Re: Soil Vapor and Indoor Air Investigation Report (Report #4601)
Four Seasons Cleaners; Cleanup Program # RO0003155
13778 Doolittle Ave., San Leandro, California

Dear Mr. Detterman:

At the request of Mr. Ernie Lee, WellTest, Inc. (WTI) has prepared this *Soil Vapor and Indoor Air Investigation Report* for the above-referenced solvent release case (Figures 1 and 2). The purpose of this investigation was to 1.) confirm and further define the extent of soil gas contamination initially identified in a *Limited Phase II Soil, Water, and Soil Vapor Investigation* prepared by PIERS Environmental Services, Inc. (PIERS) for the subject site; and 2.) evaluate the potential cancer risk associated with indoor air exposure based upon the current concentrations of halogenated volatile organic compounds (HVOCs), particularly tetrachloroethene (PCE), in soil gas. In general, the investigation consisted of installing and collecting samples from two five-foot soil gas sampling wells (SG-1A and SG-2A), four subslab soil gas sampling points (VP-1 through VP-4), and collecting indoor and ambient air samples. Additionally, two grab groundwater samples were collected from inside the dry cleaner tenant space.

Recent regulatory directive letters are presented as Attachment A, subsurface drilling permits are presented as Attachment B, background information is presented as Attachment C, field methods, sampling procedures and purge data sheets are presented as Attachment D. Laboratory analytical reports are presented as Attachment E and Boring Logs are presented as Attachment F. Additional supporting documentation is presented within Tables 1 through 4 and Figures 1 through 3.

Site Description

The site is located in a mixed commercial and residential area of San Leandro, California. The site parcel is approximately 5.05 acres and is improved with a multi-tenant strip mall and separate restaurant building. The dry cleaning unit is located within the strip mall and is associated with 13778 Doolittle Drive. The site lies at an elevation of approximately 15 feet above sea level and is relatively flat. The property is bounded by Doolittle Drive to the west, Fairway Drive to the north, Catalina Drive to the east and a commercial property to the south. A Site Vicinity Map is included in Figure 1.

Field Investigation

Utility Survey. Prior to conducting any subsurface investigations, and as requested by the ACHSA, an underground utility survey of the property was conducted on 10/13/15. The results of the survey identified several traces of a sewer line directly below the Four Seasons Cleaners tenant space and also in the vicinity immediately surrounding the unit. Traces of the sewer line are shown on Figure 3. All other utilities within the tenant space appear to be overhead.

Installation of 5.0 foot Soil-Gas Sampling Points. On 10/13/15, WTI advanced two, three-inch diameter borings (SG-1A and SG-2A) using hand equipment to a total of 5.5 feet bgs and completed each boring as permanent soil-gas monitoring wells. The locations of the sampling points are shown on Figure 3. Encountered subsurface soils were logged using the United Soil Classification System (USCS). Each sample point was constructed by placing ¼-inch diameter Teflon® tubing attached to a polyethylene vapor implant to 5.0 ft bgs. A sand pack of #2/12 sand was then installed adjacent to the soil-gas implant within the borings from 4.5 to 5.5 feet bgs. Next, approximately 12-inches of dry granular bentonite was placed above the sand pack, followed by neat cement to the ground surface. The seal was designed to minimize ambient air from the atmosphere from intruding into the area of the polyethylene probe. Well grouting procedures were witnessed by a representative of the Alameda County Public Works Agency (ACPWA). Copies of the well installation permits are presented in Attachment B, detailed description of the field methods is provided in Attachment D and specific well construction details are also depicted on the boring logs (Attachment F).

Installation of Subslab Soil-Gas Sampling Points. On 10/13/15, WTI also installed four, subslab sampling points (VP-1 through VP-4) within the interior of the dry cleaner. Each of the sampling points consisted of a Vapor Pin™ sub-slab sampling point. A Vapor Pin™ is a patented reusable soil gas sampling device designed specifically for sub-slab sampling investigations. Each Vapor Pin™ was installed following the standard operating procedures presented in Appendix D.

Collection of Soil and Grab Groundwater Samples. In addition to installing the above described soil gas sampling points, the Workplan also called for installing two deeper (10 foot) soil gas sampling points within the dry cleaner. However, during the advancement of these borings groundwater was first encountered between 8.5 and 9.0 feet bgs. As such, WTI collected “grab” groundwater samples from each of these borings using clean disposable bailers. Soil samples for laboratory analysis were also collected from each of these borings (and the two shallower soil gas borings) at depths of 2.0, 5.0 and 7.0 feet bgs. Once all soil and grab groundwater samples were collected from the borings, each boring was backfilled from the bottom of the boring to ground surface with neat cement grout, per the requirements outlined in the ACPWA permits (Attachment B). The neat cement grout was composed of a mix consistency of one 94 pound bag of Portland cement to five gallons of water. An inspector from the ACPWA was on-site to witness the grouting process. Each sample was then transported to the analytical laboratory under formal chain of custody procedures and analyzed for VOCs by EPA Test Method 8260b.

Purging and Sampling of Soil Gas Sampling Points. On 10/30/15, each of the two newly installed soil-gas monitoring points (SG-1A and SG-2A) and each of the four subslab sampling points (VP-1 through VP-4) were purged and sampled. Each soil-gas monitoring point was purged and sampled in an Isopropyl Alcohol (IPA) enriched atmosphere within a shroud supplied by WTI. The IPA provided a quantifiable method (inert tracer) to ensure that representative soil gas samples were collected from each monitoring point. The sampling methods were completed in general accordance with the Department of Toxic Substance Control’s (DTSC’s) April, 2012 document *Advisory – Active Soil Gas Investigation*. The soil gas samples were analyzed at a California State-certified laboratory for VOCs (including PCE) by Test Method TO-15. A detailed description of the sampling methods along with copies of the purge data sheets is provided in Attachment D.

Indoor and Ambient Outdoor Air Sampling. Prior to conducting indoor air sampling activities, as requested by the ACPWA, an Indoor Air Building Survey was conducted on 8/24/15. Presampling air sampling instructions for the occupants were also distributed at this time. Copies of the sampling instructions and building survey is provided in Attachment D. On 10/30/15, WTI returned to the site to conduct the indoor air sampling event in conjunction with above described soil gas sampling investigation. The indoor air sampling event was completed in general accordance with the DTSC’s April 2012 *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* and the RWQCB’s October 2014 *Interim Framework for Assessment of Vapor Intrusion at TCE-Contaminated Site in the San Francisco Bay Region*. A total of two indoor air

samples (IND-1 and IND-2) and one exterior “ambient” air sample (OUT-1) was collected. The sample locations are shown on Figure 3. Each sample was collected using an evacuated SUMA® canister (6-L) equipped with an 8-hour flow regulator. Each canister was placed within the breathing zone (approximately 3 to 5 feet above ground surface) and care was taken to deploy the canisters away from the direct influence of any forced air emanating from air conditioners, furnaces, or heaters. The canister vacuum was measured using an integrated vacuum gauge immediately prior to and following the 8-hour sampling period. At the end of the sample period the canister valve was fully closed and the time recorded. Additional data, including: outside and interior temperatures, equipment serial numbers, sampler name, and other comments were also recorded (see Attachment D). The air samples were analyzed at a California State-certified laboratory for VOCs (including PCE) by Test Method TO-15.

Analytical Results

Analytical Results – Soil. In total, ten soil samples from borings SG-1A through SG-2B, were collected and submitted for laboratory analysis. A summary of the soil analytical results is presented with historical data in Table 3 and the complete laboratory data sheets are presented in Appendix E. A brief summary of the analytical data is presented as follows:

- **PCE** was detected in each of the ten samples submitted for analysis at concentrations ranging from 0.16 mg/Kg (SG-2Bd8.5) to 160 mg/Kg (SG-1Bd2.0);
- **TCE** was detected in each of the ten samples submitted for analysis at concentrations ranging from 0.014 mg/Kg (SG-2Bd5.0) to 1.2 mg/Kg (SG-1Bd2.0);
- **cis-1,2DCE** was detected in nine of the ten samples submitted for analysis at concentrations ranging from 0.0021 mg/Kg (SG-2Ad2.0) to 0.15 mg/Kg (SG-1Bd7.0);
- **Vinyl chloride** was not detected above laboratory detection limits in any of the ten samples submitted for analysis;
- No other constituents of concern were detected at concentrations exceeding laboratory detection limits.

Analytical Results – Groundwater. In total, two grab groundwater samples were collected from open borings SG-1B and SG-2B, and were submitted for laboratory analysis. A summary of the groundwater analytical results is presented with historical data in Table 4 and the complete laboratory data sheets are presented in Appendix E. A brief summary of the analytical data is presented as follows:

- **PCE** was detected in each of the samples submitted for analysis at concentrations of 2,200 µg/L and 1,500 µg/L in SG-1B and SG-2B, respectively;
- **TCE** was detected in each of the samples submitted for analysis at concentrations of 130 µg/L and 480 µg/L in SG-1B and SG-2B, respectively;
- **cis-1,2DCE** was detected in each of the samples submitted for analysis at concentrations of 88 µg/L and 280 µg/L in SG-1B and SG-2B, respectively;
- **trans-1,2DCE** was detected in each of the samples submitted for analysis at concentrations of 4.3 µg/L and 22 µg/L in SG-1B and SG-2B, respectively;
- **Vinyl chloride** was detected in one of the samples submitted for analysis at a concentration of 0.43 µg/L in sample SG-2B; and
- No other constituents of concern were detected at concentrations exceeding laboratory detection limits.

Analytical Results – Soil Gas. In total, six soil gas samples (including four subslab vapor pin samples) were collected and submitted for laboratory analysis. A summary of the soil gas analytical results is presented with

historical data in Table 1 and the complete laboratory data sheets are presented in Appendix E. A brief summary of the analytical data is presented as follows:

- **PCE** was detected in each of the six samples submitted for analysis at concentrations ranging from 160,000 $\mu\text{g}/\text{m}^3$ (VP-4) to 20,000,000 $\mu\text{g}/\text{m}^3$ (SG-1A);
- **TCE** was detected in each of the six samples submitted for analysis at concentrations ranging from 5,400 $\mu\text{g}/\text{m}^3$ (VP-3) to 810,000 $\mu\text{g}/\text{m}^3$ (SG-1A);
- **cis-1,2DCE** was detected in five of the six samples submitted for analysis at concentrations ranging from 200 $\mu\text{g}/\text{m}^3$ (VP-4) to 170,000 $\mu\text{g}/\text{m}^3$ (SG-1A);
- **Vinyl chloride** was not detected above laboratory detection limits in any of the samples submitted for analysis;
- **Benzene** was detected in one of the six samples submitted for analysis at a concentration of 590 $\mu\text{g}/\text{m}^3$ in SG-1A;
- **Toluene** was detected in one of the six samples submitted for analysis at a concentration of 1,800 $\mu\text{g}/\text{m}^3$ in SG-1A;
- **IPA** was detected in three of the six samples submitted for analysis at concentrations ranging from 3,900 $\mu\text{g}/\text{m}^3$ (SG-1A) to 370,000 $\mu\text{g}/\text{m}^3$ (VP-2);
- No other constituents of concern were detected at concentrations exceeding laboratory detection limits.

Analytical Results – Indoor & Ambient Air. In total, two indoor and one ambient (outdoor) air samples were collected and submitted for laboratory analysis. A summary of the analytical results is presented in Table 2 and the complete laboratory data sheets are presented in Appendix E. A brief summary of the analytical data is presented as follows:

- **PCE** was detected in each of the three samples submitted for analysis at concentrations ranging from 220 $\mu\text{g}/\text{m}^3$ (IND-1) to 18,000 $\mu\text{g}/\text{m}^3$ (IND-2);
- **TCE** was detected in two of the samples submitted for analysis at concentrations of 32 $\mu\text{g}/\text{m}^3$ (OUT-1) and 240 $\mu\text{g}/\text{m}^3$ (IND-2);
- **cis-1,2DCE** was detected in one of the samples (IND-2) at a concentration of 49 $\mu\text{g}/\text{m}^3$;
- **Vinyl chloride** was not detected above laboratory detection limits in any of the samples submitted for analysis;
- **Benzene** was detected in one of the six samples submitted for analysis at a concentration of 590 $\mu\text{g}/\text{m}^3$ in SG-1A;
- **Toluene** was detected in one of the six samples submitted for analysis at a concentration of 1,800 $\mu\text{g}/\text{m}^3$ in SG-1A;
- No other constituents of concern were detected at concentrations exceeding laboratory detection limits.

Discussion of Analytical Results

Based upon the analytical results, significant soil gas and indoor air contamination of HVOCS (including PCE, TCE, and cis-1,2DCE) exists within Four Seasons Cleaners. The highest detected concentrations of COCs (up to 2,000,000 000 $\mu\text{g}/\text{m}^3$ of PCE) were found in the samples collected from sample points SG-1A and VP-1. Both of these samples are located directly adjacent to the sewer line which leads away from the floor drain located within the boiler room of the dry cleaner tenant space (Figure 3). It appears likely that the floor drain is the point source of this detected contamination. Elevated concentrations of HVOCS were also noted in soil (up to 65 mg/Kg of PCE in SG-1A at 2.0 ft bgs) and grab groundwater samples (up to 2,200 $\mu\text{g}/\text{L}$ of PCE in SG-1B) collected from sample points within this area. This further supports the likely hood of the floor drain being the point source.

These sample results are consistent with historical sample results collected as part of a Phase II ESA at the subject site in 2014.

Cancer Risk Evaluation

Based upon the above results, a distinct potential cancer risk associated with indoor air exposure based upon the current concentrations of PCE in soil gas, exists at the site. To determine the potential cancer risk, WTI completed a vapor risk assessment model using software developed by the San Diego County Department of Environmental Health (SDCDEH). WTI used the most recent PCE soil gas analytical data collected from the six soil gas points sampled during this investigation to determine the resulting cancer risk. A Hazard Index value was also calculated using the SDCDEH software. The input data and results of the SDCDEH model for soil gas samples are presented in Attachment G and summarized in the following table.

Sample ID	Sample Date	Depth (ft bgs)	Sample Matrix	PCE ($\mu\text{g}/\text{m}^3$)	Hazard Index	Cancer Risk
SG-1A	10/30/15	5.0	Soil Gas	20,000,000	8.61E+00	6.46E-04
SG-2A	10/30/15	5.0	Soil Gas	1,300,000	5.60E-01	4.20E-05
VP-1	10/30/15	subslab	Soil Gas	2,900,000	9.49E+00	7.12E-04
VP-2	10/30/15	subslab	Soil Gas	180,000	5.89E-01	4.42E-05
VP-3	10/30/15	subslab	Soil Gas	470,000	1.54E+00	1.15E-04
VP-4	10/30/15	subslab	Soil Gas	160,000	5.24E-01	3.93E-05

Notes:

Sub-slab = 0.8 ft = 0.2 m, NA = not analyzed

Based on the results of the SDCDEH model for the PCE soil gas concentrations, and associated matrix depths summarized in the above table, the resulting Cancer Risk values for each soil gas sample ranged from 4.42E-05 (VP-2) to 7.12E-04 (VP-1) and the resulting Hazard Index ranged from 0.524 (VP-4) to 9.49 (VP-1). The DTSC has outlined response actions for risk management decisions based on Cancer Risk and Hazard Index values in their October 2011 document *Final-Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor*. A copy of this document can be found at the following link:

https://dtsc.ca.gov/AssessingRisk/upload/Final_VIG_Oct_2011.pdf

As described in the example contingency plan (page 36 of the above referenced document), the DTSC recommends that whenever the Cancer Risk is greater than 1.0E-04, as exists at the subject site, a response action in the form of vapor intrusion mitigation and/or source remediation is necessary.

Conclusions

The purpose of this investigation was to 1.) confirm and further define the extent of soil gas contamination previously identified at the site; and 2.) evaluate the potential cancer risk associated with indoor air exposure based upon the current concentrations of HVOCS, particularly PCE, in soil gas. Based upon the results of the investigation, and a review of historical data, WTI makes the following conclusions:

- Significant HVOCS contamination in soil, groundwater, and especially soil gas and indoor air exists at the subject site.
- The source of subsurface contamination appears to be a floor drain (and possibly associated sewer lines) located within the boiler room of the dry cleaner unit.

- The extent of soil gas contamination appears to be undefined and may extend into neighboring commercial units adjoining the dry cleaner facility.
- Based upon cancer risk modeling of current PCE soil gas concentrations, the potential human health Cancer Risk is greater than 1E-04 and the Hazard Index is greater than 1.0. The DTSC recommends that when the Cancer Risk is greater than 1.0E-04, as exists at the subject site, a response action in the form of vapor intrusion mitigation and/or source remediation is necessary.

Recommendations

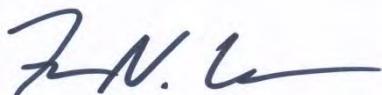

Based on the data collected during this investigation, review of historical information, and the above conclusions, WTI makes the following recommendations:

- Per the conditions outlined in the Public Fact Sheet documents prepared and distributed by WTI prior to this investigation, all potential stake holders in the site (including the site tenant and neighboring businesses) should be notified of the findings of this investigation. Of particular importance is the notification to tenants of the elevated concentrations of HVOCs found in soil gas and indoor air at the subject site.
- A work plan to evaluate soil gas and indoor air conditions in neighboring units, immediately adjoining Four Seasons Cleaners, should be developed and implemented as soon as possible. The work plan should also address remedial options for indoor air and soil gas within Four Seasons Cleaners.

Certification

To the best of our knowledge, all statements made in this Report are true and correct. This Report is based on data provided by the client and others, site conditions observed, samples collected and analytical data. No warranty whatsoever is made that this report addresses all contamination found on the site. If you have any questions or comments, please contact WellTest at (408) 287-2175. A copy of the client-authorization transmittal letter is provided in Attachment H.

Respectfully submitted,

Forrest N. Cook
California Professional Geologist #8201 (exp 9/16)

Limitations

WELLTEST is a California-licensed Class C specialty contractor (C-57 #843074). Proposed contracting work to be performed by WELLTEST exceeding \$500 in labor and materials as outlined in this work plan, will be limited to the following specialty and limited-specialty contracting services consistent with the scope of our license to contract:

- Well drilling services (C-57 contracting services)

Contractor services documented in this report were performed by WELLTEST in accordance with the methods and generally accepted standards provided by CSLB-licensed specialty contractors performing similar work in Northern California during the time this project was completed.

Geologic services (scientific aspects of subsurface data collection, interpretation, and reporting) documented in this report were performed by WELLTEST in accordance with the methods and generally accepted standards provided by licensed Geologists performing similar work in Northern California during the time the project was completed.

This report is intended only for the use of WELLTEST's client and those listed in the distribution section of the report. WELLTEST does not accept liability for unauthorized reliance or use by any other third party. WELLTEST makes no expressed or implied warranty in regards to the contents of this report.

This report is the property of WELLTEST. Copyright © 2016 WellTest, Inc. All rights reserved.

Subject: Request for Public Notification Documents; Site Cleanup Program Case No. RO0003155
and Geotracker Global ID T10000006425, Four Seasons Cleaners, 13778 Doolittle Drive,
San Leandro, CA 94577

Dear Ms. D'Hondt:

Alameda County Environmental Health (ACEH) staff has reviewed the case file including the *Soil and Water Investigation Report and Vapor Assessment Work Plan*, dated March 6, 2015. The report was prepared and submitted by Well Test, Inc (WTI). Thank you for submitting the report. The report documented the installation of eight direct push soil bores (DP-1 to DP-8) that were installed to initiate delineation of the downgradient extent of soil and groundwater contamination associated with the release of chlorinated or halogenated volatile organic compounds (HVOCs) at the referenced site. Concentrations up to 12,000 micrograms per liter ($\mu\text{g/l}$) tetrachloroethene (PCE), 2,100 $\mu\text{g/l}$ trichloroethene (TCE), 610 $\mu\text{g/l}$ cis-1,2-dichloroethene (cis-1,2-DCE), and 11 $\mu\text{g/l}$ trans-1,2-Dichloroethene (trans-1,2-DCE) were detected downgradient of the dry cleaner. These concentrations exceed the Commercial Environmental Screening Levels (ESLs) promulgated by the San Francisco Bay Regional Water Quality Control Board (RWQCB) issued in conjunction with the *User's Guide: Derivation and Application of Environmental Screening Levels*, as revised in December 2013. The respective ESLs are 5.0 $\mu\text{g/l}$ for PCE, 5.0 $\mu\text{g/l}$ for TCE, 6.0 $\mu\text{g/l}$ cis-1,2-DCE, and 10.0 $\mu\text{g/l}$ trans-1,2-DCE.

The requested work plan proposed the installation of two soil vapor well locations with nested soil vapor wells constructed at the depths of 4 and 8 feet below grade surface (bgs), four sub-slab vapor pin locations (two proximal to the proposed soil vapor wells), two indoor air sampling locations, and one outdoor ambient air sample.

ACEH is in general concurrence with undertaking the proposed scope of work; however, prior to approving the scope of work, public outreach is necessary in order to communicate activities with potential interested parties in the general vicinity, adjacent commercial suites, and with the occupants of the subject suite. Therefore ACEH requests that you address the following technical comments and send us the documents requested below.

TECHNICAL COMMENTS

1. **Draft Public Fact Sheet Notice** - Based on a review of site data, public participation activities are required at this site. The purpose of public participation is to facilitate communication and coordination with stakeholders potentially affected by, or concerned with, soil and groundwater contamination and potential vapor intrusion risks associated with chlorinated solvents in soil, groundwater, and soil vapor at the site at concentrations that exceed applicable regulatory screening levels used to judge the necessity of conducting corrective actions at the site.

As part of the public participation process, you must notify potentially affected stakeholders who live or own property in the area around the release of the site conditions through a mailing of a fact sheet. Please establish an initial mailing list of property owners and tenants who are located within 350 feet of the suspected release location (sample location S3) at the property. The mailing list should also include other stakeholders who have interest in tenant improvements, have political jurisdiction within

or adjacent to the potential vapor intrusion area, represent community leadership or advocacy, or need to be aware of planned activities.

This will require the generation of two notices, one for offsite property owners and tenants and one for tenants at the commercial mall. Please submit a draft distribution list and draft informational fact sheet about the site and planned investigation and characterization activities (MS Word format) for agency review by the date specified below. Please see the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) Vapor Intrusion Public Participation Advisory (VIPPA), dated March 5, 2012 for examples.

2. **Draft Indoor Air Sampling Fact Sheet** – An additional level of communication must also be provided to all units in which indoor air samples are proposed to be collected at (currently one). The purpose is to inform occupants of the units of the importance of, and what will happen during, the indoor air sampling work that has been proposed. Examples of this type of communication are contained in the DTSC VIPPA document (especially pages 76 to 83). ACEH requests the submittal of a draft Indoor Air Sampling Fact Sheet (MW Word format) intended for indoor air sampling, by the date identified below.
3. **Indoor Air Fact Sheet Distribution** – After ACEH approval of the draft indoor air sampling fact sheet, please ensure that the fact sheet is distributed a minimum of 1 week prior to site interviews and observations. Please also ensure that the occupants of the unit have not used chemicals that contain or could confuse PCE vapor sampling results (for example that contain PCE, TCE, or other potential breakdown products etc.) are not used for a minimum of one week prior to the indoor air sampling effort. Finally, please ensure that the heating, ventilation, and air conditioning (HVAC) systems are not operating during the 24 hour sampling events in each unit (*EPA Region 9 Guidelines and Supplemental Information Needed for Vapor Intrusion Evaluations at the South Bay National Priorities List (NPL) Sites*, December 3, 2013, US EPA).
4. **Work Plan Modifications** – The referenced work plan proposes a series of actions with which ACEH is in general agreement of undertaking; however, ACEH will, upon approval and distribution of the public notification fact sheets, request several modifications to the approach. Please be aware that at this time ACEH has not provided approval to proceed with the scope of work, but is communicating the requested modifications. Please submit a report by the date specified below.
 - a. **Vapor Well Completions** – The referenced work plan proposes to install two dual completion vapor wells to the depths of 4 and 8 feet bgs. ACEH requests the two depths at each well be installed in a nested fashion (completed as separate wells offset by several feet) in order to eliminate data interpretation complications should the wells fail to seal as expected.
 - b. **Ambient Air Vapor Sample Location** – The outdoor ambient air sample location appears to be located in a downwind direction from the release. In order to determine background outdoor air vapor concentrations, please relocate the sample to an upgradient location based on the prevailing wind direction at the site.
 - c. **Utility Survey** – In addition to locating the sanitary sewer lines, please additionally locate and determine the depths of installation of other potential conduits such as underground electrical and storm water utility locations at the site. While the principal concern is the sanitary sewer location, the additional utilities can affect contaminant flow patterns.
 - d. **Previous Configurations of Dry Cleaner Suite** – In order to quickly determine additional potential PCE release locations ACEH requests the identification of previous configurations of the dry cleaning suite, especially during the period of PCE use. This should include the presence of other dry cleaning machines, use areas, including former use areas if known, spent solvent storage areas, solvent filter drain areas, the location of the former solvent delivery area (front or rear), former equipment outlines on the slab floor, the location of concrete patches or trenches, pavement changes, anchor bolts cut off at the concrete surface that indicate former machine locations, sumps, floor drains, and other features that will identify critical areas for investigation. The intent of this request is to quickly help focus future assessment locations and to help minimize expenses. An excellent resource in this effort is

Mr. Ernie Lee
RO0003155
April 16, 2015, Page 3

the document entitled *Conducting Contamination Assessment Work at Drycleaning Sites*, published by the State Coalition for Remediation of Drycleaners, dated October 2010.

- e. **Soil Sample Selection Protocols** – The work plan does not mention the collection of soil samples from the proposed soil vapor wells. ACEH requests the collection and laboratory analysis of a sufficient number of soil samples from each soil bore in order to characterize the lateral and vertical extent of HVOC contamination relative to existing bore locations S1 to S3. ACEH requests the analysis of these soil samples based on indications of contamination such as photoionization detections, odor, discoloration, and significant changes in lithology.
5. **Work Plan Request** – Coincident with the submittal of the requested site report, and utilizing the results of the work, including the location of the sanitary sewer, ACEH additionally requests a work plan to assess the lateral and vertical extent of soil and groundwater contamination downgradient of the release. Please submit a work plan by the date identified below.

TECHNICAL REPORT REQUEST

Please upload technical reports to the ACEH ftp site (Attention: Mark Detterman), and to the State Water Resources Control Board's Geotracker website, in accordance with the specified file naming convention below, according to the following schedule:

- **May 15, 2015** – Draft Public Fact Sheets (in MS Word format) with List of Fact Sheet Recipients (Please initially email to ACEH case worker only); file to be named: RO3155_PP_yyyy-mm-dd
- **15 Days After Fact Sheet Approval** – Certification of Fact Sheet Distribution File to be named: RO3155_CORRES_L_yyyy-mm-dd
- **60 Days After Fact Sheet Approvals** – Site Investigation File to be named: RO3155_SWI_R_yyyy-mm-dd
- **60 Days After Fact Sheet Approvals** – Vapor Assessment Work Plan (Combined with above report) File to be named: RO3155_WP_R_yyyy-mm-dd

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

Online case files are available for review at the following website: <http://www.acgov.org/aceh/index.htm>.

If you have any questions, please do not hesitate to call me at (510) 567-6876 or send me an electronic mail message at mark.detterman@acgov.org.

Sincerely,

Specific Work Permit Conditions

1. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
2. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled,

Alameda County Public Works Agency - Water Resources Well Permit

properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.

3. Compliance with the well-sealing specifications shall not exempt the well-sealing contractor from complying with appropriate State reporting-requirements related to well construction or destruction (Sections 13750 through 13755 (Division 7, Chapter 10, Article 3) of the California Water Code). Contractor must complete State DWR Form 188 and mail original to the Alameda County Public Works Agency, Water Resources Section, within 60 days. Include permit number and site map.
 4. Applicant shall submit the copies of the approved encroachment permit to this office within 10 days.
 5. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
 6. Minimum seal depth (Neat Cement Seal) is 2 feet below ground surface (BGS).
 7. Minimum surface seal thickness is two inches of cement grout placed by tremie.
 8. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
 9. Electronic Reporting Regulations (Chapter 30, Division 3 of Title 23 & Division 3 of Title 27, CCR) require electronic submission of any report or data required by a regulatory agency from a cleanup site. Submission dates are set by a Regional Water Board or by a regulatory agency. Once a report/data is successfully uploaded, as required, you have met the reporting requirement (i.e. the compliance measure for electronic submittals is the actual upload itself). The upload date should be on or prior to the regulatory due date.
 10. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

13778 Doolittle Drive, San Leandro, CA
Case # RO0003155

A description of the site, the history of the site and project, and the hydrogeologic characteristics of the site are summarized in the following subsections.

Site Description: The site is located in a mixed commercial and residential area of San Leandro, California. The site parcel is approximately 5.05 acres and is improved with a multi-tenant strip mall and separate restaurant building. The dry cleaning unit is located within the strip mall and is associated with 13778 Doolittle Drive. The site lies at an elevation of approximately 15 feet above sea level and is relatively flat. The property is bounded by Doolittle Drive to the west, Fairway Drive to the north, Catalina Drive to the east and a commercial property to the south..

Previous Site Investigations: A *Limited Phase II Soil, Water, and Soil Vapor Investigation* prepared by PIERS Environmental Services, Inc. (PIERS) for the subject site in August 2014. The results of the PIERS report indicated that the subsurface at the subject site has been significantly impacted by the common dry cleaning solvent tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2DCE). The likely source of the identified impacts is the on-site dry cleaner which, reportedly, historically used and stored these solvents. Based upon the results of the PIERS investigation, WTI prepared a *Soil and Water Investigation Work Plan* for the subject site, which outlined a specific set of tasks to further define the scope and extent of subsurface soil and water contamination. The Work Plan was submitted to the Alameda County Health Care Services Agency (ACHCSA), the local oversight program, and was approved (with comments) in their January 15, 2015 Directive Letter. WTI implemented the scope of the Work Plan in February 2015, which included the collection of soil and grab groundwater samples from eight temporary borings. The results of the investigation are presented in WTI's *Soil and Water Investigation Report and Vapor Assessment Work Plan*, dated March 6, 2015.

13778 Doolittle Drive, San Leandro, California

Soil Gas Sampling Point Installation (Soil Gas Monitoring Wells)

WTI installed an Environmental Service Products polyethylene soil vapor implant near the base of each boring. The polyethylene implants are a one-piece molded assembly made of high-density porous polyethylene. The filtration rating is 40-60 microns with a maximum temperature of 150 degrees Fahrenheit. Each implant was fitted with a "Speedfit" push-in brass fitting with a nickel-plated finish that accommodates 1/4" OD tubing. The size of each polyethylene implant was 1/2" OD x 1-7/8" in length. Teflon tubing (0.17" ID x 1/4" OD) was attached to each implant and extended to the ground surface. A one-foot layer of #2/12 or #2/16 filter sand was placed at the base of each boring. A six-inch layer of dry granular 8-mesh bentonite was placed on top of the sand filter pack. Portland neat cement was poured on top of the bentonite seal to just below the ground surface. The Teflon tube was capped and placed within a locking wellhead completion (2-inch diameter casing with a locking cap).

Soil Gas Point Sampling Procedures

Soil gas samples were not collected sooner than 72-hours to allow for representative soil gas to accumulate from the formation into the completed well. Samples were collected using a SUMA® canister supplied by the contracted laboratory. Prior to the collection of a sample, the soil gas monitoring well had at least 3 purge volumes of air (soil gas) removed from the probe and tubing associated with the well, as well as the soil gas from the voids within sand pack at the base of the well and within the dry granular 8-mesh bentonite above the sand pack interval. The well was purged using a SUMA® canister (purge canister) attached to a flow meter which, in turn is attached to the Teflon tubing of the soil gas well. The well was purged at a rate between 100 to 200 ml/minute. Once the well was purged, a sample collection SUMA® canister was attached to the Teflon tubing of the well, the initial negative pressure of the canister was measured (and recorded), and soil gas was delivered to the canister from the well until a negative pressure of about five-inches of Hg is noted on the vacuum gauge on the sample collection SUMA® canister. All vacuum readings were documented on the chain of custody record. Soil gas samples were kept at ambient temperatures, and were transported to the laboratory under chain of custody record.

Data Quality Assurance – IPA Shroud Leak Test Procedure

Soil Gas sampling was conducted using a isopropyl alcohol (IPA) shroud technique described in Appendix C of the CA DTSC Soil Gas Advisory Document (July 2015) to ensure representative soil gas samples were collected. A IPA tracer shroud was used to perform a quantitative leak test while sampling the two soil gas wells. A sealed chamber was placed over the wellhead of the soil gas wells. A 20% IPA in air atmosphere was maintained around the sample train and above the well annulus.

Building Address: 13778 Dardelle Dr., San Leandro, CA

Property Contact: Emily Chicas Owner / Renter / other: (510) 483-3643

Contact's Phone: home () — work (510) 483-3643 cell (510) 717-3929

of Building occupants: Children under age 13 0 Children age 13-18 0 Adults 1-6

Part II – Building Characteristics

Building type: residential / multi-family residential / office strip mall commercial industrial

Describe building: Multi-tenant commercial strip mall Year constructed: unknown

Sensitive population: day care / nursing home / hospital / school / other (specify): NA

Number of floors below grade: 0 (full basement / crawl space / slab on grade)

Number of floors at or above grade: 1

Depth of basement below grade surface: NA ft. Basement size: NA ft²

Basement floor construction: concrete / dirt / floating / stone / other (specify): NA

Foundation walls: poured concrete / cinder blocks / stone / other (specify) _____

Basement sump present? Yes / No Sump pump? Yes / No Water in sump? Yes / No *No basement sump, but sump is present on within slab on grade floor*

Type of heating system (circle all that apply):

hot air circulation	hot air radiation	wood	steam radiation
heat pump	hot water radiation	kerosene heater	electric baseboard
other (specify): <u>Boiler</u>			

Type of ventilation system (circle all that apply):

central air conditioning <u>NO</u>	mechanical fans <u>NO</u>	bathroom ventilation fans individual air
conditioning units <u>NO</u>	kitchen range hood fan	<u>outside air intake</u>
other (specify): <u>Ceiling & Event fans</u>		<u>ceiling vents</u>

Type of fuel utilized (circle all that apply):

Natural gas <u>NO</u>	electric / fuel oil / wood / coal / solar / kerosene
-----------------------	--

Are the basement walls or floor sealed with waterproof paint or epoxy coatings?

Yes / No NA,
No Basement

Is there a whole house fan? Yes / No
 Septic system? Yes / Yes (but not used) No
 Irrigation/private well? Yes / Yes (but not used) No
 Type of ground cover outside of building: grass concrete asphalt other (specify) _____
 Existing subsurface depressurization (radon) system in place? Yes / No active / passive
 Sub-slab vapor/moisture barrier in place? Yes / No
 Type of barrier: unknown

Part III - Outside Contaminant Sources

Vicinity contaminated site (1000-ft. radius): No other open cases with 1,000'
 Other stationary sources nearby (gas stations, emission stacks, etc.): "Crazy Charlies" Gas and propane
 13700 Estacine St.
 Heavy vehicular traffic nearby (or other mobile sources): Heavy Traffic on Fairley Dr. & Doolittle Dr.

Part IV – Indoor Contaminant Sources

Identify all potential indoor sources found in the building (including attached garages), the location of the source (floor and room), and whether the item was removed from the building 48 hours prior to indoor air sampling event. Any ventilation implemented after removal of the items should be completed at least 24 hours prior to the commencement of the indoor air sampling event.

Potential Sources	Location(s)	Removed (Yes / No / NA)
Gasoline storage cans		
Gas-powered equipment		
Kerosene storage cans		
Paints / thinners / strippers	SEE ATTACHED LIST	
Cleaning solvents	OF POTENTIAL SOURCES	
Oven cleaners	TO BE REMOVED.	
Carpet / upholstery cleaners		
Other house cleaning products		
Moth balls		
Polishes / waxes		
Insecticides		
Furniture / floor polish		
Nail polish / polish remover		
Hairspray		
Cologne / perfume		
Air fresheners		
Fuel tank (inside building)		NA
Wood stove or fireplace		NA
New furniture / upholstery		
New carpeting / flooring		NA
Hobbies - glues, paints, etc.		

Part V – Miscellaneous Items

Do any occupants of the building smoke? Yes No How often? _____

Last time someone smoked in the building? _____ hours / days ago

Does the building have an attached garage directly connected to living space? Yes No

If so, is a car usually parked in the garage? Yes

Are gas-powered equipment or cans of gasoline/fuels stored in the garage? Yes / No NA

Do the occupants of the building have their clothes dry cleaned? Yes / No NA - site is a drycleaner

If yes, how often? weekly / monthly / 3-4 times a year

Do any of the occupants use solvents in work? Yes

If yes, what types of solvents are used? NA

If yes, are their clothes washed at work? Yes / No

Have any pesticides/herbicides been applied around the building or in the yard? Yes / No NA - no yard

If so, when and which chemicals? _____

Has there ever been a fire in the building? Yes / No unknown If yes, when? _____

Has painting or staining been done in the building in the last 6 months? Yes

If yes, when _____ and where? _____

Part VI – Sampling Information To be completed upon Sampling

Sample Technician: Forrest Cook Phone number: (851) 420 - 7923

Sample Source: Indoor Air / Sub-Slab / Near Slab Soil Gas / Exterior Soil Gas

Sampler Type: Tedlar bag / Sorbent Stainless Steel Canister / Other (specify): _____

Analytical Method: TO-15 TO-17 / other: _____ Cert. Laboratory: BC Labs

Sample locations (floor, room):

Field ID # IND-1 Main Room - middle Field ID # OUT-1 In front of Entrance

Field ID # IND-2- B side Room Field ID # _____

Were "Instructions for Occupants" followed? Yes No

If not, describe modifications: _____

Provide Drawing of Sample Location(s) in Building

See attached list

Part VII - Meteorological Conditions

Was there significant precipitation within 12 hours prior to (or during) the sampling event?

Yes No

Describe the general weather conditions: Overcast

Part VIII – General Observations

Provide any information that may be pertinent to the sampling event and may assist in the data interpretation process.

(NJDEP 1997; NHDES 1998; VDOH 1993; MassDEP 2002; NYSDOH 2005; CalEPA 2005)

Potential VOC Sources

<u>Location</u>	<u>Item</u>
Front Counter -	WD 40 + Windex
Front Sewing Machine -	Broke Briske Cleaner
Middle of Unit -	Spot Cleaners
Under Clock -	Ammonia + "Street ton"
Middle of Unit	Blue 55-Gal. Drum of "Hydrocarbon Dry Cleaning Fluid"
"	"Forge 22 Grs Canister"
Under Sink	General Soaps
Back Wall	Insecticide: "Bug Stop"
Back Room	Black 1/2 drum of used solvent waste
"	Butane Fuel + other generic cleaning supplies
"	Generic Lubricant
"	Gresse + Paint Cans - 1 gal x 6

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A01	Detection and quantitation limits are raised due to sample dilution.
Q02	Matrix spike precision is not within the control limits.
S09	The surrogate recovery on the sample for this compound was not within the control limits.

-----------------------	-------

CALCULATION OF SOIL GAS CONCENTRATION

A. SOURCE - Free Product/Soil>100mg/kg.

Mole fraction	MF	=	0.00E+00	dimensionless
Molecular weight	MW	=	1.66E+05	mg/mole
Vapor pressure	VP	=	1.90E-02	atm
Universal gas constant	R	=	8.20E-05	atm-m3/mole-K
Temperature	T	=	2.93E+02	K
Calculated soil gas concentration	C_{sg}(fp)	=	0.00E+00	mg/m3

B. SOURCE - Groundwater

Water contamination level	C _w	=	0.00E+00	ug/l
Henry's Law Constant	H	=	7.50E-01	dimensionless
Calculated soil gas concentration	C_{sg}(gw)	=	0.00E+00	mg/m3

C. SOURCE - Soil < 100 mg/kg

Soil contamination level	C _t	=	0.00E+00	mg/kg
Henry's Law Constant	H	=	7.50E-01	dimensionless
Bulk density (dry)	ρ _b	=	1.80E+00	gm/cc
Air-filled porosity	θ _a	=	2.00E-01	dimensionless
Water-filled porosity	θ _w	=	1.00E-01	dimensionless
Soil/water distribution coef.	K _d	=	2.70E+00	cm ³ /gm
Calculated soil gas concentration	C_{sg}(s)	=	0.00E+00	mg/m3

D. SOURCE - Measured Soil Gas

Measured soil gas concentration	C _{sg} (m)	=	4.70E+02	mg/m3 (ug/l)
---------------------------------	---------------------	---	----------	--------------

E. SOIL GAS CONCENTRATION USED IN RISK CALCULATIONS >>> 4.70E+02 mg/m3

Input Data

Version: November 1999

Revised 07/29/2010

Case Name:

Four Seasons: VP-4 (10.30.15)

CHEMICAL OF CONCERN:**Enter Chemical Name =**

tetrachloroethene (PCE)

- C11** benzene
- C12** benzo(a)pyrene
- C13** carbon tetrachloride
- C14** chlorobenzene
- C15** chloroethane (ethyl chloride)
- C16** chloromethane (methyl chloride)
- C17** 1,2-dichlorobenzene
- C18** 1,3-dichlorobenzene
- C19** 1,4-dichlorobenzene
- C20** 1,1-dichloroethene (1,1-DCE)
- C21** trans-1,2-dichloroethene
- C22** 1,1-dichloroethane (1,1-DCA)
- C23** 1,2-dichloroethane (1,2-DCA)

- E11** dichloromethane (methylene chloride)
- E12** ethylbenzene
- E13** naphthalene
- E14** methyl tertiary butyl ether (MTBE)
- E15** tetrachloroethene (PCE)
- E16** toluene
- E17** 1,1,1-trichloroethane
- E18** 1,1,2-trichloroethane
- E19** trichloroethene (TCE)
- E20** trichloromethane (chloroform)
- E21** vinyl chloride
- E22** xylene

Chemical Mixture (if app.) =

- C27** Gasoline
- C28** Kerosene
- C29** Diesel
- E27** Fuel Oil
- E28** Waste Oil

If compound is not listed then data must be entered into the site-specific field.

SITE SPECIFIC INFORMATION		Site-Specific	Value Used
Mole fraction	dimensionless	MF	0.0000
Temperature	K	T	293
Water concentration (chemical)	ug/l	C _w	0
Soil concentration (chemical)	mg/kg	C _t	0
Soil concentration (TPH/TRPH)	mg/kg	C _t	0
Soil gas concentration (measured)	mg/m ³ (ug/l)	C _{sg(m)}	160
Depth of contamination or Soil Gas	m	X	0.2

Case Name: Four Seasons: VP-4 (10.30.15)

Chemical: tetrachloroethene (PCE)

Variable Descriptions	Units
-----------------------	-------

CALCULATION OF SOIL GAS CONCENTRATION

A. SOURCE - Free Product/Soil>100mg/kg.

Mole fraction	MF	=	0.00E+00	dimensionless
Molecular weight	MW	=	1.66E+05	mg/mole
Vapor pressure	VP	=	1.90E-02	atm
Universal gas constant	R	=	8.20E-05	atm-m3/mole-K
Temperature	T	=	2.93E+02	K
Calculated soil gas concentration	C_{sg}(fp)	=	0.00E+00	mg/m3

B. SOURCE - Groundwater

Water contamination level	C _w	=	0.00E+00	ug/l
Henry's Law Constant	H	=	7.50E-01	dimensionless
Calculated soil gas concentration	C_{sg}(gw)	=	0.00E+00	mg/m3

C. SOURCE - Soil < 100 mg/kg

Soil contamination level	C _t	=	0.00E+00	mg/kg
Henry's Law Constant	H	=	7.50E-01	dimensionless
Bulk density (dry)	ρ _b	=	1.80E+00	gm/cc
Air-filled porosity	θ _a	=	2.00E-01	dimensionless
Water-filled porosity	θ _w	=	1.00E-01	dimensionless
Soil/water distribution coef.	K _d	=	2.70E+00	cm ³ /gm
Calculated soil gas concentration	C_{sg}(s)	=	0.00E+00	mg/m3

D. SOURCE - Measured Soil Gas

Measured soil gas concentration	C _{sg} (m)	=	1.60E+02	mg/m3 (ug/l)
---------------------------------	---------------------	---	----------	--------------

E. SOIL GAS CONCENTRATION USED IN RISK CALCULATIONS >>> 1.60E+02 mg/m3

DIFFUSIVE TRANSPORT UPWARD IN UNSATURATED ZONE

Total porosity	θ	=	3.00E-01	dimensionless
Air-filled porosity	θ _a	=	2.00E-01	dimensionless
Diffusion coefficient in air	D _a	=	7.20E-02	cm ² /sec
Effective diffusion coefficient	D_e	=	3.76E-03	cm²/sec
Depth of contamination or C _{sg}	X	=	2.00E-01	m
Calculated Flux	F_x	=	1.08E+00	mg/m²-hour

Case Name: Four Seasons: VP-4 (10.30.15)**CALCULATING VAPOR CONCENTRATION IN BUILDING****A. INDOOR AIR COMPONENT**

Floor area of building	A	=	1.00E+00	m ²
% of floor area that flux occurs		=	1.00E+00	dimensionless
Slab Attenuation factor	S _b	=	1.00E-01	dimensionless
Flux area within building	A _f	=	1.00E-01	m ²
Interior Height of building	R _h	=	2.44E+00	m
Volume of building	V	=	2.44E+00	m ³
Exchange rate of air	E	=	8.30E-01	exchanges/hr
Ventilation rate	Q	=	2.03E+00	m ³ /hr
Indoor air component	C_i	=	5.35E-02	mg/m ³

B. OUTDOOR AIR COMPONENT

Downwind contamination length	L	=	0.00E+00	m
Wind speed	u	=	1.60E+04	m/hr
Height of building openings (or height of breathing zone)	h	=	2.00E+00	m
Outdoor air component	C_o	=	0.00E+00	mg/m ³
C. TOTAL INDOOR AIR CONCENTRATION	C_t	=	5.35E-02	mg/m ³

EXPOSURE SCENARIO

Body weight	BW	=	7.00E+01	kg
Inhalation rate	IR	=	2.00E+01	m ³ /day
Exposure duration	ED	=	2.50E+01	yrs
Hours per day	conversion		1.20E+01	hr/day
Exposure time	ET	=	5.00E-01	hr/24 hours
Days per week	conversion		5.00E+00	days/week
Weeks per year	conversion		5.00E+01	weeks/yr
Exposure frequency	EF	=	2.50E+02	days/yr
Averaging Time (carc. risk)	AT	=	2.56E+04	days
Averaging Time (non-carc. risk)	AT	=	9.13E+03	days
Chemical Intake (carc. risk)	IT_c	=	1.87E-03	mg/kg-day
Chemical Intake (non-carc. risk)	IT_{nc}	=	5.24E-03	mg/kg-day

NON-CARCINOGENIC RISK (Chronic Risk)

Chemical Intake (non-carc. risk)	IT _{nc}	=	5.24E-03	mg/kg-day
Reference dose	RfD	=	1.00E-02	mg/kg-day
Hazard Index	HI	=	5.24E-01	

CARCINOGENIC RISK

Chemical Intake (carc. risk)	IT _c	=	1.87E-03	mg/kg-day
Slope factor (potency)	SF	=	2.10E-02	1/(mg/kg-day)
Cancer Risk	Risk	=	3.93E-05

Re: Soil Vapor and Indoor Air Investigation Report (Report #4601)
Four Seasons Cleaners; Cleanup Program # RO0003155
13778 Doolittle Ave., San Leandro, California

Dear Mr. Detterman:

Attached for your review is a technical report (Soil Vapor and Indoor Air Investigation Report) for the above-referenced case. The report was prepared by WellTest, Inc. at my request.

I declare under the penalty of perjury that information and/or recommendations contained in the attached report are true and correct, to the best of my knowledge.

If you should have any questions or comments, please do not hesitate to contact me, or the WellTest project manager, Bill Dugan at (408) 287-2175.

Sincerely,

Mr. Ernest Lee
Marina Faire Shopping Center
3271 S. Highland Dr., Ste. #704
Las Vegas, NV 89109
