Thanks Mark,

I appreciate the help. Yeah, this one doesn't deal with any problems under about 3 feet. They are going to deal with those potentials during excavation for the parking garage.

Nick

Hi Nick,

Normally the consultant submits the report, but the county has a perjury statement cover sheet that's required to be signed by the RP (basically stating they haven't had you tell fibs – or “unduly influenced the work product recommendations and conclusions”...). But the RP can submit, and the perjury statement would still be required. It's also submitted as a PDF to the county's ftp website. See the attachments to any of our letters for more details. Hopefully the report will discuss any potential signs of contamination from deeper excavations (petroleum contam was a potential issue detailed in a soil and groundwater management plan), but if that wasn't part of your contract then it'll come back to the RP to cover that I guess.

**Subject:** Ambassador

Hi Mark

My company, Adanta Inc. has been working on the Ambassador project in Emeryville. I think that you are probably familiar with the project. Recently we observed the excavation and removal of lead-contaminated soil from the site and have written a report.

What is the protocol from here? Should we send you the report, or should I have RCD send you the report, or what exactly should we do to see if the site is ready for County closure? I am sorry for the level of inexperience I am showing here.

Thank You  
Nick Patz
