Mark,

Attached is the revised laboratory report for 5925 Ocean View Dr., with results for MTBE in groundwater (page 6). The results were non-detect for MTBE in water.

Bob,  
From what I can see, it does not look like MTBE was run for the groundwater at this site. Would it be possible for you to recover the data from the lab? We can get into sticky wickets here sometimes without this particular analyte.

Good news, Mark. By the end of the year would be great...and help your books! Since you took the bait, I'll let you run a bit and then reel you in.

Bob,  
Thanks for the prompt, and thanks for dangling the bait. It worked!

I do think the site is closable (this is said with the usual caveat that I need to convince two levels of review of the same, but I don't think there will be an issue). I will need to generate a closure packet, but will need to work the document into my review lineup, so give me a bit of time to do so as we're still within the 60 day review period that is generally allotted for reviews. I'll aim for "by the end of the year" due to the pending holiday season; however, I try to do so sooner.

Mark,

Any estimate on when you'll get a chance to review the October 6, 2010 Investigation Report. The responsible party is also inquiring. Pangea has recommended case close. You can remove this case from the books.
