Mark,

Approximately 100 gallons of grout was pumped into the well while the County Public Works observed. Apparently either the grout took up the water or the water was pushed back into the formation as the grout was entering the well. The only water pumped out of the top of the grout was about 20 gallons that Cascade used to mix the concrete to finish off the last portion of the abandonment. Nothing was left onsite, and no free water was removed from the site. Steve Miller of PW was on site his cell is 510 714-0406. Dan Hidalgo PG of Adanta was onsite his cell is 831 359-8190.

Subject: Ambassador Laundry (RO2973); Documentation of Waste Removal

Jessica,

I've had a chance to review the well destruction report, and in general it looks fine; however, one of the items that the Low-Threat Closure Policy requires is documentation of waste removal after well destruction. It may not be available yet, but I do want to request that a copy be forwarded at the time it is available. This is one of the items that can hold up receipt of final closure documents. I will also be attempting to review the Site Management Plan as planned before the end of our FY, and putting the final touches on the closure summary package, but have not been able to due to multiple conflicting demands that will continue until about June 30th. Hopefully these slight delays will not be a significant issue to your lender, closure is nearing for the site.
