ALAMEDA COUNTY HEALTH CARE SERVICES AGENCY

REBECCA GEBHART, Acting Director

ENVIRONMENTAL HEALTH DEPARTMENT ENVIRONMENTAL PROTECTION 1131 Harbor Bay Parkway, Suite 250 Alameda, CA 94502-6577 (510) 567-6700 FAX (510) 337-9335

Late Letter

May 26, 2016

Tudor Hall Apartments, LP 800 Airport Boulevard, #510 Burlingame, CA 94010

Subject: Request for Work Plan; Fuel Leak Case No. RO0003165 and GeoTracker Global ID

T10000007042, Tudor Hall Apartments, 150 17th Street, Oakland, CA 94612

Dear Responsible Party:

A review of the case file for the above-referenced site indicates that your case is currently in not in compliance with Alameda County Environmental Health's (ACEH) letter dated June 22, 2015 which required the submittal of a work plan by August 31, 2015. Approximately nine (9) months have lapsed and the work plan has not been received.

Implementation of site characterization and/or cleanup at this site is crucial to be protective of human health and the environment and to move this case towards closure evaluation. Please note that as the Responsible Party, you are required by California Code of Regulations, Title 23, Division 3, Chapter 16, Article 11, §2720 through §2728 to characterize the site and implement corrective action, if needed.

Also, a review of California State Water Resources Control Board (SWRCB) GeoTracker website indicates that not all submittals have been electronically uploaded rendering the site to non-compliance status. Please note that in addition to GeoTracker, all reports, work plans, correspondences, etc. must be uploaded to ACEH's ftp site (see the enclosed "ACEH Electronic Report Upload (ftp) Instructions.").

In order to regain compliance, please submit the requested work plan, and electronically upload all documents to GeoTracker and ACEH's ftp server by the dates specified below. Failure to submit the work plan by the due date specified below may result in an issuance of a Notice of Violation and possible enforcement action by the District Attorney and/or ineligibility for reimbursement of corrective action costs incurred at the site from the Underground Storage Tank Clean-up Fund.

As your electronic mail address is not listed on the first page of this letter, ACEH is requesting your electronic mail address to help expedite communications. Additionally, ACEH requests that you provide your environmental consultant's contact information to ACEH via electronic mail, Attn. Keith Nowell, so that future ACEH correspondences may include your consultant as a cc.

TECHNICAL REPORT REQUEST

Tudor Hall Apartments, LP RO0003165 May 26, 2016, Page 2

Please upload technical reports to the ACEH ftp site (Attention: Keith Nowell), and to the SWRCB Geotracker website, in accordance with the following specified file naming convention by the date specified below:

- June 28, 2016 Claim site in GeoTracker
- June 28, 2016 Electronic Submittal of Information
- June 28, 2016 Environmental Consultant Contact Information (provided by electronic mail Attn. Keith Nowell)
- July 29, 2016 Work Plan (file to be named: RO0003165_WP_R_yyyy-mm-dd)

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

Thank you for your cooperation. Should you have any questions or concerns regarding this correspondence or your case, please call me at (510) 567-6764 or send me an electronic mail message at keith.nowell@acgov.org.

Sincerely,

Keith Nowell Hazardous Materials Specialist

Attachment 1

Responsible Party(ies) Legal Requirements / Obligations

REPORT REQUESTS

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of reports in electronic form. The electronic copy replaces paper copies and is expected to be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program FTP site are provided on the attached "Electronic Report Upload Instructions." Submission of reports to the Alameda County FTP site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) GeoTracker website. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for all groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitoring wells, and other data to the GeoTracker database over the Internet. Beginning July 1, 2005, these same reporting requirements were added to Spills, Leaks, Investigations, and Cleanup (SLIC) sites. Beginning July 1, 2005, electronic submittal of a complete copy of all reports for all sites is required in GeoTracker (in PDF format). Please **SWRCB** visit the website for more information on these requirements (http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal/).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC)

REVISION DATE: May 15, 2014

ISSUE DATE: July 5, 2005

PREVIOUS REVISIONS: October 31, 2005;

December 16, 2005; March 27, 2009; July 8, 2010,

July 25, 2010

SECTION: Miscellaneous Administrative Topics & Procedures

SUBJECT: Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

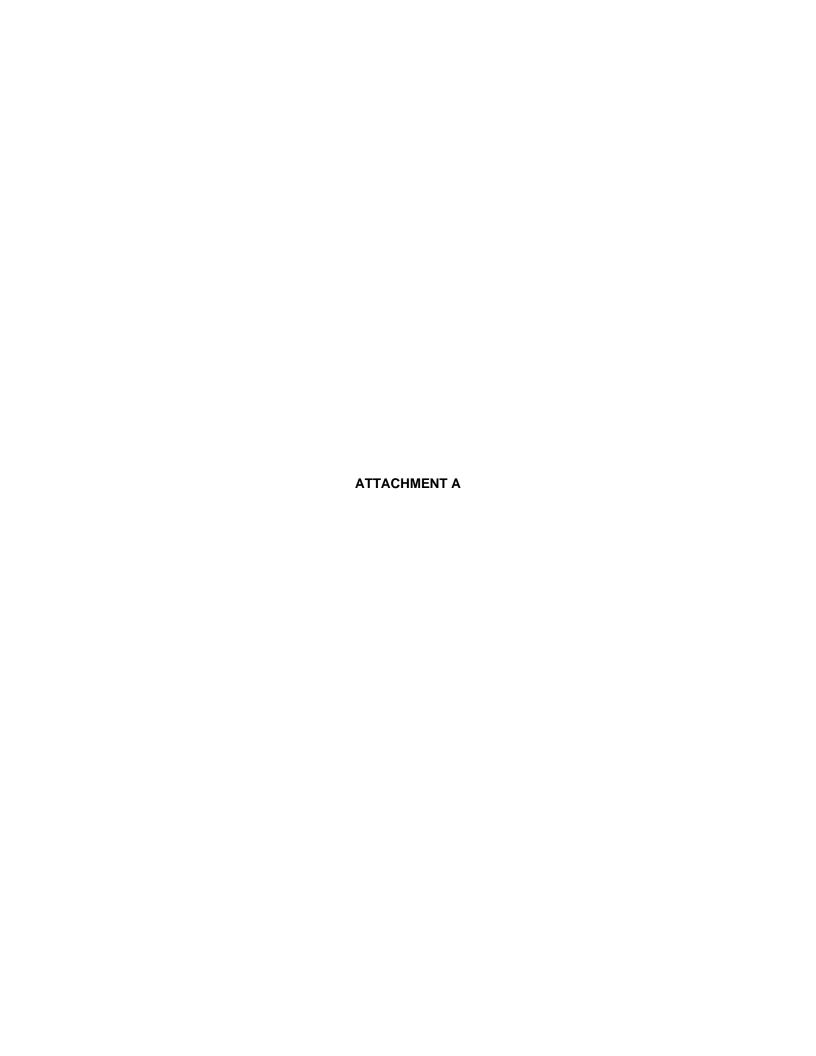

REQUIREMENTS

- Please do not submit reports as attachments to electronic mail.
- Entire report including cover letter must be submitted to the ftp site as a single portable document format (PDF) with no password protection.
- It is preferable that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- Signature pages and perjury statements must be included and have either original or electronic signature.
- <u>Do not</u> password protect the document. Once indexed and inserted into the correct electronic case file, the
 document will be secured in compliance with the County's current security standards and a password. <u>Documents</u>
 with password protection will not be accepted.
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:

RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Submission Instructions

- 1) Obtain User Name and Password
 - a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
 - i) Send an e-mail to deh.loptoxic@acgov.org
 - b) In the subject line of your request, be sure to include "ftp PASSWORD REQUEST" and in the body of your request, include the Contact Information, Site Addresses, and the Case Numbers (RO# available in Geotracker) you will be posting for.
- 2) Upload Files to the ftp Site
 - a) Using Internet Explorer (IE4+), go to ftp://alcoftp1.acgov.org
 - (i) Note: Netscape, Safari, and Firefox browsers will not open the FTP site as they are NOT being supported at this time.
 - b) Click on Page located on the Command bar on upper right side of window, and then scroll down to Open FTP Site in Windows Explorer.
 - c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
 - d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
 - e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.
- Send E-mail Notifications to the Environmental Cleanup Oversight Programs
 - a) Send email to deh.loptoxic@acgov.org notify us that you have placed a report on our ftp site.
 - b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
 - c) The subject line of the e-mail must start with the RO# followed by **Report Upload**. (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO#, use the street address instead.
 - d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

ALAMEDA COUNTY HEALTH CARE SERVICES

AGENCY

ALEX BRISCOE, Agency Director

ENVIRONMENTAL HEALTH SERVICES ENVIRONMENTAL PROTECTION 1131 Harbor Bay Parkway, Suite 250 Alameda, CA 94502-6577 (510) 567-6700 FAX (510) 337-9335

June 22, 2015

Tudor Hall Apartments, LP 800 Airport Boulevard, #510 Burlingame, CA 94010

Subject: Request for Information; Fuel Leak Case No. RO0003165 and GeoTracker Global ID T10000007042, Tudor Hall Apartments, 150 17th Street, Oakland, CA 94612

Dear Responsible Parties:

I would like to take this opportunity to introduce myself. I will be the case worker for the subject Alameda County Environmental Health (ACEH) Local Oversight Program (LOP) case. I have reviewed the ACEH case file and the State Water Resources Control Board's (SWRCBs) GeoTracker website for the above-referenced site. ACEH has not received any documents from you addressing activities associated with the abandonment of a 1,500-gallon heating oil underground storage tank (UST) on March 16, 2015 at the subject site.

The laboratory analytical report documents results of soil samples collected at the subject site on March 11, 2015 contained up to 13,800 milligrams per kilogram (mg/kg) total petroleum hydrocarbons (TPH) in the C10 to C28 range and 1.75 mg/kg total xylenes. These concentrations indicate an unauthorized release has occurred from the underground storage tank system at this site. Upon review of the laboratory analytical report, the ACEH Certified Unified Program Agency (CUPA) transferred the case to the ACEH LOP.

Therefore, please address the following technical comments by the dates specified below:

TECHNICAL COMMENTS

- List Landowners Form In order to insure that site's current property owner has been identified and
 informed of these activities, please complete the attached List Landowners form and return to ACEH
 by the date specified below. Please complete form and submit to the ACEH ftp and GeoTracker
 websites by the date identified below.
- 2. Unauthorized Release Form based on the documented unauthorized release, an Unauthorized Release Form (URF) will need to be completed for the site. A link to the URF is provided below. Please complete the URF and submit to the ACEH ftp and GeoTracker websites by the date identified below. A copy of the URF can be found at the following link:

http://www.waterboards.ca.gov/ust/forms/docs/unauth_release.pdf

3. GeoTracker - Please claim your site and upload existing and all future submittals to GeoTracker and ACEH's ftp websites by the date specified below. Please note that the case will need to be claimed in GeoTracker prior to the electronic submittal of information (ESI) to the SWRCB website requested below. Electronic reporting is described on the attachments. Additional information regarding the SWRCB's GeoTracker website may be obtained online at:

Tudor Hall Apartments LP RO0003165 June 22, 2015, Page 2

http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal/and at

http://www.swrcb.ca.gov/ust/electronic_submittal/report_rqmts.shtml-

Additional information and/or clarification may be obtained by contacting the GeoTracker Help Desk at geotracker@waterboards.ca.gov or (866) 480-1028.

Please provide ACEH with a list of uploaded documents by the date specified below. The document listing may be provided via email to my attention.

- 4. Electronic Submittal of Information In order to initiate a case review, ACEH will need to review all documents related to investigation performed for the site in order to develop an adequate picture of the current status of the case. As requested above, please upload any and all documents pertaining to the tank abandonment, investigation, and remedial activities, including all Phase I and Phase II Environmental Site Assessments, and tank closure reports, for your site to the ACEH ftp and the SWRCB GeoTracker websites. Additionally, GeoTracker requires electronic submittal of information (ESI). Hence, once the site is claimed, please upload the laboratory analysis report(s) in electronic deliverable format (EDF), reports (GEO_REPORTs) and figures (GEO_MAPs) to GeoTracker.
- 5. Data Gap Investigation Work Plan and Focused Site Conceptual Model Due to the presence of residual TPH, please prepare a Data Gap Investigation Work Plan to address the State Water Resources Control Board's (SWRCBs) Low Threat Underground Storage Tank Case Closure Policy (LTCP) criteria identified below. Please support the scope of work in the Data Gap Investigation Work Plan with a focused Site Conceptual Model (SCM) and Data Quality Objectives (DQOs) that relate the data collection to each LTCP criteria. For example, please clarify which scenario within each Media-Specific Criteria a sampling strategy is intended to apply to.

In order to expedite review, ACEH requests the focused SCM be presented in a tabular format that highlights the major SCM elements and associated data gaps, which need to be addressed to progress the site to case closure under the LTCP. Please see Attachment A "Site Conceptual Model Requisite Elements". Please sequence activities in the proposed revised data gap investigation scope of work to enable efficient data collection in the fewest mobilizations possible.

a. General Criteria sections d, e and f - Site visit documentation reports visible oil in the tank pit. No documentation has been provided to ACEH evaluating free product removal. Therefore at this time, it is unclear to ACEH that free product has been removed to the maximum extent practicable.

The Site Conceptual Model (SCM) is inadequate as soil contamination and potential impacts to groundwater have not been adequately addressed, and sensitive receptors have not been identified. ACEH considers the SCM a living document and considers the document incomplete until the site has been shown to meet closure criteria.

As the UST was abandoned in-place, it is unclear to ACEH if secondary source may be present beneath the tank.

- b. <u>Media Specific Criteria for Groundwater</u> Impacts to groundwater have not been evaluated at this site. Therefore, no plume length determination or stability evaluation, if warranted, can be performed.
- c. <u>Media Specific Criteria for Vapor Intrusion to Indoor Air</u> The distribution of total petroleum hydrocarbons (TPH) in soil within the proximity to the foundation has not been evaluated. Oxygen

Tudor Hall Apartments LP RO0003165 June 22, 2015, Page 3

data and soil gas sampling has not been conducted. Therefore, no vapor intrusion to indoor air determination, if warranted, can be performed.

d. Media Specific Criteria for Direct Contact – It is unclear to ACEH that the distribution of TPH and fuel components in soil in the subsurface has been adequately characterized in relation to the LTCP. Therefore, direct contact exposure determination, if warranted, can be performed.

TECHNICAL REPORT REQUEST

Please upload technical reports to the ACEH ftp site (Attention: Keith Nowell), and to the State Water Resources Control Board's Geotracker website, in accordance with the following specified file naming convention and schedule:

- July 20, 2015 Claim Site in GeoTracker
- July 20, 2015 –List of Landowners Form (file to be named LNDOWNR_F_yyyy-mm-dd)
- July 20, 2015 Unauthorized Release Form (file to be named URF_R_yyyy-mm-dd)
- July 20, 2015 Electronic Submittal of Information
- July 20, 2015 List of uploaded documents (provided via email Attn.: Keith Nowell)
- August 31, 2015 Data Gap Identification Work Plan (file to be named RO0003165_WP_R_yyyy- mm-dd).

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

Online case files are available for review at the following website: http://www.acgov.org/aceh/index.htm.

If your email address does not appear on the cover page of this notification, ACEH is requesting you provide your email address so that we can correspond with you quickly and efficiently regarding your case.

Thank you for your cooperation. ACEH looks forward to working with you and your consultants to advance the case toward closure. Should you have any questions regarding this correspondence or your case, please call me at (510) 567-6764 or send an electronic mail message at keith.nowell@acgov.org.

Sincerely,

Digitally signed by Keith Nowell DN: cn=Keith Nowell, o=Alameda County, ou=Department of Environmental Health, email=keith.nowell@acgov.org, c=US

Responsible Party(ies) Legal Requirements / Obligations

REPORT REQUESTS

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of reports in electronic form. The electronic copy replaces paper copies and is expected to be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program FTP site are provided on the attached "Electronic Report Upload Instructions." Submission of reports to the Alameda County FTP site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) GeoTracker website. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for all groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitoring wells, and other data to the GeoTracker database over the Internet. Beginning July 1, 2005, these same reporting requirements were added to Spills, Leaks, Investigations, and Cleanup (SLIC) sites. Beginning July 1, 2005, electronic submittal of a complete copy of all reports for all sites is required in GeoTracker (in PDF format). Please visit the **SWRCB** website for more information these requirements (http://www.waterboards.ca.gov/water issues/programs/ust/electronic submittal/).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

SUBJECT: Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

REQUIREMENTS

- Please do not submit reports as attachments to electronic mail.
- Entire report including cover letter must be submitted to the ftp site as a single portable document format (PDF) with no password protection.
- It is preferable that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- Signature pages and perjury statements must be included and have either original or electronic signature.
- Do not password protect the document. Once indexed and inserted into the correct electronic case file, the document will be secured in compliance with the County's current security standards and a password. Documents with password protection will not be accepted.
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:

RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Submission Instructions

- 1) Obtain User Name and Password
 - a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
 - i) Send an e-mail to deh.loptoxic@acgov.org
 - b) In the subject line of your request, be sure to include "ftp PASSWORD REQUEST" and in the body of your request, include the Contact Information, Site Addresses, and the Case Numbers (RO# available in Geotracker) you will be posting for.
- 2) Upload Files to the ftp Site
 - a) Using Internet Explorer (IE4+), go to ftp://alcoftp1.acgov.org
 - (i) Note: Netscape, Safari, and Firefox browsers will not open the FTP site as they are NOT being supported at this time.
 - b) Click on Page located on the Command bar on upper right side of window, and then scroll down to Open FTP Site in Windows Explorer.
 - c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
 - d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
 - e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.
- 3) Send E-mail Notifications to the Environmental Cleanup Oversight Programs
 - a) Send email to deh.loptoxic@acgov.org notify us that you have placed a report on our ftp site:
 - b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
 - c) The subject line of the e-mail must start with the RO# followed by **Report Upload**. (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO#, use the street address instead.
 - d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

ATTACHMENT A

Site Conceptual Model Requisite Elements

ATTACHMENT A

Site Conceptual Model

The site conceptual model (SCM) is an essential decision-making and communication tool for all interested parties during the site characterization, remediation planning and implementation, and closure process. A SCM is a set of working hypotheses pertaining to all aspects of the contaminant release, including site geology, hydrogeology, release history, residual and dissolved contamination, attenuation mechanisms, pathways to nearby receptors, and likely magnitude of potential impacts to receptors.

The SCM is initially used to characterize the site and identify data gaps. As the investigation proceeds and the data gaps are filled, the working hypotheses are modified, and the overall SCM is refined and strengthened until it is said to be "validated". At this point, the focus of the SCM shifts from site characterization towards remedial technology evaluation and selection, and later remedy optimization, and forms the foundation for developing the most cost-effective corrective action plan to protect existing and potential receptors.

For ease of review, Alameda County Environmental Health (ACEH) requests utilization of tabular formats to (1) highlight the major SCM elements and their associated data gaps which need to be addressed to progress the site to case closure (see Table 1 of attached example), and (2) highlight the identified data gaps and proposed investigation activities (see Table 2 of the attached example). ACEH requests that the tables presenting the SCM elements, data gaps, and proposed investigation activities be updated as appropriate at each stage of the project and submitted with work plans, feasibility studies, corrective action plans, and requests for closures to support proposed work, conclusions, and/or recommendations.

The SCM should incorporate, but is not limited to, the topics listed below. Please support the SCM with the use of large-scaled maps and graphics, tables, and conceptual diagrams to illustrate key points. Please include an extended site map(s) utilizing an aerial photographic base map with sufficient resolution to show the facility, delineation of streets and property boundaries within the adjacent neighborhood, downgradient irrigation wells, and proposed locations of transects, monitoring wells, and soil vapor probes.

- a. Regional and local (on-site and off-site) geology and hydrogeology. Include a discussion of the surface geology (e.g., soil types, soil parameters, outcrops, faulting), subsurface geology (e.g., stratigraphy, continuity, and connectivity), and hydrogeology (e.g., waterbearing zones, hydrologic parameters, impermeable strata). Please include a structural contour map (top of unit) and isopach map for the aquitard that is presumed to separate your release from the deeper aquifer(s), cross sections, soil boring and monitoring well logs and locations, and copies of regional geologic maps.
- b. Analysis of the hydraulic flow system in the vicinity of the site. Include rose diagrams for depicting groundwater gradients. The rose diagram shall be plotted on groundwater elevation contour maps and updated in all future reports submitted for your site. Please address changes due to seasonal precipitation and groundwater pumping, and evaluate the potential interconnection between shallow and deep aquifers. Please include an analysis of vertical hydraulic gradients, and effects of pumping rates on hydraulic head from nearby water supply wells, if appropriate. Include hydraulic head in the different water bearing zones and hydrographs of all monitoring wells.
- c. Release history, including potential source(s) of releases, potential contaminants of concern (COC) associated with each potential release, confirmed source locations, confirmed release locations, and existing delineation of release areas. Address primary leak source(s) (e.g., a tank, sump, pipeline, etc.) and secondary sources (e.g., high-

ATTACHMENT A

Site Conceptual Model (continued)

concentration contaminants in low-permeability lithologic soil units that sustain groundwater or vapor plumes). Include local and regional plan view maps that illustrate the location of sources (former facilities, piping, tanks, etc.).

- d. Plume (soil gas and groundwater) development and dynamics including aging of source(s), phase distribution (NAPL, dissolved, vapor, residual), diving plumes, attenuation mechanisms, migration routes, preferential pathways (geologic and anthropogenic), magnitude of chemicals of concern and spatial and temporal changes in concentrations, and contaminant fate and transport. Please include three-dimensional plume maps for groundwater and two-dimensional soil vapor plume plan view maps to provide an accurate depiction of the contaminant distribution of each COC.
- e. Summary tables of chemical concentrations in different media (i.e., soil, groundwater, and soil vapor). Please include applicable environmental screening levels on all tables. Include graphs of contaminant concentrations versus time.
- f. Current and historic facility structures (e.g., buildings, drain systems, sewer systems, underground utilities, etc.) and physical features including topographical features (e.g., hills, gradients, surface vegetation, or pavement) and surface water features (e.g. routes of drainage ditches, links to water bodies). Please include current and historic site maps.
- g. Current and historic site operations/processes (e.g., parts cleaning, chemical storage areas, manufacturing, etc.).
- h. Other contaminant release sites in the vicinity of the site. Hydrogeologic and contaminant data from those sites may prove helpful in testing certain hypotheses for the SCM. Include a summary of work and technical findings from nearby release sites, including the two adjacent closed LUFT sites, (i.e., Montgomery Ward site and the Quest Laboratory site).
- i. Land uses and exposure scenarios on the facility and adjacent properties. Include beneficial resources (e.g., groundwater classification, wetlands, natural resources, etc.), resource use locations (e.g., water supply wells, surface water intakes), subpopulation types and locations (e.g., schools, hospitals, day care centers, etc.), exposure scenarios (e.g. residential, industrial, recreational, farming), and exposure pathways, and potential threat to sensitive receptors. Include an analysis of the contaminant volatilization from the subsurface to indoor/outdoor air exposure route (i.e., vapor pathway). Please include copies of Sanborn maps and aerial photographs, as appropriate.
- Identification and listing of specific data gaps that require further investigation during subsequent phases of work. Proposed activities to investigate and fill data gaps identified.

TABLE 1 INITIAL SITE CONCEPTUAL MODEL

| | NA | | Two direct push borings and four multi-port wells will be advanced to depth (up to approximately 75 feet bgs) and soil lithology will be logged. See items 4 and 5 on Table 2. | Shallow and deeper groundwater monitoring wells will be installed to provide information on lateral and vertical gradients. See Items 2 and 5 on | NA NA | Obtain data regarding nearby, permitted wells from the California Department of Water Resources and Zone 7 Water Agency (Item 11 on Table 2). |
|---------------------|---|--|--|--|--|--|
| Date Can | None | | As noted, most borings at the site have been advanced Two direct push borings and four multi-port wells to approximately 20 feet bgs, and one boring has been will be advanced and logged to 45 feet bgs, cPT data was advanced and logged to 45 feet bgs, at one location. Lithlologic data items 4 and 5 on Table 2. In the obtained from additional borings that will be advanced on site to further the understanding of the subsurface, especially with respect to deeper lithology. | The on-site shallow groundwater horizontal gradient has not been confirmed. Additionally, it is not known if there may be a Vertical component to the hydraulic ornalient. | None | A formal well survey is needed to identify water- producing, monitoring, cathodic protection, and dewatering wells. |
| Description | The site is in the northwest portion of the Livermore Valley, which consists of a sfructural frough within the beable Range and contains the Livermore Valley Groundwater Basin (referred to as "the Basin") (DWR, 2006). Several adults traverse the Basin, which act as barniers to groundwater flow, as evidenced by large differences in water levels between the upgradient and downgradient sides of these faults (DWR, 2006). The Basin is divided into 12 groundwater basins, which are defined by faults and non-water-bearing geologic units (DWR, 1974). | The hydrogeology of the Basin consists of a thick sequence of fresh-water-bearing continental deposits from alluvial fans, outwash plains, and lacustifine environments to up to approximately 5,000 feet bag (DWR, 2006). Three defined fresh-water bearing geologic units exist within the Basin: Holocene Valley Fill (up to approximately 400 feet bgs in the central portion of the Basin, the Pilo-Pleistocene Livermore Formation (generally between approximately 400 and 4,000 feet bgs in the central portion of the Basin, and the Pilocene Tassajara Formation (generally between approximately 250 and 5,000 or more feet bgs) (DWR, 1974). The Valley Fill units in the western portion of the Basin are capped by up to 40 feet of day (DWR, 2006). | D 0 1 _ | | In 8 dosest surface water bodies are culverted creeks. Martin Canyon Creek flows from a gully west of the site, and then bends to the south, passing approximately 1,000 feet east of the site before flowing into the Alamo Canal. Dubin Creek flows from a gully west of the site, enters a culvert approximately 750 feet south of the site, and then joins Martin Canyon Creek approximately 750 feet south of the site. | The State Water Resources Control Board's GeoTracker GAMA website includes information regarding the Approximate locations of water supply wells in California. In the vicinity of the site, the closest water supply perells presented on this website are depicted approximately 2 miles southeast of the site, the locations wells presented on this website are depicted approximately 2 miles southeast of the site, the locations shown are approximately wells and 0.5 mile for other supply wells, No water-producing wells were identified within 14 mile of the site in the well survey conducted for the Quest Laboratory site (6511 Golden Gate Drive; documented in 2009), information documented in a 2005 report for the Chevron site at 7007 San Ramon Road indicates that a water-producing well may exist within 1/2 mile of the site. |

TABLE 2 DATA GAPS AND PROPOSED INVESTIGATION

| Item | n Data Gap | Proposed Investigation | Part of the state | |
|----------|---|--|---|--|
| ro c | | Evaluate the possible presence of Install four continuous multichannel tubing (CMT) groundwater impacts to deeper groundwater. Evaluate deeper groundwater monitoring wells (aka multi-port wells) to approximately 65 feet bgs in the northern parking of with ports at three deephrs (monitoring concentration trends over time. Well locations may be adjusted pending results of shallow grab obtain data regarding the vertical groundwater samples, we will discuss any potential changes with ACEH before proceeding). Groundwater monitoring frequency to be groundwater gradient. ACEH before proceeding). Groundwater monitoring frequency to be groundwater gradient. ACEH before proceeding). Groundwater monitoring frequency to be groundwater gradient. ACEH before proceeding). Groundwater affect and indications of impacts. Soil itihology will be logged. However, information regarding the moisture content of soil may not be reliable using sonic drilling technology (two borings will be logged below 20 feet bgs. | One well is proposed at the western (upgradient) property boundary to confirm that there are no deeper groundwater impacts from upgradient. Two wells are proposed near the center of the northern parking lot to evaluate potential impacts in an area where deeper impacts, if any, would most likely to be found. One well is proposed at the eastern (downgradient) property boundary to confirm that there are no impacts extending off-site. Port depths will be chosen based on the locations of saturated soils (as logged in direct push borings; see Item 4, above), but are expected at approximately 15, 45, and 60 feet bgs. | Analysis Groundwater: VOCs by EPA Method 8260, dissolved and specific conductance. |
| o | | Install 4 temporary nested soil vapor probes at approximately 4 and 8 feet bgs along the eastern property boundary. Based on the results of the sampling, two sets of nested probes will be converted to vapor monitoring wells to allow for evaluation of VOC concentration trends over time. | Install 4 temporary nested soil vapor probes at approximately 4 and Available data indicate that PCE and TCE are present in soil vapor in the eastern probable and portion of the northern parking for 1.8 and possible on approximately 50-foot probable and portion of the sampling, two sets of nested probes will be converted intervals along the eastern property boundary. Based on the sampling, we set of nested probes will be converted intervals along the eastern property boundary to provide a transact of concentrations to vapor monitoring wells to allow for evaluation of VOC property to the soil column. The depths of 4 and 8 feet bgs are chosen to provide data concentration trends over time. To set of nested vapor plume. The depths of 4 and 8 feet bgs are chosen to provide data concentration trends over time. To set of nested vapor plume. The depths of 4 and 8 feet bgs are chosen to provide data concentration will the soil column. Two also of the permanent wells will be chosen. Two sets of nested vapor probes will be converted into vapor monitoring wells (by installing well boxes at ground surface); the locations of the permanent wells will be chosen. | Soil vapor: VOCs by EPA Method TO-15. |
| <u> </u> | Evaluate potential for off-site migration of impacted groundwater in the downgradient direction (east). | Advance two borings to approximately 20 feet bgs in the parking lot of the property east of the Crown site for collection of grab groundwater samples. | ₽ O | Groundwater: VOCs by EPA Method 8260, dissolved oxygen, oxidation/reduction potential, temperature, pH, and specific conductance. |
| × (| | | The highest concentrations of PCE in groundwater were detected at boing NM-B- 32, just north of Building A. The nearest available data to the north are approximately oxygen, oxidation/reduction potential, temperature, p.H. 75 feet away. One of the borings will be advanced approximately 20 feet north of NM-land specific conductance. 8-32 to provide data close to the highest concentration area. A second boing will be advanced approximately halfway between the first boring and former boring NM-B- 33 to provide additional spatial data for contouring purposes. These borings will be collected using field preservation in accordance with part of a transect in the highest concentration area. | Groundwater: VOCs by EPA Method 8260, dissolved oxygen, oxidation/reduction potential, temperature, pH, and specific conductance. Soil: VOCs by EPA Method 8260 (soil samples to be collected using field preservation in accordance with EPA Method 6035). |
| D | Evaluate VOC concentrations in soil vapor in the south parcel of the site. | pproximately 5 feet bgs cted in soil vapor at a | PCE was detected in soil vapor sample SV-25 in the southern parcel, although was not detected in groundwater in that area. Three probes will be installed approximately 30 feet from of boring SV-25 to attempt to delineate the extent of impacts. A fourth probe is proposed west of the original sample, close to the property boundary and the location of mapped utility lines, which may be a potential conduit, to evaluate potential impacts from the west. | Soil vapor: VOCs by EPA Method TO-15. |
| 9 | Obtain additional information regarding subsurface structures and utilities to further evaluate migration pathways and sources. | Ground penetrating radar (GPR) and other utility locating methodologies will be used, as appropriate, to further evaluate the presence of unknown utilities and structures at the site. | Utilities have been identified at the site that include an on-site sewer lateral and drain line, and shallow water, electric, and gas lines. Given the current understanding of the distribution of PCE in groundwater at the site, it is possible that other subsurface utilities, and specifically sewer laterals, exist that may act as a source or migration pathway for distribution of VOCs in the subsurface. | NA |
