

6/15/2016 Phone Log- RO2981 Red Hanger Kleaners, 6235-6239 College Ave., Oakland

Duration: Approximately 10 minutes

Received a phone call from Paul King regarding case status. Mr. King said the soil vapor extraction system has been operating since last Friday and is doing OK. He said the shallow wells (shallow due to encountering large cobbles) are experiencing good air flow.

Drums in the former dry cleaner suite will be removed by June 16th, and the suite will be cleaned up for dust and debris.

Mr. King said he spoke with Mr. Patten and indicated Mr. Patten is happy with the air purifying unit for his suite. Mr. King also said he has had positive feedback from some of the occupants for the work he has been doing at the site- they appreciate the hard work he's doing to address site issues.

Mr. King said the most recent Fact Sheet was not distributed to the 323 63rd St. address and that they will be mailed out, with a copy also mailed to me. I mentioned that with SVE system startup a new Fact Sheet should be in the works outlining the indoor air sampling schedule. He indicated it was in the works.
