Subject: Underground Storage Tank and Soil Remediation  
Activities in Area A, Yerba Buena/East Baybridge  
Center Project Site

Dear Ms. Hugo:

The enclosed report details tank removal and disposal activities, soil sampling procedures, laboratory analysis results, and soil remediation activities. This work was conducted by Levine-Fricke, Inc., on behalf of Catellus Development Corporation, and in accordance with your verbal authorization on October 1, 1993.

The objectives of the work were to remove the underground storage tanks (USTs) and remediate petroleum-affected soil near the USTs so that residual petroleum hydrocarbon concentrations in soil were below cleanup goals established for the Site.

Please call me if you have any questions or comments regarding this report.

Sincerely,

Jenifer Beatty  
Project Hydrogeologist

**UNDERGROUND TANK REMOVAL AND  
SOIL REMEDIATION ACTIVITIES IN AREA A  
YERBA BUENA/EAST BAYBRIDGE CENTER PROJECT SITE  
EMERYVILLE AND OAKLAND, CALIFORNIA**

**1.0 INTRODUCTION**

This report describes activities conducted to remove two fuel underground storage tanks (USTs) and conduct soil remediation activities in Area A of the Yerba Buena/East Baybridge Project Site, located in Emeryville and Oakland, California ("the Site"; Figures 1 and 2). This work was conducted by Levine·Fricke, Inc., on behalf of Catellus Development Corporation, the property owner. The scope of work for soil remediation activities was verbally approved by Ms. Susan Hugo of the Alameda Health Care Services Agency (ACHA) on October 1, 1993.

The objectives of the work were to remove the USTs and remediate petroleum-affected soil near the USTs so that residual petroleum hydrocarbon concentrations in soil were below cleanup goals established for the Site. These cleanup goals are as follows:

- less than 100 parts per million (ppm) total petroleum hydrocarbons (TPH) as diesel (TPHd)
- less than 1,000 ppm oil and grease (O&G)
- a combined concentration of less than 1 ppm benzene, toluene, ethylbenzene, and xylenes (BTEX compounds)

**2.0 UST REMOVAL ACTIVITIES**

Two fuel oil USTs (an approximately 1,500-gallon UST and a 2,000-gallon UST) were discovered on September 24, 1993, during grading activities at the Site. The USTs were removed from the Site on October 1, 1993, under permits from the ACHA and the Emeryville Fire Department. The former UST locations and excavation boundary are shown in Figure 3.

UST removal and soil excavation activities were performed by Trumpp Bros., Inc., of San Jose, California, from October 1 to 9, 1993. A Levine·Fricke field geologist or engineer was

on site to observe UST removal and soil excavation activities, and to collect soil samples from the excavation for chemical analysis.

Ms. Susan Hugo of the ACHA and Mr. Gerald Anthony of the Emeryville Fire Department were also on site to observe UST removal activities.

### 2.1 UST Contents Disposal

When the USTs were discovered, they were observed to be almost full of floating petroleum product and water. The floating product was pumped into a vacuum truck by Evergreen Environmental Services of Newark, California, on September 24, 1993, and transported to its recycling facility. The water was pumped into a vacuum truck by Erickson Environmental, Inc. ("Erickson") of Richmond, California on September 30, 1993, and transported to the Gibson Oil recycling facility in Redwood City, California. The manifests for transporting these fluids are presented in Appendix A.

### 2.2 UST Stabilization, Inspection, and Field Observations

The empty USTs were rendered inert by inserting dry ice to remove organic vapors and oxygen. Explosivity meter readings were taken from both USTs. The USTs were removed after the combustible gas concentration had been reduced to below 15 percent of the Lower Explosive Limit (LEL) by the dry ice (both USTs had LEL percentages of 1% or below).

Excavation activities were conducted using a backhoe. Piping encountered in the excavation was removed along with the USTs. The tops of the USTs were 2 feet below ground surface (bgs) and the bottoms of the USTs were approximately 7 feet bgs. The USTs were adjacent to each other in a east-west orientation and approximately one foot apart (Figure 3).

Soil lithology in the UST excavation consisted of brown gravelly silty fill from the ground surface to 4 feet bgs. This fill was underlain by tan silty clay from 4 to 13 feet bgs, and tan gravelly clay from 13 to 14 feet bgs, the bottom of the excavation. Areas of the silty clay soil were a blue-green color, indicating the presence of petroleum hydrocarbons. Imported UST backfill material was not encountered in the excavation.

After the USTs had been removed, they were inspected. The USTs were constructed of steel with riveted seams. Both USTs were approximately 5 feet in diameter. The 1,500-gallon UST

was 10 feet long and the 2,000-gallon UST was 16 feet long. Heating elements were observed in both USTs. No holes or signs of corrosion were observed in either UST; however, petroleum product was present along the outer walls of the USTs. In addition, field PID measurements indicated the presence of petroleum-affected soil in the excavation floor and sidewalls. Soil remediation activities are discussed in Section 3.0.

On October 1, 1993, Erickson transported the USTs and piping under hazardous waste manifests to its facility in Richmond for disposal. Copies of the manifests are included in Appendix A.

### 2.3 Soil Sampling Beneath the USTs and Analysis

Soil samples were collected using a rubber mallet to drive clean brass tubes into excavated soil contained in the backhoe bucket. The soil samples were labeled and capped with aluminum foil and plastic caps. Samples were stored in a chilled container and transported for analysis to Anametrix, Inc., of San Jose, California, a state-certified laboratory. Samples were transported under chain-of-custody protocol.

As directed by Ms. Hugo, five soil samples were collected for chemical analysis from soil adjacent to and beneath the USTs (SN-8, SE-8, SW-10, TP1-8, and BS-8). One of those samples was collected at a depth of approximately 8 feet bgs in the area between the USTs. The other four samples were collected from the excavation sidewalls, at depths ranging from 8 feet bgs to 10 feet bgs.

### 2.4 Analytical Results for Soil Samples

All soil samples collected from the excavation were submitted to Anametrix, Inc. Samples were analyzed for TPHd using EPA Method 3510, O&G using Standard Method 5520EF, and TPH as gasoline (TPHg) and BTEX using EPA Methods 5030 and 8020.

Concentrations detected in one of the samples (TP1-8) were below cleanup goals. Analytical results for the other four samples indicated TPHd ranging from 87 ppm to 470 ppm, O&G from 1,700 ppm to 3,800 ppm, and BTEX compounds from 0.017 ppm to 0.081 ppm (combined concentration). Laboratory data sheets are presented in Appendix B. Based on these results, additional soil excavation was performed in the vicinity of the USTs.

### **3.0 SOIL REMEDIATION ACTIVITIES**

A total of approximately 2,500 cubic yards of soil was excavated from the vicinity of the USTs and stockpiled on site. Soil excavation continued until residual petroleum hydrocarbon concentrations in soil above ground water were reduced to below cleanup goals established for the Site (Section 1.0), based on soil sampling and analysis results.

#### **3.1 Analytical Results for Soil Samples**

Analytical results for samples collected from excavated soil are presented in Table 1. Analytical results for samples collected from the floor and sidewalls of the completed excavation are presented in Table 2 (see Figure 3 for final sample locations).

As presented in Table 1, chemical concentrations in the excavated soil ranged from 70 ppm to 470 ppm TPHd and 1,100 ppm to 3,800 ppm O&G. Combined BTEX compound concentrations in excavated soils were well below the cleanup goal of 1 ppm. Laboratory certificates are presented in Appendix B.

Eight final sidewall samples (collected at a depth of approximately 8 feet and a frequency of approximately one sample for every 25 linear feet) and five final bottom samples (collected at a depth of approximately 14 feet and a frequency of approximately one sample for every 400 square feet) were collected from the completed excavation. Analytical results for the soil samples collected indicate that cleanup goals for the Site were achieved, with the exception of BS-14, which contained 110 ppm TPHd (10 ppm over the cleanup goal for TPHd). As presented in Table 2, concentrations of TPHd in remaining soil samples ranged from below laboratory detection limits to 29 ppm, and concentrations of O&G ranged from 43 ppm to 430 ppm. With the exception of one sample (BS-14) where xylenes were detected at 0.007 ppm, BTEX compounds were not detected in any of the final samples collected.

#### **3.2 Management of Excavated Soil**

Oil- and diesel-affected soils excavated from the vicinity of the USTs were added to soil stockpiled on site, to be contained under the building parking lot in accordance with Levine·Fricke's March 10, 1992 Containment Plan for the Site (Levine·Fricke 1992).

#### 4.0 SUMMARY AND CONCLUSIONS

Two fuel USTs were removed and disposed of by a licensed hazardous waste transportation company under a hazardous waste manifest. No holes or signs of corrosion were observed in either UST; however, petroleum product was observed along the outer walls of the USTs. Approximately 2,500 cubic yards of petroleum-affected soil were removed from the UST excavation and in the vicinity of the USTs during removal activities.

Soil samples collected from the final excavation floor and sidewalls indicated that affected soils had been excavated to the cleanup goals for the Site. The excavation was backfilled in October 1993 by the on-site grading contractor, in accordance with site development specifications. Results of field density tests conducted during backfilling activities will be presented in the site geotechnical report.

Based on our observation of excavation activities and the results of soil sampling and analysis, it is our opinion that the work was performed in compliance with applicable UST closure requirements.

#### 5.0 RECOMMENDATIONS

On the basis of the soil-quality results presented in this report, we do not recommend any additional remedial work in this area. As discussed with Ms. Hugo at the Site on October 1, 1993, it is not practical to install a monitoring well within 10 feet of the former USTs because of planned building construction in that area. The potential effect of petroleum hydrocarbon-affected soil on shallow ground-water quality in the area of the former USTs will be monitored using other on-site wells.

Upon completion of site development, ground-water monitoring wells that were abandoned in July 1993 in preparation for construction activities will be replaced with new wells, in accordance with Levine·Fricke's "Work Plan for Site Characterization and Remediation Activities to be Conducted in Conjunction with Site Development, Yerba Buena/East Baybridge Project Site," dated April 28, 1993.

One replacement well will be located approximately 275 feet northwest (crossgradient) of the former UST excavation (along the northern edge of the proposed building) and a second well will be installed approximately 325 feet southwest (crossgradient) of the former UST excavation (along the

southern edge of the proposed building). In addition, the ground-water extraction trench located along the western property boundary in Area A is located approximately 400 feet downgradient from the former UST excavation and likely will intercept petroleum-affected shallow ground water, if any.

## Anametrix Laboratories

1961 Concourse Drive  
 Suite E  
 San Jose, CA 95131  
 Tel: 408-432-8192  
 Fax: 408-432-8198

MS. JENIFER BEATTY  
 LEVINE-FRICKE  
 1900 POWELL STREET 12TH FLOOR  
 EMERYVILLE, CA 94608

Workorder # : 9310022  
 Date Received : 10/01/93  
 Project ID : 1649.21  
 Purchase Order: N/A

The following samples were received at Anametrix, Inc. for analysis :

ANAMETRIX ID	CLIENT SAMPLE ID
9310022- 1	SE-8
9310022- 2	SN-8
9310022- 3	SW-10

This report consists of 11 pages not including the cover letter, and is organized in sections according to the specific Anametrix laboratory group or section which performed the analysis(es) and generated the data. The Report Summary that precedes each section will help you determine which Anametrix group is responsible for those test results, and will bear the signatures of the department supervisor and the chemist who have reviewed the analytical data. Please refer all questions to the department supervisor who signed the form.

Anametrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234. A detailed list of the approved fields of testing can be obtained by calling our office, or the DHS Environmental Laboratory Accreditation Program at (415)540-2800.

If you have any further questions or comments on this report, please give us a call as soon as possible. Thank you for using Anametrix.

ANAMATRIX ID	CLIENT SAMPLE ID
9310003- 1	BS-14
9310003- 2	TP1-8

This report consists of 13 pages not including the cover letter, and is organized in sections according to the specific Anamatrix laboratory group or section which performed the analysis(es) and generated the data. The Report Summary that precedes each section will help you determine which Anamatrix group is responsible for those test results, and will bear the signatures of the department supervisor and the chemist who have reviewed the analytical data. Please refer all questions to the department supervisor who signed the form.

Anamatrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234. A detailed list of the approved fields of testing can be obtained by calling our office, or the DHS Environmental Laboratory Accreditation Program at (415)540-2800.

If you have any further questions or comments on this report, please give us a call as soon as possible. Thank you for using Anamatrix.

Date Analyzed	10/01/93	10/01/93	10/01/93
RLMF	1	1	1

ND - Not detected at or above the practical quantitation limit for the method.

BTEX - Benzene, Toluene, Ethylbenzene, and Total Xylenes are determined by modified EPA Method 8020 following sample purge and trap by EPA Method 5030.

RLMF - Reporting Limit Multiplication Factor.

Anametrix control limits for surrogate p-Bromofluorobenzene recovery are 53-147%.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

The following samples were received at Anamatrix, Inc. for analysis :

ANAMATRIX ID	CLIENT SAMPLE ID
9310084- 1	SNW-8-R

This report consists of 11 pages not including the cover letter, and is organized in sections according to the specific Anamatrix laboratory group or section which performed the analysis(es) and generated the data. The Report Summary that precedes each section will help you determine which Anamatrix group is responsible for those test results, and will bear the signatures of the department supervisor and the chemist who have reviewed the analytical data. Please refer all questions to the department supervisor who signed the form.

Anamatrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234. A detailed list of the approved fields of testing can be obtained by calling our office, or the DHS Environmental Laboratory Accreditation Program at (415)540-2800.

If you have any further questions or comments on this report, please give us a call as soon as possible. Thank you for using Anamatrix.

Instrument I.D.		HP21	HP21
Date Analyzed		10/07/93	10/07/93
RLMF		1	1

ND - Not detected at or above the practical quantitation limit for the method.

BTEX - Benzene, Toluene, Ethylbenzene, and Total Xylenes are determined by modified EPA Method 8020 following sample purge and trap by EPA Method 5030.

RLMF - Reporting Limit Multiplication Factor.

Anametrix control limits for surrogate p-Bromofluorobenzene recovery are 53-147%.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

The following samples were received at Anamatrix, Inc. for analysis :

ANAMATRIX ID	CLIENT SAMPLE ID
9310042- 1	SN-14
9310042- 2	SE-14
9310042- 3	SW-14

This report consists of 13 pages not including the cover letter, and is organized in sections according to the specific Anamatrix laboratory group or section which performed the analysis(es) and generated the data. The Report Summary that precedes each section will help you determine which Anamatrix group is responsible for those test results, and will bear the signatures of the department supervisor and the chemist who have reviewed the analytical data. Please refer all questions to the department supervisor who signed the form.

Anamatrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234. A detailed list of the approved fields of testing can be obtained by calling our office, or the DHS Environmental Laboratory Accreditation Program at (415)540-2800.

If you have any further questions or comments on this report, please give us a call as soon as possible. Thank you for using Anamatrix.

RLMF	1	1	1	1

ND - Not detected at or above the practical quantitation limit for the method.  
BTEX - Benzene, Toluene, Ethylbenzene, and Total Xylenes are determined by modified EPA Method 8020 following sample purge and trap by EPA Method 5030.  
RLMF - Reporting Limit Multiplication Factor.

Anamatrix control limits for surrogate p-Bromofluorobenzene recovery are 53-147%.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

ND - Not detected at or above the practical quantitation limit for the method.  
 BTEX - Benzene, Toluene, Ethylbenzene, and Total Xylenes are determined by modified EPA Method 8020 following sample purge and trap by EPA Method 5030.  
 RLMF - Reporting Limit Multiplication Factor.

Anamatrix control limits for surrogate p-Bromofluorobenzene recovery are 53-147%.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.
