## TECHNICAL MEMO

**To:** Mr. Charles Carmel  
Remediation Management Services Company  
4 Centerpointe Drive, Suite 200  
La Palma, CA 90623

**From:** Mr. Bill Patzelt  
Antea®Group - Project Manager  
P.G. No.: 9465

**Date:** June 1, 2017

**Re:** Case Closure Request Addendum, Former Atlantic Richfield Company Station No. 596-A, 1900 Webster Street, Oakland, Alameda County, California; ACEH Case No. R00003100; Geo Tracker Global ID # T10000004348

---

On behalf of Atlantic Richfield Company (ARC), a BP affiliated Company, Antea Group has prepared the following Case Closure Request Addendum in the format of a Technical Memo for former ARCO 596-A located at 1900 Webster Street in Oakland, California (the Site), Figure 1. The Technical Memo was prepared after review of the *Conceptual Site Model, Sensitive Receptor Survey, and Case Closure Request* dated May 24, 2016, and the *Conceptual Site Model, Sensitive Receptor Survey, and Case Closure Request Addendum* dated August 25, 2016, prepared by Broadbent and Associates (Broadbent).

After reviewing the 2016 Broadbent reports, Antea Group believes that the media specific criteria for groundwater and soil vapor under the Low Threat Closure Policy (LTCP) has been met. The following Technical Memo will discuss how the Justification for Site Closure Criteria under the LTCP has been met at the Site.

### **Justification of Site Closure**

#### ***General Criteria***

In the *Conceptual Site Model, Sensitive Receptor Survey, and Case Closure Report (May 24, 2016)*, Broadbent explains the General Criteria for the Site as it pertains to the LTCP checklist. Below is the excerpt for the General Criteria portion of the Broadbent Report. Antea Group concurs with the conclusions that Broadbent met in the General Criteria portion of their report.

***"The unauthorized release is located within the service area of a public water system***  
The Site is located within the East Bay Municipal Utilities District Service Area.

***The unauthorized release consists only of petroleum***

The release at the Site occurred presumably from the former USTs. The Site was a gasoline service station from approximately 1940 until 1966. According to the SCHUTZE investigation report, there is no indication of any other contaminant releases other than petroleum (SCHUTZE, 2012).

***The unauthorized release has been stopped***

According to AEI Phase I Environmental Site Assessment, there were no records on file at the Oakland Building Department, Alameda county Environmental Health Services Department, or Oakland Fire Department relating to the removal of USTs associated with the Site (AEI, 2011). According to the P&D investigation report, Mr. Buttner suggested that “if the USTs had not been removed at the time of service station demolition, then they would have been removed at the time of foundation system construction for the existing building onsite. No USTs have been encountered during any of the investigations conducted for the Site” (P&D, 2013).

***Free product has been removed to the maximum extent practicable***

No free product has been encountered at the Site during any of the investigations that were conducted.

***A conceptual site model (CSM) that assesses the nature, extent, and mobility of the release has been developed***

A CSM has been prepared for this Site and is presented as Table 1.

***Secondary source has been removed to the extent practical***

According to Mr. Buttner, the site has been excavated to several feet on the south side of the parcel adjacent to 19th Street following demolition of the gasoline station and in preparation for construction of the new building onsite. He also did not recall contaminated soil being encountered during Site grading for building construction.

***Soil and groundwater have been tested for MTBE and results reported in accordance with Health and Safety Code 25296.15***

Soil and groundwater samples collected have been analyzed for methyl tert-butyl ether (MTBE). However, it should be noted that observed impacts of MTBE in soil or groundwater samples collected during Site investigations are not associated with previous ARC operations at the Site, as MTBE was not utilized as a gasoline additive while the gasoline station Table 2 and 3 contains the soil and groundwater results from the recent investigation. Historical MTBE analytical data are included in Appendix A.

***Nuisance as defined by the Water Code section 13050 does not exist at this Site***

A nuisance as defined by the water code does not exist at this Site.”

***Media Specific Criteria: Groundwater***

***Is the contaminant plume that exceeds water quality objectives stable or decreasing in areal extent?***

Based on the available data, water quality objectives for benzene and methyl tert-butyl ether (MTBE) have been met at the Site. It should be noted that MTBE was not present as an additive in gasoline prior to 1979 and is not a constituent of concern at the Site due to the fact the operational period of this station was from 1944 to 1966. Groundwater samples collected at the Site were analyzed for MTBE as required in the LTCP, even though MTBE is not present on the Site.

***Additional LTCP Criteria***

The highest concentration of benzene in a groundwater sample collected from soil boring SB-3 is 89 ug/L. This concentration is below the LCTP criteria of 3,000 ug/L (Scenario 2), and 1,000 ug/L (Scenario 4). Based on available data from nearby sites (Figure 2) regional groundwater flow direction is towards Lake Merritt and the gradients are relatively flat. Data from soil borings indicate that the Site geology is similar to the nearby sites. It should be noted

that Chevron #9-0020 located at 1633 Harrison Street (T0600100304, Attachment 1 and in the References Section: Geotracker link) was closed in January 2015 under Scenario 5 of the LTCP with a "Current Site Maximum" of 190 ug/L Benzene, and the dissolved benzene plume was not defined in the down gradient direction. Although the down gradient extent of the groundwater plume at the subject Site has not been defined in the field, the nearest receptors to the site are Lake Merritt (900 feet east) and an irrigation well located at 244 Lakeside Drive (760 feet east-southeast) (Figure 2). Based on the age of the release (>50 years) and low concentrations of benzene the groundwater plume should be considered mature and stable. These items indicate that using the SWRCB's Technical Justification for Groundwater Media-Specific Criteria would be appropriate, which states that the 90<sup>th</sup> percentile benzene plume length is 350 feet long and maximum is 554 feet in length. Groundwater data from adjacent sites and analysis based on the distances cited in the technical justification paper indicates that both Lake Merritt and the irrigation well are unlikely to be a receptor for the Site. The MTBE and benzene concentrations found to date do not present a risk to human health or the surrounding environment.

**Does the contaminated plume that exceeds water quality objectives meet all of the additional characteristics of one of the five classes of sites?**

When considering all the available data, Antea Group believes the Site meets the criteria of case closure under Scenario 5.

Scenario 1 of the LTCP states that "*1a: The contaminated plume that exceeds the water quality objectives is less than 100 feet in length. 1b: There is no free product. 1c: The nearest existing water supply well or surface body is greater than 250 feet from the defined plume boundary.*"

Scenario 5 of the LTCP states that "*5a: The regulatory agency determines, based on an analysis of site specific conditions that under current and reasonably anticipated near-term future scenarios, the contaminated plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame.*"

The following discusses how the Site meets the objectives of Scenario 1 and Scenario 5:

**1a: The contaminated plume that exceeds the water quality objectives is less than 100 feet in length.**

There are no concentrations of MTBE or benzene above the LTCP criteria. Therefore, there is not a measurable plume length available above the water quality objectives stated in "1a" as it pertains to MTBE and benzene. Grab groundwater samples have been collected from 15 of the 24 soil borings completed on and around the Site. Groundwater at the Site has been encountered in soil borings at varying depths between 13.5 and 23 feet bgs. Figure 3 presents the groundwater concentrations for benzene and MTBE, in the 15 soil boring locations.

Although groundwater monitoring wells have not been installed at the Site, the groundwater flow direction can be reasonably inferred to the north-northeast based on groundwater gradient information collected from the State Water Resources Control Board Geotracker database. The data is presented in Figure 2. Note, the local topography surrounding the Site is presented in Attachment 2 (P&D, 2013) and shows that the topography slope mimics that of the inferred groundwater gradient to the northeast.

A groundwater compliance point down gradient from the highest impacted boring (SB-3) has not been installed. Antea Group believes that an additional compliance point down gradient of the SB-3 is unnecessary because the site specific conditions in regards to plume length for total petroleum hydrocarbons (TPH) are not specifically outlined in Scenario 1 and do not present a risk to human health or the surrounding environment under the objectives of Scenario 5.

Soil boring SB-3 had concentrations of total petroleum hydrocarbons – gasoline range (TPH-G) and total petroleum hydrocarbons – diesel range (TPH-D) at 59,000 ug/L and 200,000 ug/L, respectively. However, it is assumed that

these concentrations were a biased high, based on the subsequent groundwater sample collected from SB-6 in 2015. Soil boring SB-6 is located approximately 5 feet east of SB-3. The TPH-G concentration in groundwater detected in SB-6 was 11,000 ug/L. No TPH-D analytical data was collected from SB-6. Figure 4 presents the groundwater concentrations for TPH-G and TPH-D detected at the Site.

Figure 5 shows that additional sampling points down gradient of the Site would be at least over 150 feet away. Antea Group believes that because there is no dissolved MTBE (which has the capacity to migrate further than the other constituents of concern typically associated with gasoline); and the highest concentration of benzene at the Site is less than 3% of the LTCP; and that the TPH plume is not an objective that needs to fully delineated based on Scenario 1 and Scenario 5; that a down gradient sampling point over 150 feet away from the Site and is not practical or needed to ascertain if the Site is a risk to public health or the environment.

**1b: There is no free product.**

The Site does not have evidence of light non-aqueous phase liquid (LNAPL). It is important to note that the Site ceased operation as a gasoline station in 1966. No LNAPL has been discovered at the Site, and the analytical data from soil samples within the saturated zone are not representative of the LNAPL presence.

A ground penetrating radar (GPR) survey was conducted as part of the geophysical subsurface investigation completed at the Site on May 6, 2013. The results of the GPR survey did not indicate the presence of underground storage tanks (USTs) in the subsurface (P&D, 2013). Figure 6 presents the soil concentrations for benzene, ethyl benzene, and naphthalene in the 24 sample locations collected at the Site, which are below the applicable LCTP criteria. Figure 7 presents the soil concentrations for TPH-G and TPH-D, in the 24 sample locations collected at the Site. As seen in Figure 7, concentrations in the upper 9.5 feet are non-detect for TPH-G. Additionally, in the upper 9.5 feet, TPH-D is primarily non-detect with the highest detectable concentration being at 7 feet below ground surface (bgs) in SB-7 (6.8 mg/kg). Of the 13 samples collected beneath the building footprint at depths equal to or greater than 13 feet bgs, only five samples had detectable concentrations for TPH-G, ranging from 4.0 mg/kg to 500 mg/kg. Concentrations for TPH-D at the same sample depths had detections ranging from 1.2 mg/kg to 1200 mg/kg.

**1c: The nearest existing water supply well or surface body is greater than 250 feet from the defined plume boundary.**

The nearest water supply well or surface water body is greater than 250 feet away. A sensitive receptors survey was completed by Broadbent and is presented in Figure 8. Lake Merritt and Well 1 are the only receptors located within a 1000-foot radius. Note, the closest distance to Lake Merritt and Well 1 are to the east, which are cross-gradient from the Site.

**Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air**

**Is the site an active commercial petroleum fueling facility?**

No, the Site is not an active commercial petroleum fueling facility.

**Do site-specific conditions at the release site satisfy all of the applicable characteristics and criteria of scenarios 1 through 3 or all of the applicable characteristics and criteria of scenario 4?**

Yes, the Site meets the criteria of Scenarios 1 through 3 of the LTCP for vapor intrusion. No LNAPL has been discovered in the various investigations completed at the Site. Given that the Site has no LNAPL, the criteria for Scenario 1 and Scenario 2 have been met. The criteria for Scenario 3 (Figure C from the LTCP), has also been met at the Site. Scenario 3 (Figure C) requires a bio-attenuation zone of 5 feet with Total TPH soil concentrations below 100 mg/kg. In addition, oxygen data from the bio-attenuation zone must be greater than or equal to 4% oxygen, and groundwater benzene concentrations must be less than 1000 ug/L.

Figure 7 presents the TPH-G and TPH-D concentrations in soil for the 24 various soil borings completed at the Site. As seen in this figure, total TPH is not detected above 100 mg/kg in the upper 9.5 feet at the Site. The highest benzene concentration in groundwater was discovered in SB-3 with a concentration of 89 ug/L. Note, Broadbent completed a soil gas survey at the Site and collected samples for oxygen analysis, all sample results were above 4% oxygen. Attachment 3 presents the soil gas concentration table for the four samples collected and includes oxygen data (Broadbent, 2015). Given the lack of soil detections for Total TPH (TPH-G and TPH-D) above 100 mg/kg in the upper 5 feet, the lack of groundwater detections for benzene above 1000 ug/L, and the oxygen percentages above 4%, the criteria for Scenario 3 (Figure C) has been met.

**Has a site-specific risk assessment for the vapor intrusion pathway been conducted and demonstrates that human health is protected to the satisfaction of the regulatory agency?**

Criteria for Scenarios 1 through 3 have been met. A vapor intrusion pathway is unlikely.

**As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering control, has the regulatory agency determined that petroleum vapors migrating from soil or groundwater will have no significant risk or adversely affecting human health?**

Yes, the criteria for Scenarios 1 through 3 have been met and therefore petroleum vapors migrating from soil or groundwater are unlikely to present a risk at the Site.

**Media Specific Criteria: Direct Contact and Outdoor Air Exposure**

In the *Conceptual Site Model, Sensitive Receptor Survey, and Case Closure Report*, Broadbent explains the Media Specific Criteria: Direct Contact and Outdoor Air Exposure for the Site as it pertains to the LTCP checklist. Antea Group concurs with the conclusions that Broadbent met in the Direct Contact and Outdoor Air Exposure Criteria portion of their report.

**Conclusion**

Antea Group believes that the General Criteria and Media Specific Criteria for Groundwater, Petroleum Vapor Intrusion to Indoor Air and Direct Contact and Outdoor Air Exposure under the Low Threat Closure Policy (LTCP) has been met.

**Notes:**

- Concentrations from SB-9 and SB-10 are associated with upgradient sources and are not discussed.

Dear Ms. Coulter and Mr. Small:

This letter transmits the enclosed underground storage tank (UST) case closure letter in accordance with Chapter 6.75 (Article 4, Section 25296.10[g]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, the Alameda County Environmental Health (ACEH) is required to use this case closure letter for all UST leak sites. We are also transmitting to you the enclosed case closure summary. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed. This case closure letter and the case closure summary can also be viewed on the State Water Resources Control Board's Geotracker website (<http://geotracker.waterboards.ca.gov>) and the Alameda County Environmental Health website (<http://www.acgov.org/aceh/index.htm>).

If you have any questions, please call Mark Detterman at (510) 567-6876. Thank you.

Sincerely,

A handwritten signature in black ink that reads "Dilan Roe".

Subject: Case Closure for Fuel Leak Case No. RO0000143 (Global ID # T0600100304), Chevron #9-0020,  
1633 Harrison Street, Oakland, CA 94612

Dear Ms. Coulter and Mr. Small:

This letter confirms the completion of a site investigation and remedial action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

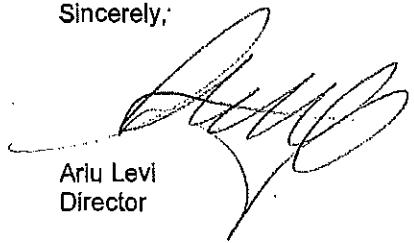

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

Please be aware that claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact our office if you have any questions regarding this matter.

Sincerely,

Ariu Levi  
Director

## UST Case Closure Summary Form

### Additional Information:

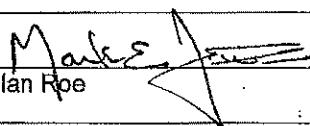

**Site Management Requirements:** This fuel leak case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP). Based on this evaluation, no site management requirements appear to be necessary. However, excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities.

### RWQCB Notification

Notification Date: May 23, 2014

RWQCB Staff Name: Cherie McCaulou	Title: Engineering Geologist
-----------------------------------	------------------------------

### Local Agency Representative

Prepared by: Mark Dettman	Title: Senior Hazardous Materials Specialist
Signature: 	Date: 1/27/2015
Approved by: Dilan Roe	Title: LOP and SCP Program Manager
Signature: 	Date: 1/27/2015

This Case Closure Summary along with the Case Closure Transmittal letter and the Remedial Action Completion Certification provides documentation of the case closure. This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions. The Conceptual Site Model may not contain all available data. Additional Information on the case can be viewed in the online case file. The entire case file can be viewed over the Internet on the Alameda County Environmental Health (ACEH) website (<http://www.acgov.org/aceh/lop/ust.htm>) or the State of California Water Resources Control Board GeoTracker website (<http://geotracker.waterboards.ca.gov>). Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the ACEH website.

STAFF NOTES (INTERNAL) Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <a href="http://ehgis.acgov.org/dehpublic/dehpublic.jsp">http://ehgis.acgov.org/dehpublic/dehpublic.jsp</a> .																																																																																																																																																																																																					
SITE HISTORY Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <a href="http://ehgis.acgov.org/dehpublic/dehpublic.jsp">http://ehgis.acgov.org/dehpublic/dehpublic.jsp</a> .																																																																																																																																																																																																					
The subject site was used as a service station until 1972 when the site was demolished and the tanks removed. The station building, two dispenser islands, one waste oil UST, and two gasoline USTs were removed. An earlier generation of USTs had previously been removed. Since 1976 it has been used as a parking lot. A soil vapor survey was conducted in 1988 to determine if the site had been impacted; three wells were installed in October 1988, four wells were installed in 1989, four wells were installed offsite in June 1990, two offsite wells were installed in October 1991, and another two wells were installed offsite in late 1992, for a total of 16 wells. Limited soil excavation was conducted in January 1992. An SVE system operated onsite in 1993, but showed minimal effectiveness. In June 2004 the first generation UST pit was investigated and impacts were discovered. In April 2007 four boreholes were installed to investigate the extent of contamination associated with the first generation USTs. In June 2007 a vapor survey was conducted and elevated concentrations were detected in all vapor points. In early 2008 105 bucket auger borings were installed to remove impacted soil associated with the first generation USTs. A report on the installation of a post-remediation groundwater monitoring well and the installation of several soil bores to infill a gap in the downgradient extent of the groundwater plume was generated. Well MW-17 was installed in October 2010. Additional excavation of soil impacted by the second generation USTs and the waste oil UST was conducted between January and June 2011 as part of the redevelopment project for the subject site.

**LTCP GROUNDWATER SPECIFIC CRITERIA**

**LTCP Groundwater Specific Scenario under which case was closed: Scenario 5.**

Site Data		LTCP Scenario 1 Criteria	LTCP Scenario 2 Criteria	LTCP Scenario 3 Criteria	LTCP Scenario 4 Criteria
Plume Length	<1,000 feet	<100 feet	<250 feet	<250 feet	<1,000 feet
Free Product	No free product	No free product	No free product	Removed to maximum extent practicable	No free product
Plume Stable or Decreasing	Stable	Stable or decreasing	Stable or decreasing	Stable or decreasing for minimum of 5 Years	Stable or decreasing
Distance to Nearest Water Supply Well	925 feet downgradient to irrigation well	>250 feet	>1,000 feet	>1,000 feet	>1,000 feet
Distance to Nearest Surface Water and Direction	1,160 feet downgradient	>250 feet	>1,000 feet	>1,000 feet	>1,000 feet
Property Owner Willing to Accept a Land Use Restriction?	Not applicable for groundwater specific criteria.	Not applicable	Not applicable	Yes	Not applicable

**GROUNDWATER CONCENTRATIONS**

Constituent	Historic Site Maximum (µg/L)	Current Site Maximum (µg/L)	LTCP Scenario 1 Criteria (µg/L)	LTCP Scenario 2 Criteria (µg/L)	LTCP Scenario 3 Criteria (µg/L)	LTCP Scenario 4 Criteria (µg/L)
Benzene	810	190	No criteria	<3,000	No criteria	<1,000
MTBE	120	<1	No criteria	<1,000	No criteria	<1,000
Naphthalene	320	300				

Scenario 5: If the site does not meet scenarios 1 through 4, has a determination been made that under current and reasonably expected future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame?

Yes

**Comments: Water Supply Wells in Vicinity:** The water well survey results from the GeoTracker Groundwater Ambient Monitoring Assessment (GAMA) tool indicates no public water supply wells, no Calif. Dept. of Public Health (CDPH), no Dept. Pesticide Regulation (DPR), and no Dept. of Water Resources (DWR) water wells within a 2,000 foot radius.

The downgradient extent of the groundwater plume has not been defined in the field. The Alameda County Public Works Agency (ACPWA) data for water wells indicates that one irrigation well is located at 244 Lakeshore Drive at a distance of approximately 925 feet downgradient of the source, and approximately 750 ft downgradient of well MW-16 which documents groundwater contamination at the furthest point downgradient of the site. A second irrigation well is located approximately 1,500 feet downgradient of the source.

The groundwater plume appears to be mature and stable as indicated by relatively low concentrations of benzene and other volatile compounds in groundwater downgradient of the site. Thus it appears appropriate to evaluate the site using the SWRCB's *Technical Justification for Groundwater Media-Specific Criteria*. This document states that the 90<sup>th</sup> percentile TPH plume length is 413 feet long, and the maximum known TPH plume length is 855 feet. The technical justification paper also indicates that the 90<sup>th</sup> percentile benzene plume length is 350 feet long, and the maximum is 554 feet in length. This data and analysis based on the distances cited in the technical justification paper indicates that both irrigation wells are unlikely to be a receptor for the site.

**ATTACHMENT 4**  
**LTCP VAPOR SPECIFIC CRITERIA**

**LTCP Vapor Specific Scenario under which case was closed: Scenario 4 with No Bioattenuation zone.**

Active Fueling Station		Active as of Not applicable					
Site Data		LTCP Scenario 1 Criteria	LTCP Scenario 2 Criteria	LTCP Scenario 3A Criteria	LTCP Scenario 3B Criteria	LTCP Scenario 3C Criteria	LTCP Scenario 4 Criteria
Unweathered LNAPL	No LNAPL	LNAPL in groundwater	LNAPL in soil	No LNAPL	No LNAPL	No LNAPL	No criteria
Thickness of Bioattenuation Zone Beneath Foundation	5 feet	≥30 feet	≥30 feet	≥5 feet	≥10 feet	≥25 feet	≥25 feet
Total TPH in Soil in Bioattenuation Zone	<100 mg/kg / 5,180 mg/kg	<100 mg/kg	<100 mg/kg	<100 mg/kg	<100 mg/kg	<100 mg/kg	<100 mg/kg
Maximum Current Benzene Concentration in Groundwater	190 µg/L	No criteria	No criteria	<100 µg/L	≥100 and <1,000 µg/L	<1,000 µg/L	No criteria
Oxygen Data within Bioattenuation Zone	≥4% at lower end of zone.	No criteria	No criteria	No oxygen data or <4%	No oxygen data or <4%	≥4% at lower end of zone	≥4% at lower end of zone
Depth of soil vapor measurement beneath foundation	5 feet	No criteria	No criteria	No criteria	No criteria	No criteria	≥5 feet

**SCENARIO 4 DIRECT MEASUREMENT OF SOIL VAPOR CONCENTRATIONS**

Site Soil Vapor Data			No Bioattenuation Zone		Bioattenuation Zone	
Constituent	Historic Maximum (µg/m³)	Current Maximum (µg/m³)	Residential	Commercial	Residential	Commercial
Benzene	110	<4	<85	<280	<85,000	<280,000
Ethylbenzene	480	<5	<1,100	<3,600	<1,100,000	<3,600,000
Naphthalene	<330	<25	<93	<310	<93,000	<310,000

If the site does not meet scenarios 1 through 4, does a site-specific risk assessment for the vapor intrusion pathway demonstrate that human health is protected?

If the site does not meet scenarios 1 through 4, has a determination been made that petroleum vapors from soil or groundwater will have no significant risk of adversely affecting human health?

Comments: Available analytical data indicates there is one limited area with elevated residual hydrocarbon contamination as shallow as five feet below grade surface (bgs) at the site. Soil sample EX8, collected at a depth of 5 feet bgs was documented to contain 5,180 mg/kg combined TPHd and TPHg, <0.024 mg/kg benzene, 0.96 mg/kg ethylbenzene, and 3.1 mg./kg naphthalene. The soil contamination is associated with a former waste oil UST. This soil sample was collected vertically below the edge of an existing retaining wall and appears to be laterally limited as indicated by soil sample EX-9 (<4.0 mg/kg TPHd, < 1.0 TPHg, <0.005 BTEX and MTBE), also collected at 5 feet bgs. Soil contamination at this location was excavated to the extent practicable due to the presence of the retaining wall. The site also meets Scenario 4 Criteria for soil gas without a bioattenuation zone.

**ATTACHMENT 5**  
**LTCP DIRECT CONTACT AND OUTDOOR AIR EXPOSURE CRITERIA**

**LTCP Direct Contact and Outdoor Air Exposure Specific Scenario under which case was closed: Maximum concentrations of petroleum hydrocarbons are less than or equal to those in Table 1 below.**

Are maximum concentrations less than those in Table 1 below?		Yes		
Constituent	Residential		Commercial/Industrial	Utility Worker
	0 to 5 feet bgs (mg/kg)	Volatilization to outdoor air (5 to 10 feet bgs) mg/kg	0 to 5 feet bgs (mg/kg)	Volatilization to outdoor air (5 to 10 feet bgs) mg/kg
Site Maximum Benzene	<0.3	<0.3	<0.3	<0.3
LTCP Criteria Benzene	≤1.0	≤2.8	≤8.2	≤12
Site Maximum Ethylbenzene	0.96	0.88	0.96	0.96
LTCP Criteria Ethylbenzene	≤2.1	≤3.2	≤89	≤134
Site Maximum Naphthalene	3.1	— <sup>1</sup>	— <sup>1</sup>	3.1
LTCP Criteria Naphthalene	≤0.7	≤9.7	≤45	≤219
Site Maximum PAHs	<0.033	NA	<0.033	<0.033
LTCP Criteria PAHs	≤0.085	NA	≤0.68	≤4.5
If maximum concentrations are greater than those in Table 1, are they less than levels from a site-specific risk assessment?	---			
If maximum concentrations are greater than those in Table 1, has a determination been made that the concentrations of petroleum in soil will have no significant risk of adversely affecting human health as a result of controlling exposure through the use of mitigation measures or through the use of institutional controls?	---			
Comments: Footnote 1: Naphthalene was not analyzed for in soil in the 5 to 10 foot depth interval at the former waste oil UST location as the excavation extended to 12 feet bgs, and the soil was excavated and disposed off at an offsite location. Naphthalene concentrations at the depth limit of the excavation (12 feet) may be a suitable proxy for the 5 to 10 foot interval and was detected at a concentration of <0.033 mg/kg.

## Abbreviations/Notes:

Total Petroleum hydrocarbons as Diesel (TPHd) by EPA method 8015B mod with silica gel cleanup unless otherwise noted.

Total petroleum hydrocarbons as gasoline (TPHg) by EPA method 8015 unless otherwise noted.

Benzene, toluene, ethylbenzene, xylenes (BTEX), methyl tert-butyl ether (MTBE), ethanol t-butyl alcohol (TBA), di-isopropyl ether (DIPE), ethyl t-butyl ether (EIBE), t-amyl methyl ether (TAME), 1,2-dibromoethane (EDB) and 1,2-dichloroethane (1,2-DCA) by EPA method 8260 unless otherwise noted.

Total Organic Carbon by EPA method 9060.

Poly chlorinated biphenyl (PCBs) by EPA method 8032.

Naphthalene by EPA Method 8270/E260

Poly-aromatic hydrocarbons (PAHs) by EPA Method 8270

<sup>1</sup> Based on the seven carcinogenic PAHs benzo(a)pyrene toxicity equivalent (BAPE).<sup>2</sup> TPHd, TPHg and BTEX by unknown method.<sup>3</sup> Diesel range concentration noted, non standard diesel pattern observed.<sup>4</sup> Gasoline concentration noted, non standard gasoline pattern observed.<sup>5</sup> Gasoline concentration noted, majority of peaks observed in Diesel range.<sup>6</sup> TPHg by EPA method 8015/ 5030, BTEX by EPA method 8021.<sup>7</sup> TPHg reported as Total Purgeable Petroleum Hydrocarbons (TPPH) by EPA method 8260, Oil and Grease by EPA Method 5035.<sup>8</sup> TPHg reported as Total Fuel Hydrocarbons (TFH) by EPA method 8015, BTEX by EPA method 8020.<sup>9</sup> No Halogenated Volatile Organic (HVOCS) detected by EPA Method 8010<sup>10</sup> = Measured in parts per billion (ppb).

ftg = Feet below grade.

<sup>a</sup>=sample not collected.

ND = Not detectable above laboratory detection limits.

-- = Not analyzed or not applicable.

&lt;x&gt; = Not detected above lab detection limit.

Bold = Concentration exceeds applicable ESL.

Strikethrough = Soil excavated.

**Abbreviations/Notes:**

Mercury (Hg) by EPA method 7471A.

Thallium (Tl), arsenic(As), selenium (Se), antimony (Sb), barium (Ba), beryllium (Be), cadmium (Cd), trivalent chromium (Cr (III)), cobalt (Co), copper (Cu), lead (Pb), molybdenum (Mo), nickel (Ni), silver (Ag), vanadium (V), and zinc (Zn) by EPA Method 6010B, unless otherwise noted.

~ = Measured in parts per billion (ppb).

ftg = Feet below grade.

\* = sample not collected.

ND = Not detectable above laboratory detection limits.

— = Not analyzed or not applicable.

&lt;x = Not detected above lab detection limit.

Bold = Concentration exceeds applicable ESL.

Strikethrough = Soil excavated.

<sup>1</sup> Cd, Cr(III), Pb, Ni, and Zn by EPA Method 3050<sup>2</sup> Cd, Cr(III), Pb, Ni, and Zn by EPA Method 6020<sup>3</sup> Cd, Cr, Pb, and Zn by EPA Methods 7131, 7191, 7421, and 7950

**Table 2. Analytic Results for Soil: TPHg, TPHd, TOG, BTEX, MTBE, Methanol, SVOCs, VOCs - Former Chevron Station 9-0020, 1633 Harrison Street, Oakland, CA**

Sample ID	Sample Date	Sample Depth (fbg)	TPHg	TPHd*	TOG	B	T	E	X	MTBE	Methanol	PCBs	SVOCs	VOCs
Concentrations reported in milligrams per kilogram - mg/kg														
ESLs	Shallow Soil ≤3m	Residential	100	100	410	0.12	29	33	31	8.4	NE	0.089		
	Deep Soil ≥3m	Residential	4,200	150	5,000	11	29	33	420	8.4	NE	3.4		See Notes for ESLs

Semi-Volatile Organic Compounds (SVOCs) detected in soil samples noted above, with Shallow and Deep Soil ESLs, respectively. Please see lab report for individual concentrations.

a = Pyrene (500, 1000)

d = Fluorene (410, 1000)

g = Fluoranthene (40, 840)

j = Benzo(a)anthracene (0.38, 15)

b = Naphthalene (1.3, 42)

e = Phenanthrene (40, 950)

h = Benzo(g,h,i)perylene (35, 35)

k = Chrysene (40, 53)

c = Acenaphthylene (370, 830)

f = Anthracene (40, 85)

I = Butylbenzylphthalate (NE)

l = 2-Methylnaphthalene (12, 12)

Volatile Organic Compounds (VOCs) detected in soil samples noted above, with Shallow and Deep Soil ESLs, respectively. Please see lab report for individual concentrations:

m = Isopropylbenzene (NE)

p = 1,2,4-Trimethylbenzene (NE)

s = 1,4-Dichlorobenzene (1.2, 13)

v = Naphthalene (1.3, 42)

n = n-Propylbenzene (NE)

q = sec-Butylbenzene (NE)

t = n-Butylbenzene (NE)

o = 1,3,5-Trimethylbenzene (NE)

r = p-Isopropyltoluene (NE)

u = 1,2-Dichlorobenzene (11, 11)

03772	N-Nitrosodiphenylamine	86-30-6	N.D.	0.033	mg/kg

N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine.  
The result reported for N-nitrosodiphenylamine represents the combined  
total of both compounds.

Abbreviations/Notes:

Total petroleum hydrocarbons C5+ (TPH C5+) by EPA Method TO-3, originally reported in micrograms per liter ( $\mu\text{g/L}$ ) and converted to  $\mu\text{g/m}^3$  using Air Toxics Units Conversion Calculator.

Total petroleum hydrocarbons as gasoline (TPHg) by EPA Method TO-3 or TO-15 as noted. TO-3 concentrations originally reported in  $\mu\text{g/L}$  and converted to  $\mu\text{g/m}^3$  using Air Toxics Units Conversion Calculator.

Benzene, toluene, ethylbenzene and xylenes (BTEX) and by EPA TO-15.

Methyl tertiary butyl ether (MTBE), tert butyl ether (TBA), isopropyl ether (DIPE), ethyl-tert-butyl ether (ETBE), tert amyl-methyl ether (TAME), 1,2-dibromoethane (EDB), 1,2-dichloroethane (1,2-DCA), naphthalene, chloroform and ethanol by EPA Method TO-15.

Other Highly Volatile Organic Compounds (HVOCS) = Tetrachloroethane, trichloroethane, trans-1,2-dichloroethane, cis-1,2-dichloroethane, 1,1-dichloroethane, carbon tetrachloride, 1,1,1-trichloroethane, 1,2-dichloropropane.

Oxygen (O<sub>2</sub>), carbon dioxide (CO<sub>2</sub>), nitrogen (N<sub>2</sub>), methane (CH<sub>4</sub>) and helium by method ASTM D-1946M.

May 2008, Table E-2.

NE = Not established.

1 = Displaying only highest xylene value (either xylene-m,p or xylene-o) detected.

2 = Constituent used as leak detector determined as a Tentatively Identified Compound (TICs) by Modified EPA Method TO-15.

J = Estimated value due to bias in the CCV.

UJ = Non-detected compound associated with low bias in the CCV.

a = No other HVOCS detected except Tetrachloroethane at concentrations reported. Tetrachloroethane ESL = 410  $\mu\text{g/m}^3$ .

Fbgs = Feet below grade.

ND = Not detected above various laboratory method detection limits.

<X = Not detected above laboratory method detection limit X

- = Not analyzed/not applicable.

**BOLD** = Concentration exceeds applicable ESL.

**Abbreviations/Notes**

Total petroleum hydrocarbons as diesel (TPHd) by modified EPA Method 8015B with silica gel cleanup.

Total petroleum hydrocarbons as gasoline (TPHg) by modified EPA Method 8015B

Benzene, toluene, ethylbenzene, total xylenes (BTX), methyl tertiary butyl ether (MTBE), t-butyl alcohol (TBA), di-isopropyl ether (DIPE), ethyl t-butyl ether (ETBE), t-amyl methyl ether (TAME), 1,2-dibromoethane (EDB) and 1,2-dichloroethane (1,2-DCA) by EPA Method 8260B.

Fbg = Feet below grade.

1 = Environmental Screening Levels (ESLs) for groundwater that is a current or potential drinking water source from *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater* prepared by the California Regional Water Quality Control Board - San Francisco Bay Region Interim Final November 2007, Revised May 2008.

NE = Not Established

$\leq$  = Not detected above laboratory method detection limit.

= Not analyzed/not applicable

a = Matrix interference affected surrogate recovery. Reextractions were performed outside the hold time, did not confirm the original results, and were not used.

TABLE 1

Page 55 of 56

GROUNDWATER MONITORING AND SAMPLING DATA  
FORMER CHEVRON SERVICE STATION 90020  
1633 HARRISON STREET  
OAKLAND, CALIFORNIA

Abbreviations and Notes:

TOC = Top of casing  
DTW = Depth to water  
GWE = Groundwater elevation  
(ft-amsl) = Feet above mean sea level  
ft = Feet  
 $\mu\text{g}/\text{L}$  = Micrograms per liter  
TPH-GRO = Total petroleum hydrocarbons - gasoline range organics  
VOCS = Volatile organic compounds  
B = Benzene  
T = Toluene  
E = Ethylbenzene  
X = Xylenes (Total)  
MTBE = Methyl tert butyl ether  
1,1-DCE = 1,1-Dichloroethene  
MC = Methylene chloride  
t-1,2-DCE = trans-1,2-Dichloroethene  
c-1,2-DCE = cis-1,2-Dichloroethene  
1,1,1-TCA = 1,1,1-Trichloroethane  
Carbon Tet = Carbon tetrachloride  
1,2-DCA = 1,2-Dichloroethane  
TCE = Trichloroethene  
1,2-DCP = 1,2-Dichloropropane  
1,2-DCE = 1,2-Dichloroethene  
PCE = Tetrachloroethene  
TBA = Tert-Butyl alcohol  
DIPE = Diisopropyl ether  
ETBE = Tert-Butyl ethyl ether  
TAME = Tert-Amyl methyl ether  
EDB = 1,2-Dibromoethane (Ethylene dibromide)  
— = Not available / not applicable  
 $<\text{x}$  = Not detected above laboratory method detection limit  
J = Estimated concentration  
\* TOC elevations were surveyed on October 16, 2010, by Morrow Surveying. Vertical datum is NAVD 88 from GPS observations.  
1 Confirmation run.  
2 ORC installed.

TABLE 1

Page 56 of 56

GROUNDWATER MONITORING AND SAMPLING DATA  
FORMER CHEVRON SERVICE STATION 90020  
1633 HARRISON STREET  
OAKLAND, CALIFORNIA

- 3 ORC in well.  
4 Laboratory report indicates gasoline C6-C12.  
5 Laboratory report indicates gasoline C6-C12 + unidentified hydrocarbons C6-C12.  
6 BTEX and MTBE by EPA Method 8260.  
7 Removed ORC in well.  
8 Laboratory report indicates this sample was analyzed 1 day outside the method hold time.  
9 The vial submitted for volatile analysis did not have a pH<2 at the time of analysis. The pH of this sample was pH=5.  
10 Inaccessible.  
11 Not Sampled due to insufficient water.  
12 Abandoned.  
13 Destroyed.  
14 1,1-DCE was detected at 1.3 ppb, 1,1-DCA was detected at 0.5 and Chlorobenzene was detected at 0.7 ppb.  
15 2-butanone was detected at 160 ppb and Acetone was detected at 5.0 ppb.  
16 1,1-DCA was detected at 0.6 ppb.  
17 Groundwater monitoring and sampling data presented in well installation report.

**Soil Vapor Analytical Results**  
February 2015  
Former ARC Station No. 596-A  
1900 Webster Street, Oakland, California

Soil Vapor Probe Identification	Probe Sample Depth (feet bgs)	Date Collected	GRO ( $\mu\text{g}/\text{m}^3$ )	Benzene ( $\mu\text{g}/\text{m}^3$ )	Toluene ( $\mu\text{g}/\text{m}^3$ )	Ethylbenzene ( $\mu\text{g}/\text{m}^3$ )	Total Xylenes* ( $\mu\text{g}/\text{m}^3$ )	MTBE ( $\mu\text{g}/\text{m}^3$ )	Naphthalene ( $\mu\text{g}/\text{m}^3$ )	Carbon Dioxide (%)	Methane (%)	Oxygen (%)
SG-1A	3.0-3.50	2/25/2015	<b>22,000</b>	ND<13	<b>16</b>	<b>55</b>	<b>200</b>	<b>16</b>	ND<21	3.8	0.0017	17.0
SG-1B	5.25-5.75	2/25/2015	<b>9,500</b>	ND<13	ND<15	<b>22</b>	<b>83</b>	ND<14	ND<21	3.9	0.0017	16.0
SG-2A	3.0-3.50	2/25/2015	<b>6,900</b>	ND<13	ND<15	ND<17	<b>56</b>	ND<14	ND<21	4.7	0.0016	17.0
SG-2B	5.25-5.75	2/25/2015	<b>4,200</b>	ND<13	ND<15	ND<17	<b>41</b>	ND<14	ND<21	4.5	0.0016	17.0
ESLs			<b>2,500,000</b>	<b>420.0</b>	<b>1,300,000</b>	<b>4,900</b>	<b>440,000</b>	<b>47,000</b>	<b>360</b>	--	--	--

**Notes:**

feet bgs = feet below ground surface

$\mu\text{g}/\text{m}^3$  = micrograms per cubic meter

GRO = gasoline range organics (C6-C12)

MTBE = methyl tert-butyl ether

ND<X.XX = not detected above reporting limit of X.XX  $\mu\text{g}/\text{m}^3$

NA = not analyzed

ESLs - Tier 1 Environmental Screening Levels, *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater*,

California Regional Water Quality Control Board (CRWQCB), Interim Final, December 2013.

Commercial/Industrial exposure scenario; Table E-2
