Duration: 0 hours

Phone call with John Kortrum of Archer Norris. A Work Plan for additional investigation is due February 23. They believe that contamination is entering their site from the Glovatorium site. He requested that I amend the order to not include groundwater monitoring wells near the northern wall of their building. Easier access would be available on the Glovatorium site in alley way outside wall. They were not given access to that area by Glovatorium owner. I indicated that I could not comment on the likelihood of off-site contamination without review of the case file. They would need to provide supporting information to show that the source of contamination in the direct push borings near wall is not from their site in order for me to review this. They are planning to submit a Work Plan for work on their site and may submit additional information regarding potential off-site sources. Upon review of the Work Plan, I would provide some indication as to whether the proposed scope of work is adequate or whether additional work is needed near the northern wall.
