Hi Paresh-

Thanks for sending the attached letter. I spoke to our client and at this point, we may not need a more definitive letter for the lender.

However, he is very keen on collecting the next round of samples, and if the results are similar, to obtain site closure as we discussed

To this end, I wanted to confirm my interpretation of the ACEH's points in the letter. Specifically, the ACEH is requesting

1) two rounds of vapor sampling reflecting two different seasons. Our interpretation is that we need one more round of vapor sampling in the Spring. Combined with the round we just completed, that provides two rounds collected at two different seasons. Please confirm that will meet the objective indicated in the letter.

2) The letter suggests collecting samples throughout the building; however, in our phone discussions, I understood that you wanted samples within the footprint of the former dry cleaning machine, which by the way contained the highest PCE concentrations in soil vapor. Our intent for the next round is to target only this footprint area via the subslab/soil vapor samples. Please confirm that indeed the focus can be within this footprint.

3) Lastly, your comment letter refers to collecting samples at various times during the day. Can you please clarify this? Our intent was to collect samples one after another in one mobilization.

Please let me know if you prefer to discuss these on the phone and I will contact you accordingly.

Thanks again for your help.

Regards,
Mehrdad
