RE: Soil Investigation, 15725 Railroad Av., San Lorenzo

Dear Ms. Sherman:

Due to a release of diesel fuel sometime prior to March, 1990 from a former above ground tank at your property, you carried out a soil contamination investigation. Suspected contaminated soil was removed, and in October, 1992, confirmatory samples were taken. Sample results indicate that very low levels (less than 2 ppm) of total extractable hydrocarbons were present in the remaining soil.

Based on these low analytical findings and upon other information available to us at this time, this office requires no further investigative or remedial work to be carried out at your site in connection with the above ground storage tank leak.

You may contact me at (510)271-4320 with any questions.

Sincerely,

Pamela J. Evans
Senior Hazardous Materials Specialist
