Subject: Report of Results
Subsurface Investigation
39155 and 39183 State Street, Fremont, California

Project No.: 1098.007.01.012

This memorandum presents the results of Phase II testing conducted at the vacant property located at 39155 and 39183 State Street in Fremont, California (the site; see Plate 1). PES recently prepared a Phase I Environmental Site Assessment (ESA) for the site, and based on the results of the ESA, soil and soil vapor sampling and analysis were performed as part of Phase II activities. The objective of the investigation was to evaluate the chemical characteristics of the soil and soil vapor beneath the site to assess if they have been impacted by prior site usage or potential off-site sources of contamination. The site, which covers an area of approximately 6.9 acres, consists of two adjacent asphalt-paved lots with several landscaped areas.[1] The site was formerly occupied by a Nob Hill grocery store/Payless drug store building which was demolished in 2001. The site has been vacant since then and is currently owned by the City of Fremont. The planned redevelopment of the site includes commercial buildings with subsurface parking along the northwestern portion of the site, and slab-on-grade residential buildings to the southeast[2].

INVESTIGATION METHODS

The investigation was conducted in three phases in October and December 2014, and January 2015. A corresponding work plan for each phase of site investigation was submitted

[1] For the purposes of the ESA and the Phase II activities the 6.9-acre property was considered the site. Subsequently, PES was informed that the borings completed along the north western side of the site were not a part of the subject property; rather they are within the future extension of Capitol Avenue. The correct subject property boundary is depicted on Plates 1 – 3.

to the Alameda County Water District (ACWD) on September 26, 2014, December 2, 2014, and January 26, 2014[3]. The investigations included completing 40 borings (B1 through B40) for soil and/or soil vapor sample collection. The approximate locations of the borings are shown on Plate 2. The pre-field activities, sampling methods, analytical testing methods, and analytical results are discussed below. Drilling and sampling activities were conducted under the direction of a California-registered geologist.

Field Preparation Activities

Drilling permits were obtained from ACWD prior to drilling. Copies of the drilling permits are included as Attachment A to this report. PES contacted Underground Service Alert at least 48 hours prior to the start of drilling activities. C. Cruz Sub-Surface Locators, Inc. (C. Cruz) of Milpitas, California, a private utility locating company, was retained to clear each of the boring locations for subsurface utilities or other features. Additionally, PES coordinated with TEG – Northern California, Inc. (TEG) of Rancho Cordova, California, a licensed drilling contractor possessing a valid C-57 California water well contractor's license, to schedule the drilling, sampling, and mobile laboratory services. A site-specific Health and Safety Plan was prepared for the investigation. For the third phase of the investigation, several borings were advanced along State Street and in the sidewalk adjacent to the site. Accordingly, PES obtained an encroachment permit from the City of Fremont and retained a traffic control subcontractor to perform flagging and lane closure services.

Sampling and Analytical Procedures

Under subcontract to PES, TEG utilized a track-mounted direct-push drilling rig to advance the borings to depths ranging from 5 to 45 feet below ground surface (bgs). Deep borings (e.g., to depths of 45 bgs) were advanced as deep as possible using the available direct push equipment in an attempt to sample groundwater. Unfortunately, the drill rig met with refusal and no groundwater was encountered; no groundwater was sampled as had been planned in the initial work plan (PES, 2014a).

Ten (10) soil borings were advanced across the site. The soil borings were sampled at two depth intervals (1 to 2 feet bgs and 3 to 4 feet bgs) for chemical analysis. The deeper soil sample was put on hold at the laboratory pending the results of the shallow soil sample analysis.

Continuous soil cores were collected by driving a 4-foot long by 2-inch outside-diameter open-tube sampler into undisturbed soil. The open-tube sampler was lined with one 4-foot long, clear acetate sample sleeve. Soil samples were collected for non-volatile compounds in the acetate sample sleeve. The acetate sample sleeve was cut at the appropriate depth interval into a 12-inch long section, and sealed with Teflon liners and plastic end caps to prevent moisture and/or contaminant loss. Soil samples submitted for analysis by U.S. Environmental Protection Agency (U. S. EPA) Test Method 8260B were collected in accordance with U.S. EPA Test Method 5035 using Terracore™ samplers.

The soil samples were labeled to indicate project location, job number, boring number, sample number, and time and date collected and then immediately placed in a thermally-insulated cooler containing ice. The soil samples were picked up by a courier that transported them under chain of custody protocol to Curtis & Tompkins, Ltd. (C&T) of Emeryville, California, a California state-certified laboratory for the requested chemical analyses. Soil samples were analyzed for organochlorine pesticides by U.S. EPA Test Method 8081, total lead and arsenic by U.S. EPA Test Method 6010, and volatile organic compounds (VOCs) by U.S. EPA Test Method 8260B.

Soil vapor borings were sampled in accordance with the most current guidance document: *Advisory - Active Soil Gas Investigations,* published by the California Environmental Protection Agency (Department of Toxic Substances Control (DTSC), California Regional Water Quality Control Board – Los Angeles Region, and RWQCB – San Francisco Region), dated April 2012.

A majority of the on-site soil vapor borings were collected at a depth of 5 feet bgs. In addition, three (3) on-site samples were collected at a depth of 10 feet bgs. Soil gas samples collected alongside the sanitary sewer utility that runs from northwest to southeast along the approximate centerline of State Street were collected at a depth of approximately 9 feet bgs to coincide with the approximate depth of the sewer line. Lastly, soil gas samples collected in the sidewalk north of the subject property, adjacent to a sanitary sewer lateral and a storm drain lateral that formerly serviced the site, were collected at depths of 8.75 and 6 feet bgs, respectively.

Soil vapor samples were analyzed by TEG's mobile laboratory for VOCs by U.S. EPA Test Method 8260B.

To reduce the potential for cross-contamination between sampling locations, downhole drilling and sampling equipment were thoroughly cleaned prior to initiating work and between sampling locations. Sampling equipment was washed in a dilute Alconox (or equivalent) solution, rinsed with potable water, and final rinsed with distilled water between each sampling location. Direct-push drilling equipment was decontaminated with a high-pressure hot water

wash between sampling locations. Upon completion of sampling activities, each borehole was grouted to the surface with neat cement in accordance with ACWD requirements and with the oversight of the ACWD.

ANALYTICAL RESULTS

Copies of the laboratory analytical reports and chain-of-custody documentation are presented in Attachment B. A summary of the analytical results for the soil and soil vapor samples are summarized in Tables 1 through 3.

Soil Vapor Samples

As indicated on Table 1, several VOCs were identified during the soil vapor investigation. However, only benzene and tetrachloroethylene (PCE) were detected above the Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) Tier 1 environmental screening levels (ESLs) for soil gas in a residential land use setting.

To further evaluate the data, site-specific vapor intrusion screening levels (e.g., Tier 2 screening levels) for benzene and PCE (160 micrograms per cubic meter [$\mu g/m^3$] and 1,260 $\mu g/m^3$, respectively) were calculated for the residential land use scenario based on the observed subsurface soil conditions (clay soils) and using the Department of Toxic Substances Control (DTSC) vapor intrusion model.[4] A copy of the output for the DTSC Vapor Intrusion Screening Model – Soil Gas is provided in Attachment C. Two on-site samples exceed the site-specific vapor intrusion screening level for PCE (1,260 $\mu g/m^3$); borings B21 (8,500 $\mu g/m^3$) and B30 (1,700 $\mu g/m^3$), located adjacent to State Street. The only boring that exceeded the site-specific screening level for benzene was boring B4, located in the southern portion of the site. The concentration of benzene detected (480 $\mu g/m^3$), slightly exceeds the site-specific vapor intrusion screening level of 160 $\mu g/m^3$.

As shown on Plate 3 and summarized on Table 1, all of the soil vapor samples collected within State Street (adjacent to the sewer) and in the sidewalk contained PCE and all detections exceed the residential ESL. The maximum off-site concentration of PCE was 23,000 $\mu g/m^3$ in boring B38.

[4] DTSC, 2014. Department of Toxic Substance Control, Vapor Intrusion Screening Model - Soil Gas. December. The default soil type was adjusted to reflect the site-specific soil type (clay) that is present within the top 5 feet of the site.

Soil Samples

As indicated on Table 2, total lead was detected in all ten shallow soil samples, at concentrations ranging from 5.1 milligrams per kilogram (mg/kg) to 13 mg/kg. The residential ESL for lead (80 mg/kg) was not exceeded and the detections likely represent background conditions.

Total arsenic was detected in all ten shallow soil samples, at concentrations ranging from 4.3 mg/kg to 8.2 mg/kg. The residential ESL for arsenic (0.39 mg/kg) was exceeded in each sample. However, all detections are below the established background concentration for Bay Area soils of 11 mg/kg.[5]

Soil samples identified concentrations of the organochlorine pesticides endrin and dieldrin in 6 out of 16 samples that exceed the ESL for residential land use. However, no samples exceed the direct exposure soil screening levels for a residential exposure scenario[6].

As indicated on Table 3, no VOCs were detected above their respective laboratory reporting limits, except for acetone. Acetone was detected at a concentration of 14 micrograms per kilogram (μg/Kg) in boring B3 at a depth of 1.0 to 2.0 feet bgs. This concentration is below the residential ESL.

DISCUSSION OF RESULTS AND CONCLUSIONS

Based on the results of the investigation described herein, soil vapor PCE concentrations above the site-specific soil vapor screening level are limited to a small area on the northeastern portion of the site, adjacent to State Street. The pattern of detections and the high concentrations of PCE in soil vapor samples collected within State Street adjacent to the sewer line point to the State Street sewer as the source of the PCE in soil gas. In other words, a PCE vapor cloud appears to be emanating from the State Street sewer and has locally migrated onto the subject property. The only benzene detection that exceeded the site-specific soil vapor screening level was an isolated low concentration occurrence in the southern portion of the site. Testing in the vicinity of the sample was unable to identify a source area or widespread contamination.

CASE NARRATIVE

Laboratory number:	**262033**
Client:	**PES Environmental, Inc.**
Project:	**1098.007.01.001**
Location:	**39155 & 39183 State St., Fremont**
Request Date:	**10/27/14**
Samples Received:	**10/27/14**

This data package contains sample and QC results for four soil samples, requested for the above referenced project on 10/27/14. The samples were received cold and intact.

Volatile Organics by GC/MS (EPA 8260B):
Matrix spikes were not performed for this analysis in batch 216939 due to insufficient sample amount. No other analytical problems were encountered.

Pesticides (EPA 8081A):
All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. No analytical problems were encountered.

Metals (EPA 6010B):
Lead was detected above the RL in the method blank for batch 216863; this analyte was detected in samples at a level at least 10 times that of the blank. No other analytical problems were encountered.

1. Did cooler come with a shipping slip (airbill, etc) YES (NO)
   Shipping info
2A. Were custody seals present? .... ☐ YES (circle) on cooler on samples ☒ NO
   How many Name Date
2B. Were custody seals intact upon arrival? YES NO (N/A)
3. Were custody papers dry and intact when received? (YES) NO
4. Were custody papers filled out properly (ink, signed, etc)? (YES) NO
5. Is the project identifiable from custody papers? (If so fill out top of form) (YES) NO
6. Indicate the packing in cooler: (if other, describe)

   ☐ Bubble Wrap ☐ Foam blocks ☒ Bags ☐ None
   ☐ Cloth material ☐ Cardboard ☐ Styrofoam ☐ Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

   Type of ice used: ☒ Wet ☐ Blue/Gel ☐ None Temp(°C)

   ☐ Samples Received on ice & cold without a temperature blank; temp. taken with IR gun

   ☒ Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? (YES) NO
   If YES, what time were they transferred to freezer? 1950
9. Did all bottles arrive unbroken/unopened? (YES) NO
10. Are there any missing / extra samples? YES (NO)
11. Are samples in the appropriate containers for indicated tests? (YES) NO
12. Are sample labels present, in good condition and complete? (YES) NO
13. Do the sample labels agree with custody papers? (YES) NO
14. Was sufficient amount of sample sent for tests requested? (YES) NO
15. Are the samples appropriately preserved? (YES) NO N/A
16. Did you check preservatives for all bottles for each sample? YES NO (N/A)
17. Did you document your preservative check? YES NO (N/A)
18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO (N/A)
19. Did you change the hold time in LIMS for preserved terracores? YES NO (N/A)
20. Are bubbles > 6mm absent in VOA samples? YES NO (N/A)
21. Was the client contacted concerning this sample delivery? YES (NO)
   If YES, Who was called? By Date:

CASE NARRATIVE

Laboratory number:	**262069**
Client:	**PES Environmental, Inc.**
Project:	**1098.007.01.001**
Location:	**State Street, Fremont**
Request Date:	**10/28/14**
Samples Received:	**10/28/14**

This data package contains sample and QC results for four soil samples, requested for the above referenced project on 10/28/14. The samples were received cold and intact.

Volatile Organics by GC/MS (EPA 8260B):
Matrix spikes were not performed for this analysis in batch 216939 due to insufficient sample amount. No other analytical problems were encountered.

Pesticides (EPA 8081A):
All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. No analytical problems were encountered.

Metals (EPA 6010B):
No analytical problems were encountered.

CASE NARRATIVE

Laboratory number:	**262098**
Client:	**PES Environmental, Inc.**
Project:	**1098.007.01.001**
Location:	**39155 & 39183 State St., Fremont**
Request Date:	**10/30/14**
Samples Received:	**10/30/14**

This data package contains sample and QC results for five soil samples, requested for the above referenced project on 10/30/14. The samples were received cold and intact.

Volatile Organics by GC/MS (EPA 8260B):
No analytical problems were encountered.

Pesticides (EPA 8081A):
All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. B12-1.0-2.0 (lab # 262098-005) and B13-1.0-2.0 (lab # 262098-007) were diluted due to the color of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B):
No analytical problems were encountered.

CASE NARRATIVE

Laboratory number:	**262486**
Client:	**PES Environmental, Inc.**
Project:	**1098.007.01.001**
Location:	**39155 & 39183 State St., Fremont**
Request Date:	**11/13/14**
Samples Received:	**10/27/14**

This data package contains sample and QC results for one soil sample, requested for the above referenced project on 11/13/14. The sample was received cold and intact.

Pesticides (EPA 8081A):

All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. Low recovery was observed for 4,4'-DDT in the MSD of B8-3.0-4.0 (lab # 262487-003); the LCS was within limits. High recovery was also observed for 4,4'-DDT in the MS of B8-3.0-4.0 (lab # 262487-003); the LCS was within limits. High RPD was also observed for 4,4'-DDT in the MS/MSD of B8-3.0-4.0 (lab # 262487-003). 262486-001 was prepared outside of hold time; affected data was qualified with "b". No other analytical problems were encountered.

CASE NARRATIVE

Laboratory number:	**262487**
Client:	**PES Environmental, Inc.**
Project:	**1098.007.01.001**
Location:	**State Street, Fremont**
Request Date:	**11/13/14**
Samples Received:	**10/28/14**

This data package contains sample and QC results for three soil samples, requested for the above referenced project on 11/13/14. The samples were received cold and intact.

Pesticides (EPA 8081A):

All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. Low recovery was observed for 4,4'-DDT in the MSD of B8-3.0-4.0 (lab # 262487-003); the LCS was within limits. High recovery was also observed for 4,4'-DDT in the MS of B8-3.0-4.0 (lab # 262487-003); the LCS was within limits. High RPD was also observed for 4,4'-DDT in the MS/MSD of B8-3.0-4.0 (lab # 262487-003). 262487-001, 262487-002, and 262487-003 were prepared outside of hold time; affected data was qualified with "b". B8-3.0-4.0 (lab # 262487-003) was diluted due to the color of the sample extract. No other analytical problems were encountered.

CASE NARRATIVE

Laboratory number:	**262490**
Client:	**PES Environmental, Inc.**
Project:	**1098.007.01.001**
Location:	**39155 & 39183 State St., Fremont**
Request Date:	**11/13/14**
Samples Received:	**10/30/14**

This data package contains sample and QC results for two soil samples, requested for the above referenced project on 11/13/14. The samples were received cold and intact.

Pesticides (EPA 8081A):

All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. Low recovery was observed for 4,4'-DDT in the MSD of B8-3.0-4.0 (lab # 262487-003); the LCS was within limits. High recovery was also observed for 4,4'-DDT in the MS of B8-3.0-4.0 (lab # 262487-003); the LCS was within limits, and this analyte was not detected at or above the RL in the associated samples. High RPD was also observed for 4,4'-DDT in the MS/MSD of B8-3.0-4.0 (lab # 262487-003); this analyte was not detected at or above the RL in the associated samples. 262490-001 and 262490-002 were prepared outside of hold time; affected data was qualified with "b". No other analytical problems were encountered.

SUBJECT: DATA REPORT - PES Environmental, Inc. Project # 109800701001
39155 State Street, Fremont, California

TEG Project # 41027F

Mr. Michelsen:

Please find enclosed a data report for the samples analyzed from the above referenced project for PES Environmental. The samples were analyzed on site in TEG's mobile laboratory. TEG conducted a total of 19 analyses on 19 soil vapor samples.

-- 19 analyses on soil vapors for selected volatile organic hydrocarbons by EPA method 8260B.

The results of the analyses are summarized in the enclosed tables. Applicable detection limits and calibration data are included in the tables.

TEG appreciates the opportunity to have provided analytical services to PES Environmental on this project. If you have any further questions relating to these data or report, please do not hesitate to contact us.

Sincerely,

Mark Jerpbak

SUBJECT: DATA REPORT - PES Environmental, Inc. Project # 109800701001
39155 State Street, Fremont, California

TEG Project # 41210F

Mr. Michelsen:

Please find enclosed a data report for the samples analyzed from the above referenced project for PES Environmental. The samples were analyzed on site in TEG's mobile laboratory. TEG conducted a total of 12 analyses on 12 soil vapor samples.

-- 12 analyses on soil vapors for selected volatile organic hydrocarbons by EPA method 8260B.

The results of the analyses are summarized in the enclosed tables. Applicable detection limits and calibration data are included in the tables.

TEG appreciates the opportunity to have provided analytical services to PES Environmental on this project. If you have any further questions relating to these data or report, please do not hesitate to contact us.

Sincerely,

Mark Jerpbak
