Alameda County  
Environmental Health

Dear Mr. Oliva:

Re: Groundwater Monitoring Test Results for EBMUD's Underground Storage Tanks at the Water Pollution Control Plant

East Bay Municipal Utility District owns and operates two single-walled underground storage tanks (SWUGTs) in Alameda County which are monitored by groundwater analysis of monitoring wells.

The District has three monitoring wells in the immediate vicinity of these two SWUGTs. Groundwater samples are taken monthly for visual and odor observation and are analyzed in the laboratory once a quarter (4x/yr) for EPA 8015, Total Petroleum Hydrocarbon (TPH-diesel and TPH-gasoline) and EPA 8020, Aromatic Hydrocarbons (BTEX).

To date, no detectable levels of TPH as diesel, TPH as gasoline and BTEX have been found in any of the samples at the three monitoring wells. Laboratory results for the quarter beginning January 1, 1992 are attached. Results for prior years are on file and will be sent upon request. All results indicate below detection limit.

Annual precision testing is a required part of this monitoring method. These two SWUGTs were last tested for tightness on June 8, 1992. Both tanks tested "tight". The results were sent to Alameda County on September 3, 1992.

Enclosed are the monitoring well test results for the following facility:

<u>Facility</u>	<u>Address</u>	<u>No. of tanks</u>
Water Pollution Control Pl	2020 Wake Ave. Oakland, CA	1-15,000 gal diesel 1- 2,000 gal slop oil
