**Cc:** Jennifer Brady; David Bush  
**Subject:** RO3181: E&B's GIG Site Excavation Activities

Ms. Brady and Mr. Monroe,

We have reviewed the preliminary results from the soil excavation to date and your request to backfill the excavation with imported fill material in order to have room to continue excavation activities to the west. We have no objection to backfilling the excavation provided that plastic sheeting or other material is placed along the western sidewall of the current excavation to mark the point where future excavation is to be conducted. After the existing excavation is backfilled, we request that excavation be continued to the west to remove remaining soil contamination.

Based on the results presented, the use of approximately 500 cubic yards of backfill material represented by soil samples CF-1 and CF-2 is approved.

Regards,

Jerry Wickham

Jerry,

Attached zip file with backfill request, lab reports, maps and response to questions. Weather is changing, if we can start to backfill sometime this week we can then have room to operate again to continue soil remediation activities.

Thanks for your timely review.

Jeff Monroe

Jeff,

I should begin today to review the results that you have sent for the excavation and fill. I expect to have that complete by next Monday. For each source of fill material, please answer the following questions from my September 30 directive letter. Where these items are already addressed by the materials you have already sent, you can just indicate that the information was provided. Thanks.

- 1) A description including maps and/or aerial photos showing the location(s) where the fill came from.
- 2) Background information and/or reports on the fill source
- 3) The volume of the fill and the volume that each sample represents.
- 4) The type of samples - composite or discrete.
- 5) The type of fill and the heterogeneity.
- 6) Whether the fill contains any debris or construction material.
- 7) Whether any staining or odor was observed.
- 8) Locations and depths where the imported fill is to be placed on site.
- 9) Laboratory analytical results.

**Subject:** E&B's GIG Site Excavation Activities

Jerry,

Attached is just a kmz and jpg google earth files showing the excavation limits and final sample locations. Also where the "clean fill" samples and material are located near the southern portion of the Marshall property. Please note that I am having technical difficulties getting my GPS points to match the GoogleEarth Map. The points are correct east and west, but the polygon needs to slide north approximately 9' to the north. The southern most line should be just 2' north from the trunks of the landscaping trees. I will have it figured out for the drafting soon but you can see where the samples are located in the excavation for now.

You have the current lab date to review. We are requesting to backfill the excavation as quickly as I can schedule it with the contractor using the onsite materials on the Marshall property. The excavation is approximately 1300 cubic yards. We will use visqueen as a barrier between the west wall and the backfill material. I anticipate backfilling by the middle of next week pending your approval.

Call me if you have questions.

Thanks,

Jeff

**RE: E&B Natural Resources Management Corporation's Backfill and Import  
ACEHS Remedial Action Case No. RO-0003181**

Dear Mr. Wickham,

During the month of November 2015, E&B Natural Resources Management Corporation (E&B) has been performing the soil remediation activities as described in our Soil Excavation and Groundwater Investigation Work Plan (Work Plan) dated September 16, 2015. At this time the excavation activities appear to be coming near completion, however, we have run out of operating room on site to continue excavating to the west where evidence suggests we need to continue. Attached is the preliminary analytical reports and a sample location map from the latest excavation activities for you review. We would request Alameda County Environmental Health Services (ACEHS) permission to be able to start backfilling the eastern portions of the excavation where the sample results appear to be in line with the goals of our remediation activities.

As requested and agreed upon for the backfilling and import material the following items outlined in your letter dated September 30, 2015, are listed in order under item 3 are as follows:

1&2) Attached Google Earth Aerial maps showing locations of import material that has been sampled which we are requesting to use as our import backfill. The import material we are requesting come from two sources. One, is from the Marshall family road construction activities on the adjacent property to the south of the excavation in an agricultural (pasture) setting. This soil is from the top two feet of native clayey silts.

The second source is a stockpile also on the adjacent property on Patterson Pass Road, Livermore which was imported from a residential construction project in Daly City, see attached manifest supplied by Marshall Brothers for this import material.

3) Samples represent approximately 250 cubic yards each. Discrete samples designated CF1 and

CF3 were collected from the material that was generated at a residential construction project in Daily City (350 + cubic yards), and samples designated CF2, CF4 and CF5 were collected from stockpiles generated from the top 2 feet of native onsite soils located on Patterson Pass Road. Total volume required to backfill the current excavation is approximately 1250 cubic yards. The top of the excavation will be capped with an imported base rock at the completion of backfill activities.

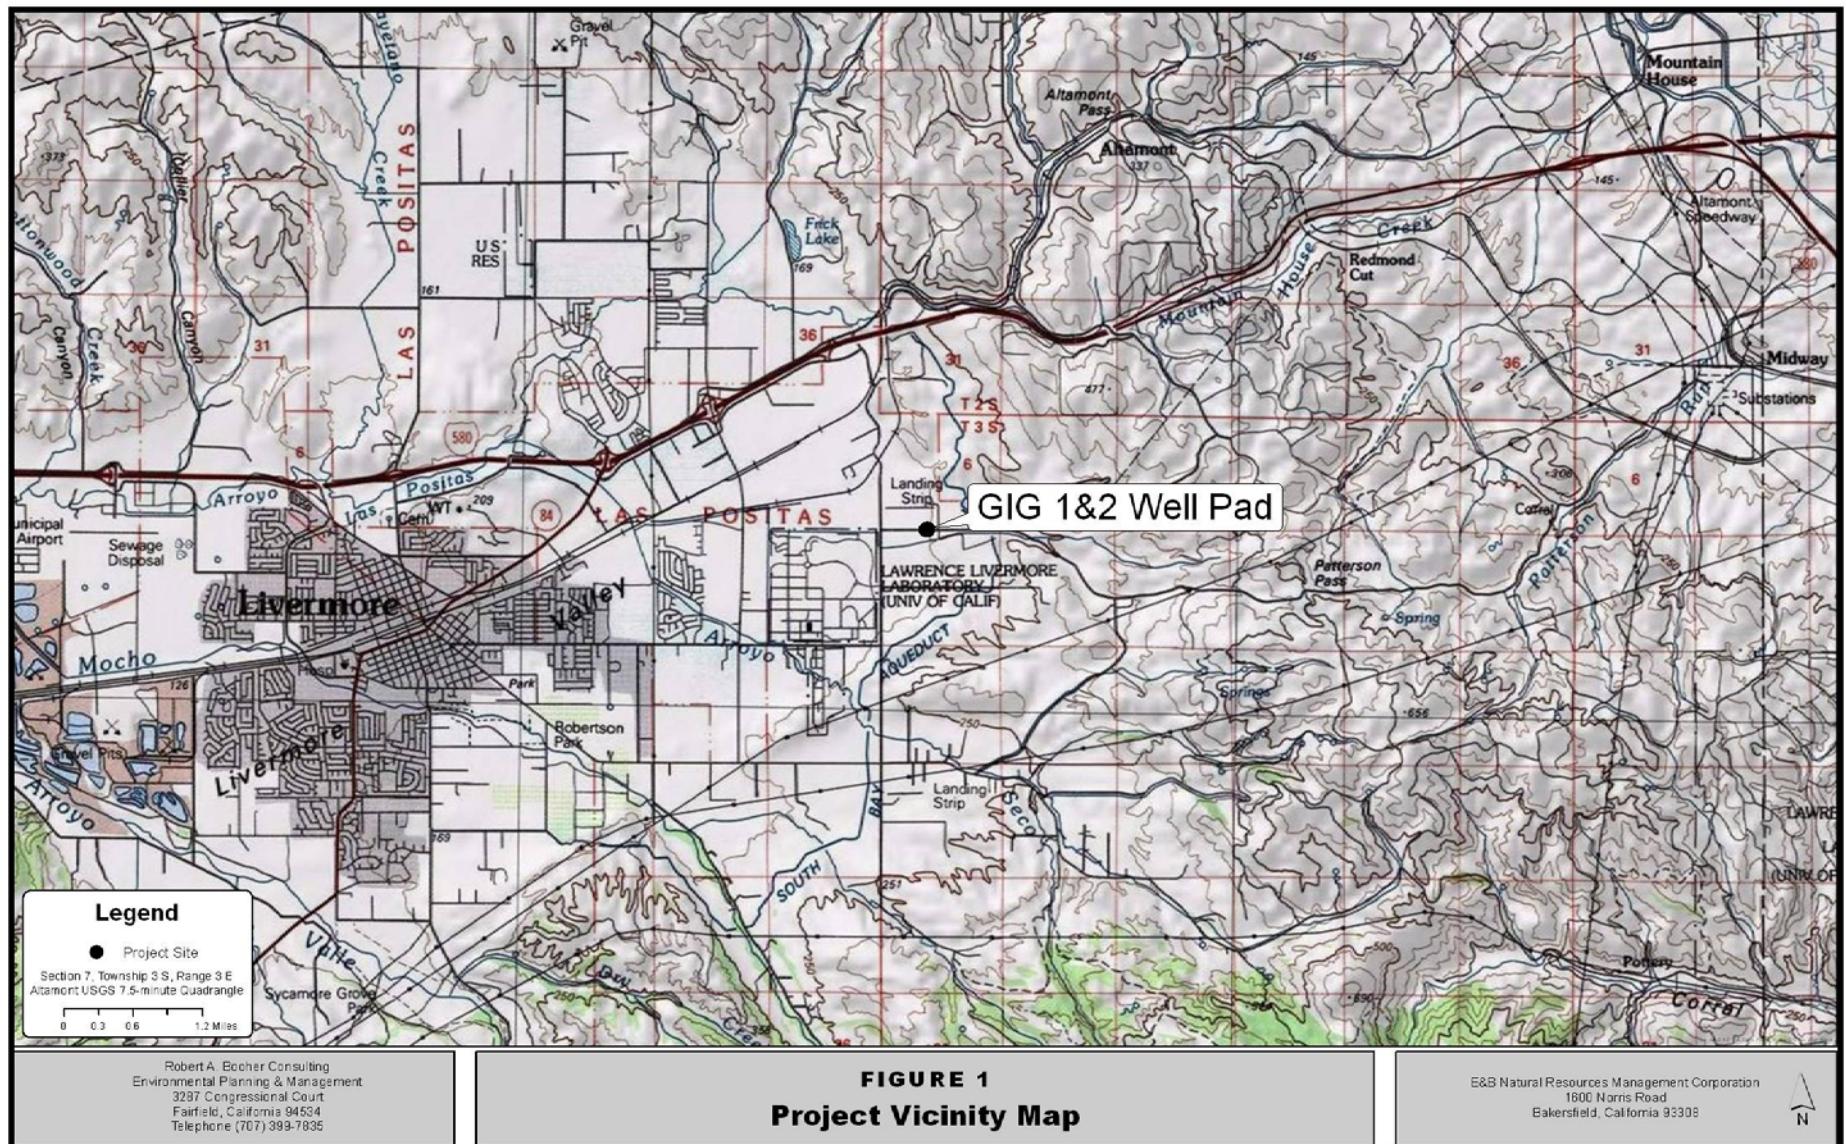

- 4) All samples collected from the proposed import materials were discrete samples
- 5) The soils generated from construction activities in Daily City appear to be a sandy silt with some clays and light yellowish brown in color. The native material generated from road construction activities on the adjacent property is comprised of a medium to dark brown clayey silt to silty clays, medium plasticity.
- 6) No debris, organic fill or construction material was observed in the proposed import materials.
- 7) No staining or odors were observed in any of the proposed import material.
- 8) The material from Daly City appears to be more granular and would be used for the backfill in the deeper portions of the excavation. The balance of the excavation would be backfilled from the soils generated on the adjacent property from the road construction activities.
- 9) Laboratory results attached. The first round of samples were tested following the California Department of Toxic Substances Control Information Advisory, Clean Imported Fill Material (DTSC 2001), and results from CF1 and CF2 are attached, additional samples were then collected as the excavation increased in volume. Additional samples CF3-CF5 have the TPH results attached, additional analyses pending.

Due to the fast approaching winter rains, we are requesting to start scheduling these backfilling activities as quickly as possible. Thanks you for your attention to this matter.

If you have any questions regarding this report, please contact me directly at (530) 237-6628, or you may reach Bob Booher at (707) 399-7835.

Sincerely,

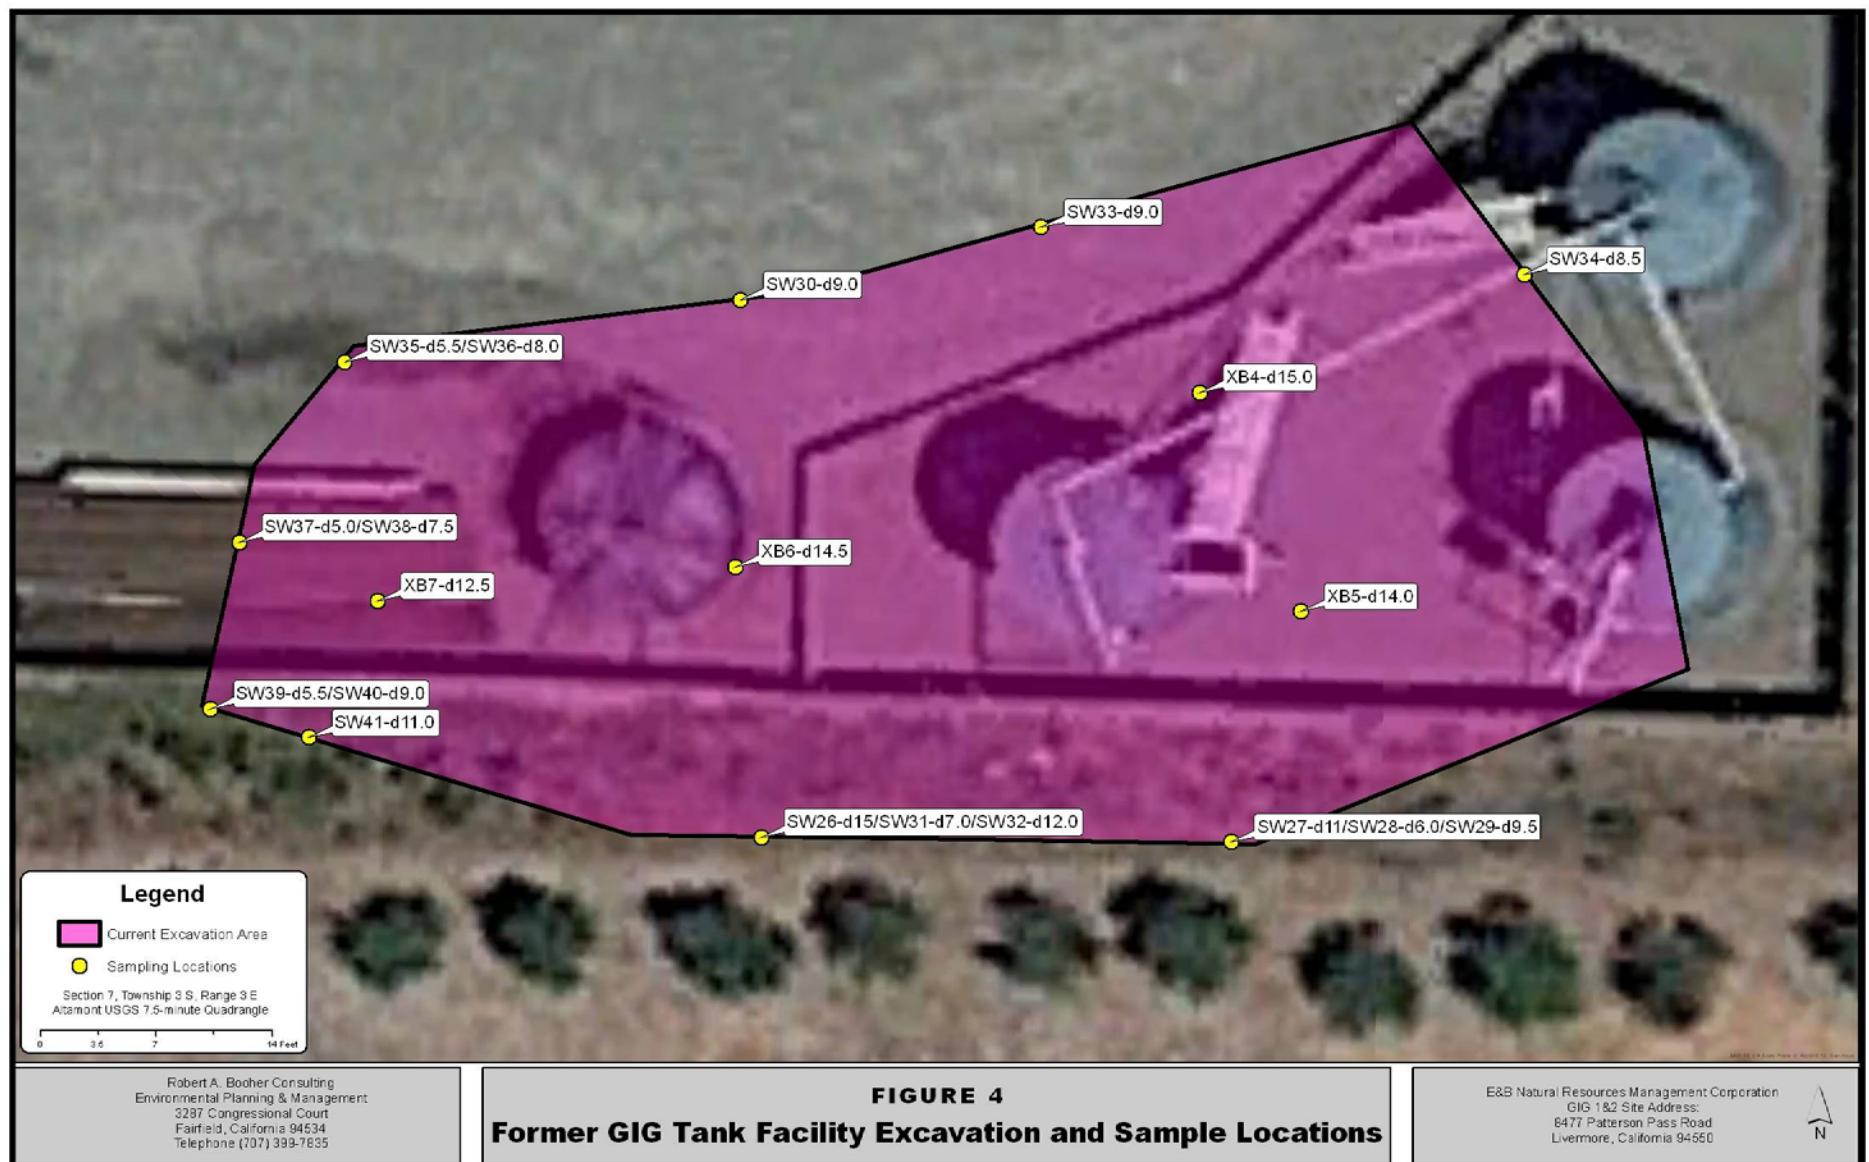

Jeff Monroe  
Project Geologist

Richard Harding, Laboratory Manager  
 or Other Approved Signatory

Due to magnification limitations inherent in PLM, asbestos fibers in dimensions below the resolution capability of PLM may not be detected. Samples reported as <1% or none detected may require additional testing by TEM to confirm asbestos quantities. The limit of detection as stated in the method is 1%. The above test report relates only to the items tested and may not be reproduced in any form without the express written approval of EMSL Analytical, Inc. EMSL's liability is limited to the cost of analysis. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. The test results contained within this report meet the requirements of NELAC unless otherwise noted. Samples received in good condition unless otherwise noted.

Samples analyzed by EMSL Analytical, Inc. Indianapolis, IN

## Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A02	The difference between duplicate readings is less than the quantitation limit.
A07	Detection and quantitation limits were raised due to sample dilution caused by high analyte concentration or matrix interference.
A52	Chromatogram not typical of diesel.
Q03	Matrix spike recovery(s) is(are) not within the control limits.
