Russ,

Please move forward with a work plan to define the extent of contamination and excavate contaminated soil. If screening is conducted as part of the initial characterization, the results must be confirmed by confirmation sampling and certified laboratory data. The excavation must be conducted by workers with the proper training including 40-hour HAZWOPER training. Please submit the Work Plan by June 16, 2008.

Hello Mr. Wickham,

This email is regarding the method of remediation at the property located at 414 Beverly Street, Livermore, CA; specifically the removal of the contaminate soil. John Rigter and I had briefly discussed a possible plan of incorporating my services to characterize and defining the extent of the contamination, marking a very clear boundary so Mr. Alamilla (with additional workers/assistance) could then excavate, store and remove the soil under the supervision of AEI Consultants and your department.

Mr. Alamilla had approved of this plan (as it would lower the cost) and I will proceed in that direction upon your approval. If not, I will proceed in a different manner. Thank you for your time concerning this matter,

Russ Bartlett
