. Do the sample labels agree with custody papers? YES NO
14. Was sufficient amount of sample sent for tests requested? YES NO
15. Are the samples appropriately preserved? YES NO N/A
16. Did you check preservatives for all bottles for each sample? YES NO N/A
17. Did you document your preservative check? YES NO N/A
18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO N/A
19. Did you change the hold time in LIMS for preserved terracores? YES NO N/A
20. Are bubbles > 6mm absent in VOA samples? YES NO N/A
21. Was the client contacted concerning this sample delivery? YES NO
 If YES, Who was called? _____ By _____ Date: _____

COMMENTS

CASE NARRATIVE

Laboratory number: **263539**
Client: **Weiss Associates**
Project: **259-1971.15**
Location: **Port Oak CNG**
Request Date: **12/23/14**
Samples Received: **12/12/14, 12/15/14, 12/16/14**

This data package contains sample and QC results for seventeen soil samples, requested for the above referenced project on 12/23/14. The samples were received cold and intact.

Hexavalent Chromium (EPA 7196A):

No analytical problems were encountered.

Hexavalent Chromium Analysis for CNG Fueling Station

Subject: Hexavalent Chromium Analysis for CNG Fueling Station
From: "James Welles" <jtw@weiss.com>
Date: 12/23/2014 3:39 PM
To: <isabelle.choy@ctberk.com>

263539

Hi Isabelle,

as per our phone discussion I would like all CNG Fueling Station (259-1971.15) soil samples analyzed for hexavalent chromium.

A separate report with just the hex chrome data is fine as we discussed, no need to revise already issued reports. This can be billed directly to Diane Heinze at Port of Oakland as were the rest of the analyses for this job.

Feel free to call me with any further questions.

Thanks and happy holidays,

-James
510 450 6103

Login # 263327 Date Received 12/12/14 Number of coolers _____
 Client Weiss Associates Project 259-1971-15

Date Opened 12/12 By (print) SC (sign) John
 Date Logged in 12/15 By (print) MC (sign) Op

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? YES NO

4. Were custody papers filled out properly (ink, signed, etc)? YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: Wet Blue/Gel None Temp(°C) _____

Samples Received on ice & cold without a temperature blank; temp. taken with IR gun

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES NO
 If YES, what time were they transferred to freezer? 1615

9. Did all bottles arrive unbroken/unopened? YES NO

10. Are there any missing / extra samples? YES NO

11. Are samples in the appropriate containers for indicated tests? YES NO

12. Are sample labels present, in good condition and complete? YES NO

13. Do the sample labels agree with custody papers? YES NO

14. Was sufficient amount of sample sent for tests requested? YES NO

15. Are the samples appropriately preserved? YES NO N/A

16. Did you check preservatives for all bottles for each sample? YES NO N/A

17. Did you document your preservative check? YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? YES NO N/A

21. Was the client contacted concerning this sample delivery? YES NO

If YES, Who was called? _____ By _____ Date: _____

COMMENTS

20.) Bubbles present in 1/1 VOA Sample 9 (Trip Ⓢ)

 Date Logged in 12/16 By (print) MC (sign) Chris

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? _____ YES NO

4. Were custody papers filled out properly (ink, signed, etc)? _____ YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) _____ YES NO

6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: Wet Blue/Gel None Temp(°C) 2-4

Samples Received on ice & cold without a temperature blank; temp. taken with IR gun

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? _____ YES NO

If YES, what time were they transferred to freezer? 1730

9. Did all bottles arrive unbroken/unopened? _____ YES NO

10. Are there any missing / extra samples? _____ YES NO

11. Are samples in the appropriate containers for indicated tests? _____ YES NO

12. Are sample labels present, in good condition and complete? _____ YES NO

13. Do the sample labels agree with custody papers? _____ YES NO

14. Was sufficient amount of sample sent for tests requested? _____ YES NO

15. Are the samples appropriately preserved? _____ YES NO N/A

16. Did you check preservatives for all bottles for each sample? _____ YES NO N/A

17. Did you document your preservative check? _____ YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? _____ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? _____ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? _____ YES NO N/A

21. Was the client contacted concerning this sample delivery? _____ YES NO

If YES, Who was called? _____ By _____ Date: _____

COMMENTS

20.) Bubbles present in 1/2 VOA for sample 9 (Trip Blanks)

Subject: Re: 259-1971.15 - C&T Login Summary (263387) *** Confirm project number
From: "James Welles" <jtw@weiss.com>
Date: 12/17/2014 5:04 PM
To: <isabelle.choy@ctberk.com>

Isabelle,

Please run total metals using one of the 500 ml ambers submitted.

The job number for all 3 COCs should be 259-1971.15

Feel free to call me if you have any questions, or if you need additional volume if the first metals extraction does not work.

Thanks,

James Welles
510 450 6103

>>> "Isabelle Choy" <isabelle.choy@ctberk.com> 12/17/2014 4:19 pm >>>

Please confirm project number as this COC reads 259-1971.15 and the previous two COC read 259-1971-15. Please me know which is the correct project number so all CNG jobs are in the same project. Also, please advise on metals analysis for IDW-W01-01 (263387-004) as no metals container was received. Thank you~ Isabelle

DATA VALIDATION/QUALITY CONTROL SUMMARY

The following provides a summary of Weiss's data validation and quality control results from the laboratory:

- All sample hold times and method preservation requirements were met.
- All travel blanks were free of contamination.
- Surrogate recovery was high in several volatile organic analysis samples. However, because there were no detections of associated analytes in the field samples, no qualifications were assigned.
- Matrix spikes were not performed for some analytical methods used for this delivery group.
- Matrix spike recovery of zinc was above laboratory limits. Thus, three zinc results are qualified as estimated as indicated with a "J".
- 109 sample results are between the reporting limit and the method detection limit defined as trace concentrations and the reported concentrations are estimated, as indicated with a "J".
- Trace concentrations of hydrocarbons were detected in the method blanks for various batches. Thus, 20 results for samples in these batches were qualified with a "U", indicating that each result was not detected above an elevated reporting limit.
- Thirty chromatograms exhibited patterns that did not resemble the laboratory standard for gasoline or diesel. The reported concentrations are qualified as estimated and noted with a "Y".
- Field duplicates were collected for soil. Several analytes were detected at trace concentrations and not detected in the associated duplicate sample due to suspected sample heterogeneity within this sample.
- A groundwater field duplicate sample and a rinseate blank were scheduled to be collected from boring CNG-B5, however, due to refusal in that boring, these samples could not be collected.
