Duration: 0 hours

Phone call with Jeff Adams of Engeo. They have been working on excavation at site for some time. I indicated I could come out to the site on Tuesday, August 16 in the afternoon to inspect excavations and discuss confirmation sampling. He asked whether case could be closed without soil back in the hole. I indicated that would want to know that contaminated soil from another site was not placed back in the hole but would not be concerned with the compaction of material for geotech purposes. Jeff indicated they expect to place clean imported fill back in the holes without compaction since they will be overexcavating these areas again for geotech reasons.
