Subject: Interim Removal Action Plan  
Ashland Housing Project  
16305, 16309, 16325, 16327, 16331, and 16333 Kent Avenue  
And 16375 East 14<sup>th</sup> Street  
Ashland, California

Dear Mr. Saliman:

Ninjo & Moore is pleased to present this Interim Removal Action Plan (IRAP) for the above-referenced site in accordance with the authorization of Resources for Community Development (RCD). This IRAP summarizes the previous findings, opinions, and conclusions regarding the environmental status of the above-referenced property as presented in Ninjo & Moore's Phase II Environmental Site Assessment (ESA) dated July 9, 2013 and Ninjo & Moore's Supplemental Phase II ESA dated September 9, 2013. This IRAP also includes results of supplemental sampling performed at the request of Alameda County Environmental Health and to complete delineation of impacted soil.

We appreciate the opportunity to be of service to you on this project.

Sincerely,  
**NINYO & MOORE**

Peter Sims  
Project Environmental Geologist

Kris M. Larson, PG  
Principal Environmental Geologist

## **1. INTRODUCTION**

Ninyo & Moore was retained by Resources for Community Development (RCD) to prepare an Interim Removal Action Plan (IRAP) for the property located at 16305, 16309, 16325, 16327, 16331, and 16333 Kent Avenue and 16375 East 14<sup>th</sup> Street in the unincorporated community of Ashland, Alameda County, California (site). This IRAP has been prepared based on comments received from Alameda County Environmental Health (ACEH) during a site meeting on September 10, 2013. The IRAP supports the redevelopment of the subject site by RCD.

## **2. PURPOSE**

This report evaluates the occurrence, magnitude, and significance of environmental contamination resulting from activities of historic site occupants. The evaluation is followed by an interim plan for removal action.

## **3. BACKGROUND**

### **3.1. Site Description**

The site is approximately two-acres in area and occupied by one two-storey residence (a converted barn) and six single-storey residences comprising approximately 8,000 square-feet of building space, 740 square-feet of shower/bathroom buildings, a carport, multiple mobile homes, several storage sheds, asphalt and gravel driveways, and parking areas. The site is located in a mixed commercial/residential area of Ashland. The site is bordered by a youth center to the northwest, East 14<sup>th</sup> Street to the northeast, Kent Avenue to the east, residential properties to the south, and baseball fields to the west.

### **3.2. Topography**

According to United States Geological Survey (USGS) 7.5-Minute Series Topographic Map, Hayward, California; the surface elevation at the site is approximately 43 feet above mean sea level (msl). Overall, regional surface slope is towards the northwest.

### **3.3. Site Geology and Sedimentology**

The site is located in the California Coast Range Geologic Province and is underlain by the Franciscan Complex and the Salinian Block. The Salinian block is composed of granitic and metamorphic rocks, overlain by Cretaceous and Cenozoic sedimentary rocks. The Franciscan complex is composed of oceanic crust material and sedimentary rocks of the late Jurassic and Cretaceous age.

Based on field observations made during the previous Phase II Environmental Site Assessment (ESA) and the review of boring logs, material encountered beneath the paved surface on site is primarily silty or sandy clay to a maximum explored depth of 51.5 feet below ground surface (bgs). Copies of the soil boring logs for previous geotechnical and environmental borings (B-1 through B-3, OG2 and CP2) as well as borings C1 and U1 are presented in Appendix A.

### **3.4. Site Hydrogeology**

Groundwater was encountered during the previous Phase II ESA in borings OG2 and CP2 at approximately 6 and 8 feet bgs, respectively. The groundwater flow direction is anticipated to be towards the northwest, following the topography of the area. According to the Regional Water Quality Control Board (RWQCB), Water Quality Control Plan for the San Francisco Basin, the site is located in the East Bay Plan Sub-basin of the Santa Clara Valley Basin.

### **3.5. Surface Water Bodies**

Lake Chabot is the closest surface water body and is located approximately 2 miles northeast of the site. San Francisco Bay is located approximately 4 miles west of the site.

### **3.6. Previous Environmental Investigations**

Multiple previous environmental investigations have been performed at the site including Phase I and Phase II ESAs.

---

### **3.6.1. Phase I ESAs**

Previous Phase I ESA environmental investigations performed at the site were conducted by RGA Environmental (2011) and Belinda P. Blackie, PE, REA (2012a and 2012b). These Phase I ESAs reported that the site was first occupied by field crops and orchards as early as the late 1930s until the early 1950s. Site structures were constructed from as early as the 1930s to the early 1990s, the carport structure was built in the late 1940s to early 1950s, and the trailer park and associated showers/bathrooms were constructed as early as 1954.

Based on the Phase I ESAs, the following Recognized Environmental Conditions (RECs) were identified:

- One rusted 55-gallon drum, several containers of paint thinner, and an abandoned vehicle in the overgrown area south of the building on the 16325 Kent Avenue property;
- One 55-gallon drum leaking a tar-like substance and several containers of unidentified oily material located in the carport area in the northwestern portion of the site;
- Potential heating oil underground storage tanks (USTs) at 16325, 16327, and 16331 Kent Avenue; and
- Lead (from lead based paint) and pesticides (from previous agricultural use) in site soils.

In addition, a 2-foot diameter water cistern west of the 16309 Kent Avenue building, a potential water well at 16331 Kent Avenue, and a former UST southwest of the barn building were identified in the Phase I ESAs, but were not listed as RECs.

Based on the RECs discussed above, Ninyo & Moore conducted a series of Phase II ESAs. A summary of the Phase II ESAs are discussed below.

### **3.6.2. Phase II ESA and Supplemental Phase II ESA**

Based on the RECs identified in the Phase I ESAs, Ninyo & Moore performed a Phase II ESA dated July 9, 2013 and Supplemental Phase II ESA dated September 9, 2013. A

---

limited site reconnaissance was included during the July 9<sup>th</sup> Phase II ESA to evaluate the potential presence of USTs at the site. No evidence of USTs including: vent pipes, fill pipes, or access ways was observed at the time of the limited site reconnaissance. Ninyo & Moore advanced a total of 56 borings during the two ESAs for the purpose of evaluating soil impacts relating to site RECs (Figures 2 through 5). Two borings were also advanced to groundwater for the collection of groundwater samples (Figure 2). Reported concentrations of constituents of concern (COCs) in soil and groundwater samples were below the May 2013 San Francisco Bay RWQCB Environmental Screening Levels (ESLs), Shallow Soils ( $\leq 3$ m bgs) where groundwater is a current or potential source of drinking water (Table A ESLs) or the proposed upper estimate for background arsenic within undifferentiated urban flatland soils (Duverge, 2011), with the exception of three areas, including the Carport Area, and two areas in the vicinity of 16331 Kent Avenue, which are discussed below.

### **Carport Area – Boring CP3**

The soil sample collected from boring CP3 at 0 to 1 feet bgs had reported concentrations of total petroleum hydrocarbons (TPH) as diesel (d), TPH as motor oil (mo), and lead (at 840 milligrams per kilogram [mg/kg], 1,500 mg/kg, and 320 mg/kg, respectively) above the Table A ESLs (Figure 3, Tables 1 and 2). The soil sample collected from boring CP3 at 1 to 2 feet bgs had a reported concentration of TPHd (170 mg/kg) above the Table A ESL. Concentrations of TPHd and TPHmo were reported below Table A ESLs for step-out samples collected to two feet bgs within 10 feet of CP3 and CP3A, so the lateral and vertical extent of TPH impacts to soil was characterized. Concentrations of lead were reported below the Table A ESL for the sample collected at CP3 from 1 to 2 feet bgs and for step-out samples collected from 0 to 1 foot bgs within 10 feet of CP3, so the lateral and vertical extent of lead impacts to soil was characterized.

### **16331 Site Building – Boring L10**

The soil sample collected from boring L10 at 0 to 1 feet bgs had a reported concentration of lead (at 420 mg/kg) above the Table A ESLs (Figure 4, Table 2). Step-out and step-down samples had reported concentrations of lead below the Table A ESLs (Figure 4), so additional analysis for the vertical and lateral extent of lead was not necessary.

### **16331 Site Building – Boring L13**

Lead was reported above Table A ESLs in the surficial (0 to 1 foot bgs) soil sample collected at Boring L13; however, it was reported below Table A ESLs in the 1 to 2 foot bgs sample from Boring L13. Lead was reported below the Table A ESLs for step-out samples collected to 1 foot bgs within 2.5 feet of L13, so the lateral and vertical extent of lead impacts was characterized.

Arsenic was reported above the Table A ESLs and the Duverge background level in the surficial soil sample collected at boring L13A; however, arsenic was reported below the Duverge background level in the step-out samples collected to 1 foot bgs within 2.5 feet of L13, so the lateral extent of arsenic impacts was characterized.

Surficial step-out samples collected during the Supplemental Phase II ESA indicated concentrations of TPHd and TPHmo, up to 1,200 mg/kg and 4,500 mg/kg, respectively, within a five foot radius of Boring L13. Based on these results, further sampling to define the lateral and vertical extent of TPHd and TPHmo impacts were recommended, and the analytical results from this sampling event are discussed in the Additional Supplemental Sampling section below.

### **3.7. Site Meeting**

Ninyo & Moore met with Mr. Brian Saliman from the RCD and Mr. Jerry Wickham from the ACEH on September 10, 2013 to discuss potential additional site sampling as well as a potential remediation strategy. Mr. Wickham recommended that, in addition to the step-out sampling recommended in Ninyo & Moore's Supplemental Phase II ESA Report, soil

---

samples should be collected adjacent to the 2-foot diameter water cistern (Figure 6) and within the former known UST tank pit location (Figure 2) and, due to the presence of elevated lead concentrations to 3 feet bgs in the property adjacent to the northwestern section of the site, soil samples previously collected in the carport area from 1 to 2 feet bgs be analyzed for Title 22 Metals. The group also discussed sampling an existing stockpile observed near the site entrance and future stockpiles generated during utility trenching activities on Kent Avenue.

#### **4. ADDITIONAL SUPPLEMENTAL SAMPLING AND LABORATORY ANALYSIS**

On September 25, 2013, Ninyo & Moore advanced two borings using a Geoprobe rig to 8 feet bgs adjacent to the 2-foot diameter water cistern and in the former UST tank pit (Figure 2) and advanced eight borings to 4 feet bgs by hand auger in the vicinity of boring L13 (Figure 5).

Soil samples from step-out borings L13-S15, L13-S5B, L13-N2.5-E10, L13-S7.5-E10, L13-S7.5-E20, L13-S7.5-E30, L13-S7.5-W10, and L13-S7.5-W20 in the vicinity of boring L13 from 0 to 1 feet bgs and 1 to 2 feet bgs as well as one sample from 2 to 3 feet bgs were analyzed for TPHd and TPHmo by EPA Method 8015M with silica gel cleanup (Table 1 and Figure 5). Soil samples from 3 to 4 feet bgs and 7 to 8 feet bgs from boring C1 adjacent to the 2-foot diameter cistern were analyzed for TPHg, TPHd, and TPHmo by EPA Method 8015M with silica gel cleanup, volatile organic compounds (VOCs) by EPA Method 8260B, Title 22 Metals by EPA Method 6010B, and OCPs by EPA Method 8081 (Tables 1 and 2). Soil samples from 3 to 4 feet bgs and 7 to 8 feet bgs from boring U1 in the former UST tank pit were analyzed for TPHg, TPHd, and TPHmo by EPA Method 8015M with silica gel cleanup, VOCs by EPA Method 8260B, and Title 22 Metals by EPA Method 6010B (Tables 1 and 2). Previously collected soil samples CP1-1-2, CP2-1-2, and CP3-1-2 in the Carport Area were suspected to be impacted with metals, particularly lead, based on metals impacts reported at the north-adjacent property and were subsequently analyzed for Title 22 Metals by EPA Method 6010B (Table 2 and Figure 3). Reported concentrations of COCs were compared to the Table A ESLs and, in addition, reported concentrations of arsenic were compared to the Duverge background levels for arsenic (Duverge, 2011).

#### **4.1. Boring L13 Additional Soil Sample Results**

- Soil samples collected from 0 to 1 feet bgs and 1 to 2 feet bgs in borings L13-N2.5-E10 and L13-S7.5-E30 had reported concentrations of TPHd and TPHmo below the Table A ESLs which delineated the impacts to soil to the north and east of boring L13.
- Soil samples collected from 1 to 2 feet bgs and 2 to 3 feet bgs in boring L13-S5B had reported concentrations of TPHd and TPHmo below the Table A ESLs which delineated the vertical extent of impacts to 1 foot bgs in this area.
- Surficial (0 to 1 feet bgs) soil samples in borings L13-S7.5-E10, L13-S7.5-E20, L13-S7.5-W10, and L13-S7.5-W20 had reported concentrations of TPHd and TPHmo above the Table A ESLs. The lateral surficial soil extent of TPH impacts to the east L13-S7.5 was defined by L13-S7.5-E30; however the lateral extent to the west is still undefined. Soil samples collected from 1 to 2 feet bgs in these borings had reported concentrations of TPHd and TPHmo below the Table A ESLs which delineated the vertical extent of impacts to 1 foot bgs in these areas.
- Soil samples collected from 0 to 1 feet bgs and 1 to 2 feet bgs in borings L13-S15 had reported concentrations of TPHd and/or TPHmo above the Table A ESLs.

#### **4.2. Cistern Soil Sample Results**

- Soil samples collected from 3 to 4 feet bgs and 7 to 8 feet bgs in borings C1 had reported concentrations of TPHg, TPHd, TPHmo, VOCs, OCPs and Title 22 Metals below the Table A ESLs with the exception of reported concentrations of arsenic which were above the Table A ESLs. However, the reported concentrations of arsenic in samples from boring C1 were below the Duverge background level.

#### **4.3. Former Known UST Area Soil Sample Results**

- Soil samples collected from 3 to 4 feet bgs and 7 to 8 feet bgs in borings U1 within the known former UST area had reported concentrations of TPHg, TPHd, TPHmo, VOCs, and Title 22 Metals below the Table A ESLs with the exception of reported concentrations of arsenic which were above the Table A ESLs. However, the reported concentrations of arsenic in samples from boring U1 were below the Duverge background level.

#### **4.4. Carport Area Additional Sample Analytical Results**

- Arsenic was reported in soil samples CP1-1-2, CP2-1-2, and CP3-1-2 at concentrations above the Table A ESLs, but below the Duverge background level. Other Title 22 Met-

---

als, including lead, were either not detected above laboratory reporting limits or reported concentrations were below the Table A ESLs.

#### **4.5. Additional Supplemental Sampling Conclusions and Recommendations**

Based on the results of the soil sampling, our recommendations include:

- Soil south of the site building and garden at the 16331 property should be excavated to 1 foot bgs, with the exception of the area adjacent to soil boring L13-S15 as shown on Figure 5. A confirmation sample is recommended on the western excavation boundary in this area because of the failure of sample L13-S7.5-W20.
- Soil in the vicinity of L13-S15 should be excavated to 3.0 feet bgs as shown on Figure 5. The northern boundary of the 3 foot excavation will be between the closest northern sample (L13-S7.5) and L13-S5, which have elevated TPHd/mo concentrations in the surficial samples. Sidewall confirmation samples should be collected at 2 feet bgs from the north, east, and west sidewalls of the 3 feet bgs excavation (Figure 5). A bottom confirmation sample should be collected at 3.0 feet bgs from an area near the center of the 3 feet bgs excavation (Figure 5).

### **5. NATURE AND DISTRIBUTION OF IMPACTED SOIL**

Laboratory analytical results have indicated concentrations of TPHd, TPHmo, lead and arsenic detected in shallow soil on the property at levels exceeding regulatory guidance (Figures 3 through 5 and Tables 1 and 2). The regulatory guidelines used as a reference for cleanup goals for the site are Table A ESLs and the proposed upper estimate for background arsenic within undifferentiated urban flatland soils (Duverge, 2011). An evaluation of areas of soil impacted with constituents of concern at concentrations above the Table A ESLs is presented below.

#### **5.1. Carport Area – Boring CP3**

A carport is present on the northwestern portion of the site where cars were parked on gravel or bare soil. During the 2013 Ninyo & Moore Phase II ESA and Supplemental Phase II ESA, soil samples collected from this area revealed concentrations of lead, TPHd, and TPHmo in the shallow soil of boring CP3 which exceeded the Table A ESLs. Step-out and a step-down soil borings (CP3-N5, CP3-S5, CP3-E5, CP3W5, and CP3A) were advanced around boring CP3 during the 2013 Supplemental Phase II activities to evaluate the vertical and lateral ex-

tent of the impacts. Analytical results from the step-out and step-down borings revealed concentrations of TPHd, TPHmo, and lead below the Table A ESLs, suggesting that the impacts were shallow and localized in the vicinity of boring CP3 (Figures 2 and 3, Tables 1 and 2).

### **5.2. 16331 Site Building – Boring L10**

The 16331 site building on the southeastern portion of the site was constructed prior to the ban on lead based paint. During the 2013 Ninyo & Moore Phase II ESA and Supplemental Phase II ESA, a soil sample collected from the northwest side of the 16331 site building revealed a concentration of lead in the shallow soil of boring L10 which exceeded the Table A ESL. Step-out and a step-down soil borings (L10-N2.5 and L10A) were advanced around boring L10 during the 2013 Supplemental Phase II activities to evaluate the vertical and lateral extent of the impacts. Analytical results from the step-out and step-down borings revealed concentrations of lead below the Table A ESL, suggesting that the impacts were shallow and localized in the vicinity of boring L10 (Figure 4, Table 2).

### **5.3. 16331 Site Building – Boring L13**

The 16331 site building on the southeastern portion of the site was constructed prior to the ban on lead based paint. In addition, cars were parked on bare soil on a driveway/parking area on the south side of the 16331 site building, and mechanical debris was observed in the yard south of the site building. The 2013 Ninyo & Moore Phase II ESA and Supplemental Phase II ESA reported that soil samples collected from the southeast side of the 16331 site building revealed concentrations of lead, arsenic, TPHd, and TPHmo in the shallow soil of boring L13/L13A which exceeded the Table A ESLs. Analysis of step-out samples for lead and arsenic revealed concentrations of lead below the Table A ESLs and arsenic below the Duverge background level, suggesting that the lead and arsenic impacts were shallow and localized in the vicinity of boring L13/L13A. Analysis of step-out and a step-down soil borings reported concentrations of TPHd and TPHmo above the Table A ESLs up to 20 feet to the east and west and up to 15 feet to the south of boring L13/L13A. In addition, concentrations of TPHd and TPHmo above the Table A ESLs were reported in soil samples at 2 feet

---

bgs in boring L13-S15 (Figures 2 and 5, Table 1 and 2). The extent of lateral TPHd/mo impacts to surficial soil has been defined to the north and east; however, has not been defined to the west (due to sample failure) or south-central area (due to the site boundary), and the vertical impacts have not been defined within the vicinity of borings L13-S15, especially within the area between borings L13-S15 and L13-S5B.

## **6. IRAP**

Removal action is required by ACEH in cases where site contaminants potentially threaten human or ecologic receptors. In the case of the subject site, the potential threat exists as petroleum hydrocarbons, lead, and/or arsenic in soil at discrete locations on the site. The concentrations of petroleum hydrocarbons, lead, and/or arsenic and the proximity of impacts to the soil surface pose a potential hazard to site users. The task elements associated with the removal action are described in this section.

### **6.1. Pre-Project Activities**

The removal action will involve both on-site (removal) and off-site (transport and disposal) task elements. To ensure the safety and protection of site workers and off-site populations, the existing Health and Safety Plan shall be updated by Ninyo & Moore with removal action-specific information prior to the implementation of the removal action. This document shall detail all protective measures to be implemented during the removal action, including protective gear and training requirements for site workers, dust and noise control during on-site activity. The removal action contractor, Branagh, will prepare a traffic control plan detailing excavation areas, decontamination areas, routes of travel across the site, and truck routes of travel off-site.

All necessary permits and notifications will be obtained/submitted prior to the start of the removal action including a well destruction permit from Alameda County Public Works Agency (ACPWA) for abandonment of the 2-foot diameter water cistern and notification of BAAQMD of the removal action. ACEH will be notified at least 5 working days in advance

---

of excavation activities on site. The removal action contractor, Branaugh, will clear the site of brush and equipment prior to the removal action.

## **6.2. Targeted Removal**

Targeted removal will be conducted to address areas of impacted soil which may impact human health. Targeted removal of impacted soil will be conducted by excavating the impacted soil using a rubber-tire backhoe or a tracked excavator at the beginning stages of site construction activities. Excavation will continue laterally and vertically until the designated lower and outside bounds are encountered. The excavation will be continued until the side-walls and bottoms are visually clean and free of odors. Confirmation samples will be collected from areas where impacts have not been completely delineated as detailed in Section 6.3. Excavated soils will be loaded directly into trucks for transportation to licensed disposal facilities under waste manifest. The excavation will not extend beyond the property boundaries. In order to ensure that the remedial excavations are properly located surrounding the boring locations of concern, a GPS survey unit will be used to designate the locations of the original borings. The locations of the remedial excavations are presented in Figures 3, 4, 5, and 6 and discussed in more detail below.

### **Carport Area – Boring CP3**

Concentrations of TPHd, TPHmo, and lead in samples collected from 0 to 1 and 1 to 2 feet bgs were detected above the Table A ESLs in boring CP3, located in the carport area. The deeper sample collected from 2 to 3 feet bgs at CP3A, adjacent to this boring, and samples collected from step-out samples between the surface and 2 feet bgs reported TPHd/mo and lead concentrations below the Table A ESLs. An excavation will remove soil impacted with TPHd, TPHmo and lead above the Table A ESLs down to 3 feet bgs in the area of boring CP3. The excavation will be approximately 5 feet by 5 feet with a volume of approximately 3 cubic yards. Because the waste extraction test (WET) indicated that soluble lead was greater than the soluble threshold limit concentration (STLC) ( or non-hazardous waste limit) of 5.0 milligrams per liter (mg/L), excavated soil from 0 to 3 feet bgs should be loaded

---

into a 3-cubic yard bin and transported to a Class I landfill facility by a licensed waste transporter under manifest as California hazardous (non-RCRA) waste pending waste profile acceptance.

### **16331 Site Building – Boring L10**

Lead was reported in a surficial soil sample above the Table A ESL in boring L10, located on the northwest side of the 16331 site building. The deeper sample collected from 1 to 2 feet bgs in this boring and the step-out sample had concentrations below the Table A ESL. Based on the lead in soil results, our proposed excavation area includes an approximately 5 foot by 5 foot area to a depth of 2 feet bgs in the vicinity of L10. The volume of the excavated material will be approximately 2 cubic yards. Excavated soil from 0 to 2 feet bgs should be included in the L13 stockpile.

### **16331 Site Building – Boring L13**

Concentrations of lead, arsenic, TPHd and TPHmo were detected above the Table A ESLs and Duverge background levels in samples collected from boring L13/L13A and step-out and step-down borings located on the southeast side of the 16331 site building. An excavation will remove impacted soil down to 2 foot bgs in the area depicted on Figure 5, which is approximately 1,400 square feet and 100 cubic yards. Additional excavation to 3-feet bgs is recommended for the area between borings L13-S15 and L13-S7.5 and extending approximately 7 to 8 feet laterally on the east and west sides of the borings.. The excavation area and volume will be approximately 150 square feet and 5 cubic yards. All excavated soil should be stockpiled for waste profiling sampling (Section 6.5). With waste profile acceptance, the stockpiled soil should be loaded onto trucks and transported to a Class II or III landfill by a licensed waste transporter under a non-hazardous waste manifest.

### **6.3. Site Monitoring**

This section presents a general protocol for monitoring during site construction and grading activities where impacts to site soils are either unknown, known or suspected.

Given the potential nature of releases at the site to have been episodic and to have occurred at multiple locations, including the Carport and L13 Boring (16331 Building) areas, there is the potential for encountering impacted soils during demolition, excavation, or grading activities within these and other site areas. Because of this concern, excavation and grading activities within the Carport and the 16331 Building areas will be monitored by an environmental professional (EP) under the supervision of a California Professional Geologist (PG) or Engineer (PE). Soils will be monitored for obvious signs of contamination, including discoloration, staining or odors. If odors are noted in soil, a photoionization detector (PID) will be used by the EP to measure levels of organic compounds, which will be compared to action levels for site workers and occupants contained in the site specific Health and Safety Plan. Screening results will be recorded in daily field logs.

If soil contamination (i.e. organic vapors) exceeds action levels, work will be halted, and the contractor and RCD will be notified of existing conditions, and an evaluation will be made by Ninyo & Moore and RCD regarding required personal protective equipment (PPE) for site personnel and/or engineering controls (ECs) to be used to mitigate potential worker health and safety issues. The ACEH will also be informed of the site impacts and mitigation measures. Once site impacts have been mitigated to below worker safety guidelines, work will continue on site

If hazardous substances or conditions are encountered which present an immediate threat of injury to human health or water quality, the Contractor shall secure the area and shall notify Ninyo & Moore and/or the Owner's Representative immediately. The Contractor shall call "911" to summon the emergency services, as necessary.

If previously unknown hazardous substances or conditions are encountered that do not present an immediate threat to human health or the environment, the Contractor shall immediately notify Ninyo & Moore, and the RCD. As necessary, the area surrounding the discovery of unknown contamination will be isolated and secured by the Contractor with markings, fencing, or a suitable barrier so that construction activities can be excluded from

the zone of impact. Ninyo & Moore, the contractor and the RCD, will then decide whether immediate excavation, segregation, stockpiling, containerization, and/or other activities are warranted.

#### **6.3.1. Odor and Vapor Control**

There is a potential to generate odors during construction activities, including during excavation and management of temporarily stockpiled contaminated materials. The Contractor shall employ odor suppression techniques, such as 6-mil plastic cover or spray-on vapor/odor suppressants, to mitigate impacts to site workers and visitors. If the appropriate suppression techniques are used, local businesses and site areas outside of the construction zone should not be impacted by vapor and/or odors potentially generated during site development or redevelopment activities. If stockpiles and/or open excavations are a source of odors, the Contractor shall cover them with a minimum of 6-mil plastic prior to leaving the site at the end of each workday.

#### **6.3.2. Dust Control**

The Contractor will mitigate dust with water, either with a hand held sprayer or by water trucks, as needed, on the surface of active work areas. Care will be exercised to minimize the overuse of water so as not to create surface water runoff or excessively saturated conditions. Dust control will also be conducted at the site entrance during project work at the site, and in areas associated with potential excavation and stockpiling of soil.

### **6.4. Over-excavation and Confirmation Sampling**

Areas of known contamination include the Carport and 16331 Building areas (Borings L10 and L13). If contamination is observed in known or unknown areas during excavation and grading activities, soil shall be over-excavated until sidewalls and bottoms are visually clean and free of obvious staining and odor, and PID screening levels are below action levels. Contaminated soil will be stockpiled for disposal as described in Section 6.6.

---

Subsequent to excavation of contaminated soil, confirmation soil samples will be collected from sidewall and bottom areas from the 16331 Building area and other site areas (see below) where unknown impacts to soil are observed during excavation and grading activities. Additional soil samples or alternate depths and locations of soil sampling may be required if requested by the ACEH field inspector. Samples will be collected using reusable stainless steel or disposable trowels. The reusable trowels will be decontaminated between sample locations using a triple rinse method consisting of a rinse with distilled water, followed by a rinse with an appropriate detergent solution, followed by a final rinse with distilled water. Disposable trowels will be disposed of in the same manner as other general debris on site.

**Carport Area – Boring CP3 No Confirmation Sampling .** Confirmation samples will not be collected from this area unless previously unknown contamination is encountered and over-excavation is performed because the limits of contamination were delineated during previous sampling activities as described in Section 5.

**16331 Building Area – Boring L10 No Confirmation Sampling.** Confirmation samples will not be collected from this area unless previously unknown contamination is encountered and over-excavation is performed because the limits of contamination were delineated during previous sampling activities as described in Section 5.

**16331 Building Area – Boring L13 Confirmation Sampling.** Sidewall confirmation samples will be collected between the surface and 3 feet bgs from the north, east, and west sidewalls of the L13-S15/L13-S7.5 excavation and at 1 foot bgs from the west sidewall near boring L13-S7.5-W20 and east sidewall between L13-S7.5-E20 and L13-S7.5-E30 (Figure 5). Sidewall samples will not be collected from the northern or southern 2-foot bgs excavation boundaries due to physical obstacles. A bottom confirmation sample will be collected at 3.0 feet bgs within the center of the L13-S15/L13-S7.5 excavation (Figure 5). Confirmation samples from the boring L13 excavation will be analyzed for TPHd and TPHmo using EPA Method 8015M.

**Unknown Areas of Contamination Confirmation Sampling** If contaminated soil is encountered in areas previously suspected to be free of impacts, sidewall confirmation samples will be collected at a rate of one lateral sample per 25 linear feet of sidewall at a depth midway between the surface and excavation bottom. Bottom confirmation samples will be collected at the intersections of a 50-feet by 50-feet grid centered on the excavation. Confirmation samples will be analyzed for TPHg, TPHd, and TPHmo by EPA Method 8015, VOCs by EPA Method 8260B, and Title 22 Metals by EPA Method 6010/7471.

Once the confirmation samples are collected, the sample containers will be prepared for transport to the analytical laboratory. The samples will be identified with the project name, location, sample location number, sample depth, sampling date/time, and sampler's initials, and will be placed into plastic bags and stored in an insulated ice chest containing ice for transport to the analytical laboratory with completed Chain-of-custody documentation.

Because the targeted removal activities will commence at the beginning phase of site construction activities, and there may be a need (based on confirmation sample results) to over-excavate additionally impacted soils, the confirmation samples will be analyzed within a 24-hour turnaround time. Sampling operations will be coordinated by an EP under the direction of a Ninyo & Moore California-State Professional Geologist or Engineer.

## **6.5. Groundwater**

The excavations discussed above are not planned to extend deeper than 2.5 feet bgs, therefore it is not anticipated that groundwater would be encountered during excavation activities.

## **6.6. Soil Stockpile Storage and Stockpile Sampling**

### **Stockpile Storage**

Soil to be excavated from the utility trench in Kent Avenue and the Boring L13 area excavation will be placed on plastic liners to prevent leaching of potential contaminated soil to the

site. Soil from the utility trench in Kent Avenue which appears to be free of impacts (no physical signs of contamination, including staining or odors) will be segregated in a separate stockpile from material which appears to be impacted. A berm will be constructed around the stockpiles to prevent water from draining out of the excavated soil and onto the surrounding soil surface. The stockpiles will be covered with plastic to prevent wind blown dust and infiltration of rainwater after the end of each work day.

### **Soil Stockpile Profiling for Disposal**

Four discrete soil samples will be collected per every 500 cubic yards (cy) from soil stockpiled and stored on site for landfill transport and disposal. The samples will be labeled and identified, and forwarded to a NELAP and state certified environmental laboratory under completed Chain of Custody documentation following the procedures discussed in Section 6.4 above. Once received by the laboratory, the sample will be combined into a four-point composite for analysis. of known and suspected COC, including, but not limited to, TPHg, TPHd, and TPHmo by EPA Method 8015M; Title 22 Metals by EPA Method 6010B/7471; and benzene, toluene, ethylbenzene, and xylenes by EPA Method 8260B. If requested by the disposal facility, additional analyses will be conducted for waste disposal profiling.

### **Soil Stockpile Sampling for Reuse**

The stockpiled soil from the proposed trench excavation in Kent Avenue will be sampled for potential reuse at a rate of one 4-point composite sample for every 50 cubic yards. Expedited laboratory analysis may be requested if necessary. If the soil is determined to be contaminated and not suitable for reuse, the analytical results will be used for waste profiling purposes. Waste profiling (for disposal) instructions are discussed above. The samples from the stockpiled soil from the future trench excavation in Kent Avenue will be analyzed for TPHg, TPHd, and TPHmo by EPA Method 8015M; Title 22 Metals by EPA Method 6010B/7471; and benzene, toluene, ethylbenzene, and xylenes by EPA Method 8260B.

The existing stockpile of unknown origin located adjacent to the Kent Avenue entrance to the site will be sampled for potential reuse at a rate of one 4-point composite sample for

every 50 cubic yards of homogeneous soil. Expedited laboratory analysis may be requested if necessary. If the soil is determined to be contaminated and not suitable for reuse, the analytical results will be used for waste profiling purposes. The samples from the existing stockpile of unknown origin will be analyzed for TPHg, TPHd, and TPHmo by EPA Method 8015M; Title 22 Metals by EPA Method 6010B/7471; VOCs by EPA Method 8260B; asbestos by California Air Resources Board (CARB) Level A-400; semivolatile organic compounds (SVOCs) by EPA Method 8270, PCBs by EPA Method 8082; OCPs by EPA Method 8081; organophosphorous pesticides by EPA Method 8141; and chlorinated herbicides by EPA Method 8151. If present, debris and construction material will be segregated from the stockpile prior to reuse..

## **6.7. Water Cistern Abandonment**

The two-foot diameter water cistern will be abandoned in accordance with ACEH directives and ACPWA permit requirements. If the total depth of the cistern is 12 feet bgs or less, it should be abandoned by excavating around the cistern to the total depth of the cistern, demolishing and removing the brick walls of the cistern, and then backfilling the excavation with clean fill. If the total depth of the cistern is greater than 12 feet bgs, then the bottom of the cistern should be broken or removed, the brick walls of the cistern should be demolished and removed to 5 feet bgs, the cistern should be backfilled with grout from total depth to 5 feet bgs, and backfilled with clean fill from 5 feet bgs to the surface.

## **6.8. Potential Water Well**

The potential presence of a water well was identified at the 16331 site building (RGA, 2011). Water wells were not observed at the site; however, if a water well is encountered during the removal action or subsequent grading activities, then ACEH should be notified and a well destruction permit should be acquired from ACPWA. Any water wells encountered at the site should be abandoned after consulting with ACPWA and determining proper abandonment procedure based on the details of the well construction.

## **6.9. Potential USTs**

The potential presence of USTs was identified at the 16325, 16327, and 16331 Kent Avenue site buildings (RGA, 2011). *These USTs are reportedly in a different location than the known UST that was previously removed, and where soil samples were collected during the Additional Supplemental Phase II ESA activities as discussed in Section 4.3 above.* During a reconnaissance conducted by Ninyo & Moore, the USTs were not observed at the site; however, if USTs are encountered during the removal action or subsequent grading activities, then ACEH should be notified and a UST removal permit should be obtained. Any USTs encountered at the site should be abandoned in accordance with ACEH directives by removing the contents, triple rinsing, inerting, and excavating the UST, and removing the UST piping. The UST and associated piping should be transported to a licensed recycler for disposal. Soil and groundwater samples should be collected and analyzed for COC. With ACEH approval, the UST excavation should be backfilled with clean fill from total depth to the surface.

## **6.10. Backfilling Excavations**

Areas of impacted soil on site where targeted removal will occur (Borings L10, L13 and Carport areas) will not be immediately backfilled because planned site-wide grading activities conducted by the General Contractor will remove soil down to 3 feet bgs. The site will be backfilled according to the RCD approved site Grading Plan, which will be provided to the ACEH independent of this IRAP.

## **6.11. Dust Control**

Dust suppression will be accomplished by lightly spraying or misting stockpiled soil, truck loading areas on site, and the work areas with water. Misting may also be used on soil placed in the transport trucks. Misting will be performed sufficiently to reduce dust and vapors emissions but in small enough quantities so as to avoid puddling and runoff. In addition, efforts will be made to minimize the soil drop height from the excavator's bucket onto the soil pile or into the transport trucks. After the soil is loaded into the transport trucks, the soil will

be covered to prevent soil from spilling out of the truck during transport to the disposal facility.

While on the property, all vehicles will maintain slow speeds (i.e., less than 5 miles per hour [mph]) for safety purposes and for dust control measures. Prior to departure, transport and dump trucks will be cleaned by the remediation contractor of loose debris clinging to the sides and/or wheels using dry brooms or brushes to minimize off-site contaminant mobilization. Ninyo & Moore will oversee vehicular decontamination activities and inspect vehicles before they exit the site. If conditions warrant, a street sweeper may be retained to sweep the local street route.

In the event of sustained wind speeds that cause visible fugitive emissions, soil-moving activities will be temporarily halted until sufficient dust control agent is applied to reduce such emissions. In the event wind speeds exceed 25 mph for more than 30 minutes and visible emissions are observed, soil-moving activities will be halted until wind speeds decrease and no visible emissions are observed.

In areas where soil is stockpiled, excavated soil will be placed on, and covered with, 10-mil plastic sheets anchored in place using sandbags and rocks.

## **6.12. Traffic Plan**

An on site route will be designated by Branagh for truck traffic during loading and off-hauling activities. This will involve traffic control at the site, including truck staging, speed control, truck routes, and an entry/exit location. Trucks will enter and exit from the single access point to the site which is located on Kent Avenue. Because the entry/exit location is in an area of minimal traffic, there is likely no need for traffic control measures at the entry/exit location.

### **6.13. Decontamination Plan**

For soil excavation and off-hauling activities, a decontamination area will be set up at the entry/exit location on Kent Avenue or as directed in Branagh's transportation plan. Large equipment and vehicles requiring decontamination include excavation equipment, soil loading equipment, and off-site disposal trucks. Dry decontamination procedures will be used primarily. If water is used, the wash water will be collected in a tank and fluids will be tested and hauled off-site for appropriate disposal or recycling/reuse. Prior to departure, the off-site disposal trucks will move to a decontamination area where loose soil will be removed by the remediation contractor via dry brushing of the tires and truck body. Trucks will be inspected by Ninyo & Moore personnel to ensure proper decontamination has been performed prior to the trucks leaving the site. The loading and decontamination areas will be swept after each vehicle has departed to minimize affected soil contacting the tires of the next vehicle. At the end of each day, each soil hauling and loading vehicle will be swept down in the decontamination area. Branagh will develop a transportation plan detailing decontamination activities that will be submitted to Ninyo & Moore for review prior to the start of transportation activities.

## **7. SCHEDULE**

Upon approval from ACEH, the activities described above will commence. The targeted removal activities will take place during the redevelopment construction of the site. The targeted removal activities will be the first step in the site redevelopment and is estimated to take up to 5 days to complete because analytical results from confirmation sampling may indicate that additional excavation and sampling activities are required.

## **8. REPORTING**

A completion report will be prepared following the execution of the above-described activities. The report will include a description of the activities performed and any deviations from the IRAP. Confirmation sample analytical data will be tabulated and shown on figures. Manifests

and disposal receipts will be included as attachments, as will any required compaction documentation.

## **9. LIMITATIONS**

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

This report is intended exclusively for use by the client. Any use or reuse of the findings, conclusions, and/or recommendations of this report by parties other than the client is undertaken at said parties' sole risk.

## 10. SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

Kris M. Larson, PG 8059  
Principal Environmental Geologist

## 11. QUALIFICATION OF ENVIRONMENTAL PROFESSIONAL

Mr. Larson states that the IRAP was prepared under his direct supervision, that he has reviewed and approved the report, and that the methods and procedures employed in the development of the report. Mr. Larson certifies that Ninyo & Moore project personnel and subcontractors are properly licensed and/or certified to do the work described herein.

Notes:

TPH = Total Petroleum Hydrocarbons by EPA Method 8015B

PCBs = Polychlorinated Biphenyls by EPA Method 8082

PAHs = Polynuclear Aromatic Hydrocarbons by EPA Method 8270-SIM

VOCs = volatile organic compounds analyzed by EPA Method 8260B

OCPs = Organochlorinated pesticides analyzed by EPA Method 8081

ESLs = San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels - Shallow Soils (0m bgs) - Where Groundwater IS a current or potential source of drinking water (May 2013, Table A)

mg/kg = milligrams per kilogram

µg/kg = micrograms per kilogram

1 - Composite 1 was composed by the laboratory from soil samples CP1-0-1, CP2-0-1, CP3-0-1, and CP4-0-1

2 - Composite 2 was composed by the laboratory from soil samples OG1-0-1, OG2-0-1, OG3-0-1, and OG4-0-1

3 - Composite A was composed by the laboratory from soil samples G1-0-1, G2-0-1, and G3-0-1

4 - Composite B was composed by the laboratory from soil samples G4-0-1, G5-0-1, and G6-0-1

5 - Composite C was composed by the laboratory from soil samples G7-0-1, G8-0-1, and G9-0-1

6 - Composite D was composed by the laboratory from soil samples G1-1-2, G2-1-2, and G3-1-2

7 - Composite E was composed by the laboratory from soil samples G4-1-2, G5-1-2, and G6-1-2

8 - Composite F was composed by the laboratory from soil samples G7-1-2, G8-1-2, and G9-1-2

**Bold** indicates the concentration is above the residential ESL.

Shaded indicates the concentration is above the commercial/industrial ESL.

-- Not Analyzed

NA - Not Applicable

NE - Not Established

bgs - below ground surface

ND - Not detected above various laboratory detection limits

<X indicates concentration not detected above the laboratory detection limits of X

Notes:

Metals analyzed by EPA Method 6010B except mercury which was analyzed by EPA Method 7471.

STLC - soluble threshold limit concentration

TCLP - toxicity characteristic leaching procedure

\* - Soil sample CP3-0-1 was collected and placed on hold during the previous Phase II ESA and selected for analysis during the Supplemental Phase II ESA.

1 - Composite 1 was composed by the laboratory from soil samples CP1-0-1, CP2-0-1, CP3-0-1, and CP4-0-1

2 - Composite 2 was composed by the laboratory from soil samples OG1-0-1, OG2-0-1, OG3-0-1, and OG4-0-1

3 - Composite A was composed by the laboratory from soil samples G1-0-1, G2-0-1, and G3-0-1

4 - Composite B was composed by the laboratory from soil samples G4-0-1, G5-0-1, and G6-0-1

5 - Composite C was composed by the laboratory from soil samples G7-0-1, G8-0-1, and G9-0-1

6 - Composite D was composed by the laboratory from soil samples G1-1-2, G2-1-2, and G3-1-2

7 - Composite E was composed by the laboratory from soil samples G4-1-2, G5-1-2, and G6-1-2

8 - Composite F was composed by the laboratory from soil samples G7-1-2, G8-1-2, and G9-1-2

9 - Background concentrations taken from Kearney Foundation of Soil Science, *Background Concentrations of Trace and Major Elements in California Soils*, dated March 1996

10 - Proposed upper estimate for background arsenic within undifferentiated urbanized flatland soils (Duverge, 2011)

11 - Results reported in milligrams per liter

**Bold** indicates the concentration is above the residential ESL

Shaded indicates the concentration is above the commercial/industrial ESL

mg/kg - milligrams per kilogram

-- - Not Analyzed

NE - Not Established

NA - Not Applicable

bgs - below ground surface

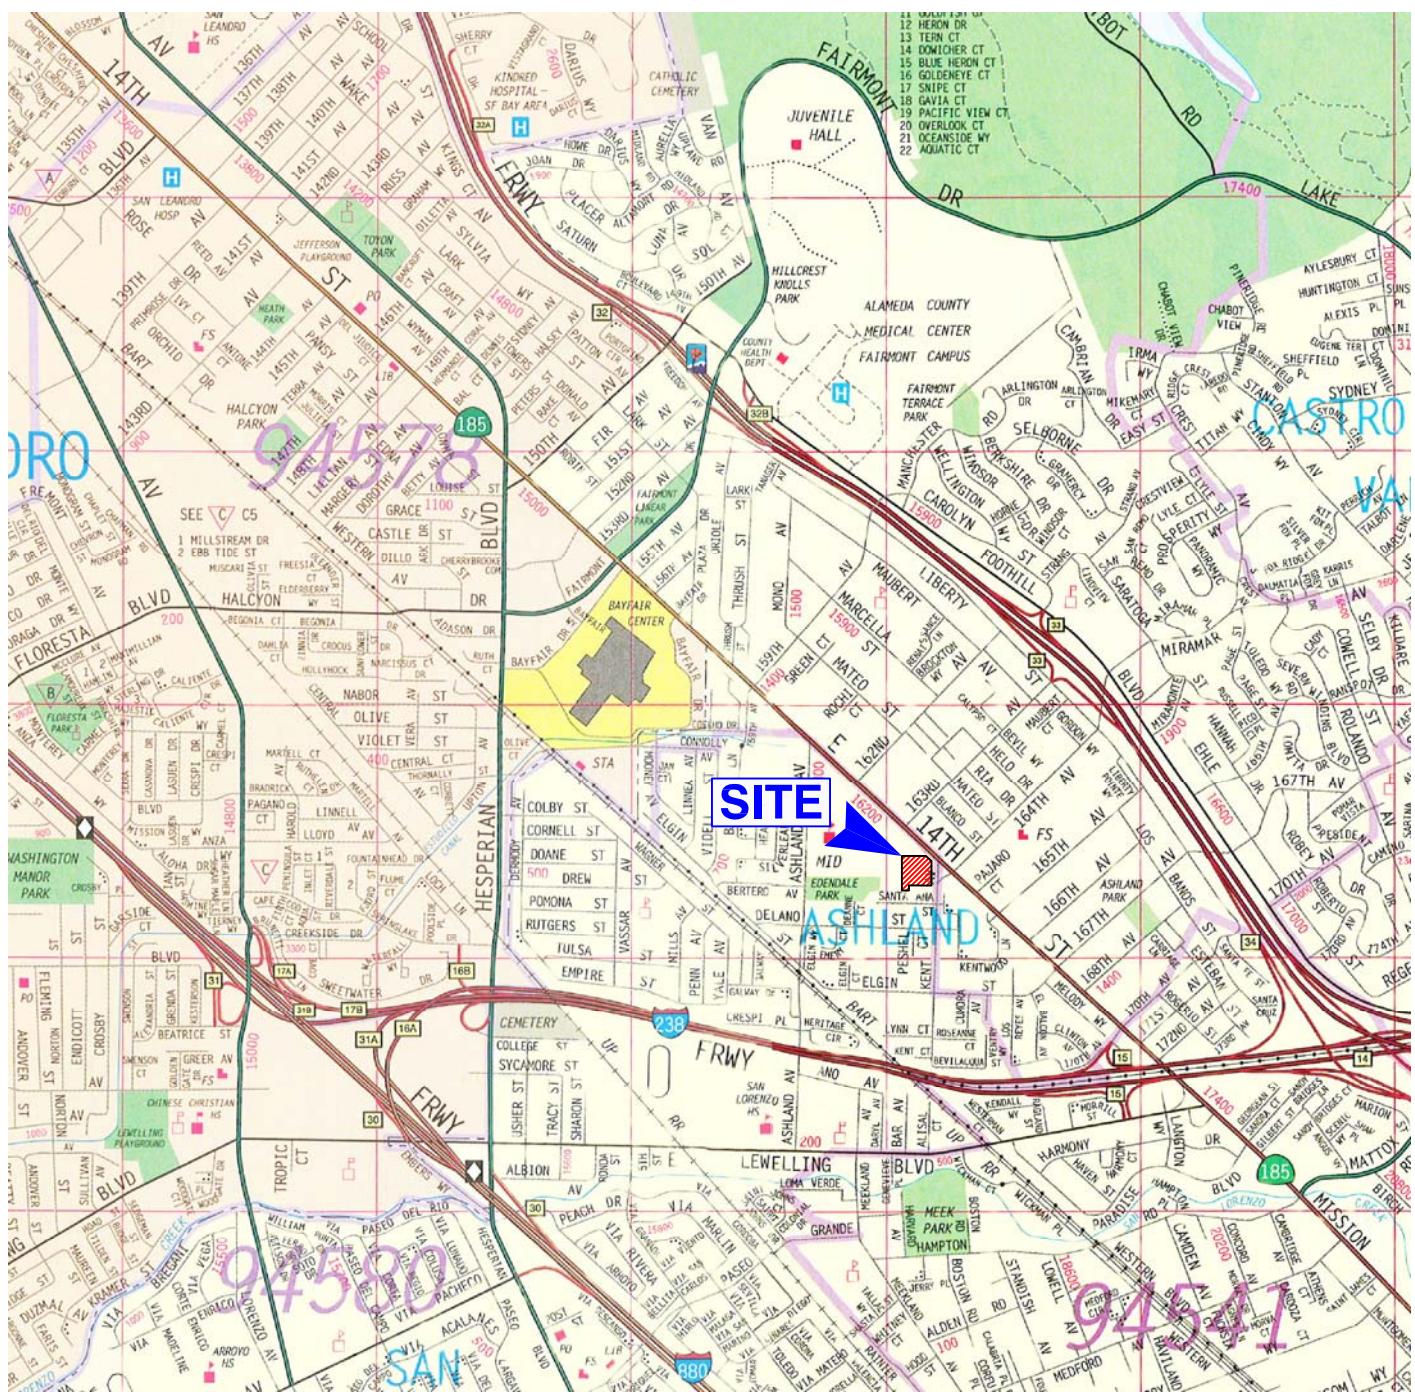

ND<X indicates concentration not detected above the laboratory detection limits of X

FIGURE

## U.S.C.S. METHOD OF SOIL CLASSIFICATION

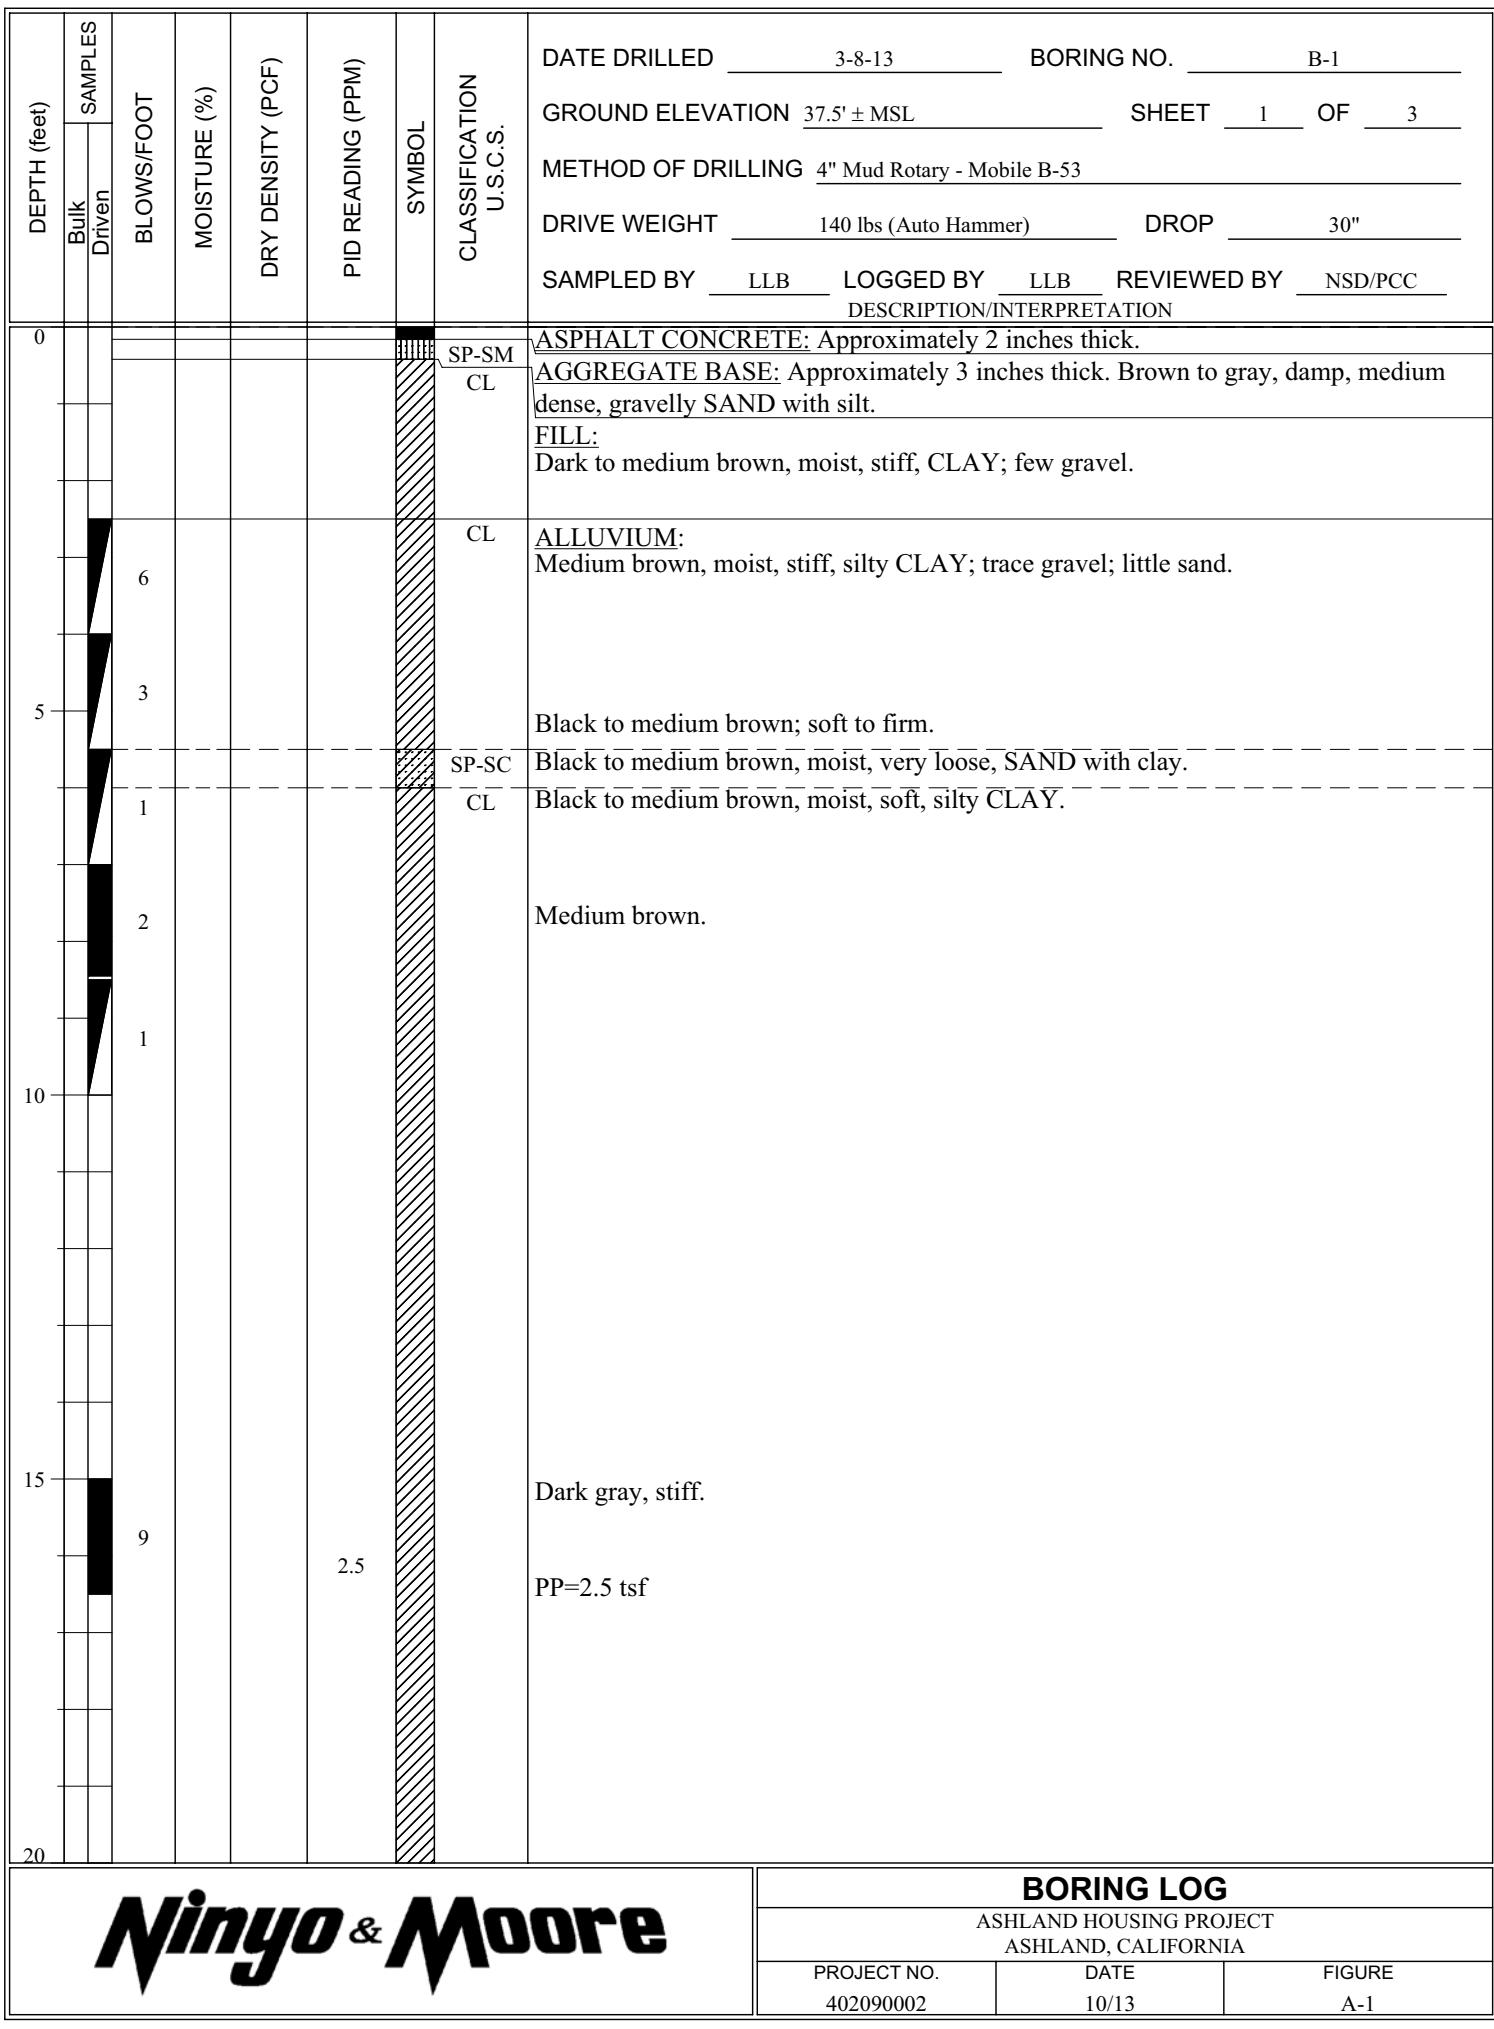

MAJOR DIVISIONS		SYMBOL	TYPICAL NAMES
COARSE-GRAINED SOILS (More than 1/2 of soil >No. 200 sieve size)	GRAVELS (More than 1/2 of coarse fraction > No. 4 sieve size)	GW	Well graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	SANDS (More than 1/2 of coarse fraction <No. 4 sieve size)	SW	Well graded sands or gravelly sands, little or no fines
		SP	Poorly graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (More than 1/2 of soil <No. 200 sieve size)	SILTS & CLAYS Liquid Limit <50	ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean
		OL	Organic silts and organic silty clays of low plasticity
		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
	SILTS & CLAYS Liquid Limit >50	CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silty clays, organic silts
		Pt	Peat and other highly organic soils

GRAIN SIZE CHART		
CLASSIFICATION	RANGE OF GRAIN SIZE	
	U.S. Standard Sieve Size	Grain Size in Millimeters
BOULDERS	Above 12"	Above 305
COBBLES	12" to 3"	305 to 76.2
GRAVEL Coarse Fine	3" to No. 4 3" to 3/4" 3/4" to No. 4	76.2 to 4.76 76.2 to 19.1 19.1 to 4.76
SAND Coarse Medium Fine	No. 4 to No. 200 No. 4 to No. 10 No. 10 to No. 40 No. 40 to No. 200	4.76 to 0.075 4.76 to 2.00 2.00 to 0.420 0.420 to 0.075
SILT & CLAY	Below No. 200	Below 0.075

Re: ATL Work Order Number : 1301538  
Client Reference : Kent Ave, 402090002

Enclosed are the results for sample(s) received on May 24, 2013 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eddie Rodriguez'.

Eddie Rodriguez  
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Conference and/or applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

### Notes and Definitions

S4	Surrogate was diluted out.
S2	Surrogate recovery was below laboratory acceptance limit. Reextraction and/or reanalysis confirms low recovery caused by matrix effects.
S10	Surrogate recovery outside of laboratory acceptance limit possibly due to matrix interference.
S1	Surrogate recovery was above laboratory acceptance limit. No target analyte was detected in the sample.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
E3	Internal standard recoveries did not meet method acceptance.
D2	Sample required dilution due to high concentration of non-target analyte.
ND	Analyte not detected at or above reporting limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA1	CA-NELAP (CDPH)
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.

Hi Rachelle,

Please analyze soil samples CP1-0-1, CP2-0-1, CP3-0-1, and CP4-0-1 for PCBs by EPA Method 8082 and PAHs by EPA Method 8270-SIM.

Thanks,

Peter D. Sims, LEED AP

Enclosed are the results for sample(s) received on May 24, 2013 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eddie Rodriguez'.

Eddie Rodriguez  
Laboratory Director

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

Enclosed are the results for sample(s) received on June 18, 2013 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eddie Rodriguez'.

Eddie Rodriguez  
Laboratory Director

Re: ATL Work Order Number : 1301538  
Client Reference : Kent Ave, 402090002

Enclosed are the results for sample(s) received on May 24, 2013 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eddie Rodriguez'.

Eddie Rodriguez  
Laboratory Director

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

### Notes and Definitions

S4	Surrogate was diluted out.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
ND	Analyte not detected at or above reporting limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA1	CA-NELAP (CDPH)
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.

Hi Peter,

I did not find L13-0-1 in our system, we have sample L13A-0-1, is the same sample?

Rachelle

**From:** Peter Sims [mailto:[psims@ninyoandmoore.com](mailto:psims@ninyoandmoore.com)]

**Subject:** RE: Results - Ashland, 402090002 (ATL# 1302196)

Please analyze sample L13-0-1 for STLC lead and samples L13-0-1, L13-S2.5-0-1, L13-N2.5-0-1, and L13-W2.5-0-1 for TPHd/mo with silica gel cleanup on normal TAT. Please perform extraction for TPHd/mo analysis on samples L13-S5-0-1, L13-S7.5-0-1, L13-N5-0-1, L13-N7.5-0-1, L13-W5-0-1, and L13-W7.5-0-1.

Thank you,

Hi Rachelle,

Please analyze samples L13-N5-0-1, L13-N7.5-0-1, L13-S5-0-1, and L13-S7.5-0-1 for TPHd/mo and sample L13-N2.5-0-1 for arsenic. Turn around time is >36 hours and <48 hours.

Thank you,

Peter D. Sims, LEED AP

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

**Subject:** RE: Final report - Ashland, 402090002 (ATL# 1302196)

Hi Rachelle,

Please analyze samples CP3-N5-0-1, CP3-S5-0-1, CP3-E5-0-1, and CP3-W5-0-1 for lead on rush TAT. Also, please remove the TPHd and TPHmo results without silica gel cleanup for L13A-0-1 from the lab report.

Thanks for handling my multitude of requests on this project!

Re: ATL Work Order Number : 1301806

Client Reference : Ashland Housing Project, 402090002

Enclosed are the results for sample(s) received on June 18, 2013 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eddie Rodriguez'.

Eddie Rodriguez  
Laboratory Director

### Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA1	CA-NELAP (CDPH)
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.

**Subject:** Lab ID 1301538-16 analysis for lead

Rachelle,

Please analyze sample Id number 1301538-16 (CP3-1-2) for total lead using a normal TAT. This sample was submitted on May 24, so if you no longer have it please let me know.

Thanks,

Kris M. Larson, P.G., QSD

Client Reference : Kent Ave, 402090002

Enclosed are the results for sample(s) received on May 24, 2013 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eddie Rodriguez'.

Eddie Rodriguez  
Laboratory Director

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, NELAP and State of Oregon (Air) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. *Advanced Technology Labs - Your Partner for Quality Environmental Testing*

### Notes and Definitions

S4	Surrogate was diluted out.
S1	Surrogate recovery was above laboratory acceptance limit. No target analyte was detected in the sample.
R2	RPD value outside acceptance criteria due to possible matrix interference.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA1	CA-NELAP (CDPH)
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

#### Notes:

- (1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
- (2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.

2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.

3. The following turnaround time conditions apply:

TAT = 0: 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM

TAT = 1: 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)

TAT = 2: 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)

TAT = 3: 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)

TAT = 4: 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)

TAT = 5: NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)

4. Weekend, holiday after-hours work - ask for quote.

5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge

respective to the subcontract (ab -- ask for quote).

6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air

samples will be disposed of after 14 calendar days after receipt of samples.

7. Electronic records maintained for five (5) years from report date.

8. Hard copy reports will be disposed of after 45 calendar days from report date.

9. Storage and Report Fees:

- Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; \$2/sample/month if extended storage or hold is requested.

- Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; \$20/ sample/week if extended storage is requested.

- Hard copy and regenerated reports/EDDs: \$17.50 per hard copy report requested; \$50.00 per regenerated/reforma? ed report; \$35 per reprocessed EDD.

10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.

11. Unanalyzed samples will incur a disposal fee of \$7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.
