Re: Soil Quality Evaluation  
East Bay Bridge Center Improvements  
3839 Emery Street  
Emeryville, California

Dear Mr. Strahs:

On behalf of Federal Realty Investment Trust (Federal Realty), Cornerstone Earth Group (Cornerstone) has prepared this letter presenting the results of the soil samples collected from the East Bay Bridge Center located at 3839 Emery Street in Emeryville, California (Site). This work was performed in accordance with our Agreement with Federal Realty dated December 5, 2014.

This soil sampling was performed to support preparation of the Soil Management Plan (SMP) Addendum dated January 30, 2015 for the proposed tenant improvements at the Site. As discussed in the SMP Addendum, in 1993 up to approximately 7 feet of petroleum hydrocarbon affected fill was placed at the Site and capped by the existing hardscape surfaces (i.e. asphalt pavement or concrete) and building pads. Please refer directly to the SMP Addendum for further details.

### Purpose

Federal Realty is planning to install new landscaping at the Site that will require the excavation and off-haul of at least 1,200 cubic yards of soil. The landscape excavations will extend to a minimum depth of approximately 4 to 5 feet to accommodate the planned landscape improvements; however, additional over-excavation will be performed in some areas where total petroleum hydrocarbon (TPH) affected soil extends beyond the design finished sub-grade trench excavation.

The purpose of the soil sampling presented in this letter is to provide analytical data that can be used by the contractor to help obtain landfill pre-approval of the soil planned for excavation and off-haul.

### Soil Sampling

On December 23, 2014, 10 exploratory borings (EB-1 through EB-10) were advanced at the Site to an approximate depth of 10 feet using a direct-push drill rig. The borings were located in

the approximate areas where landscape excavation activities are planned. The borings were continuously logged by a Cornerstone field geologist in general accordance with the Unified Soil Classification System (USCS). The soil samples collected from the exploratory borings were screened in the field for volatile hydrocarbons using an Organic Vapor Meter (OVM). The subsurface lithologic information, OVM readings, and sample collection intervals are included on the boring logs attached to this letter. Approximate boring locations are shown on Figures 3 and 4.

One fill sample was selected from each boring at depths ranging between approximately 3½ to 4½ feet based on field observations, OVM readings, odors, and/or other signs of apparent contamination. Native soil samples were also collected from the upper approximate ½ foot of soil below the approximate fill-native interface, and from depths of approximately 6, 8, and 10 feet. The ends of the liners were covered in Teflon film, fitted with plastic end caps, taped, and labeled with a unique identification number. Samples analyzed for volatile organic compounds (VOCs) were collected with additional sets of three, 5-gram Core N' One™ capsules following Department of Toxic Substances Control (DTSC) guidance. Each of the samples were placed in an ice-chilled cooler and transported to a state-certified analytical laboratory with chain of custody documentation.

## Analytical Results

Discrete soil samples collected from the fill material and top of the underlying native soil were analyzed for TPHd and TPHo (EPA Test Method 8015B) with a silica gel cleanup, and gasoline-range total petroleum hydrocarbons (TPHg) and volatile organic compounds (VOCs) (EPA Test Method 8260B). Based on these initial analyses, additional (deeper) samples were analyzed for TPHd and TPHo.

For landfill profiling purposes, samples collected from within the fill were composited into 5, two-point composite samples. These composite samples were analyzed for California Assessment Manual (CAM) Metals (EPA Test Method 6010/7471), polycyclic aromatic hydrocarbons (PAHs) (EPA Test Method 8270 SIM), organochlorine pesticides (OCPs) (EPA Test Method 8081), and polychlorinated biphenyls (PCBs) (EPA Test Method 8082).

Detected compounds are presented in the data summary tables attached to this letter. Analytical data sheets and chain of custody documentation are also attached. TPHd and TPHo analytical results are also presented on Figure 4. The analytical results were compared to Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board (Water Board, December 2013). Metals data was also compared to their respective Total Threshold Limit Concentration (TTLC) and/or Soluble Threshold Limit Concentration (STLC) at which a solid waste is considered a hazardous waste for waste disposal classification purposes per Title 26 of the California Code of Regulations.

As shown in Table 2, total and STLC lead were detected in composite sample Composite-3 (composite of discrete samples from EB-5 at 3 to 3½ feet and EB-6 at 3½ to 4 feet) at concentrations of 64 mg/kg and 14 mg/L, respectively. Based on these results, we requested the laboratory analyze the two discrete samples for total and STLC lead. Total lead was detected in the discrete samples at 64 and 13 mg/kg, respectively; soluble lead was detected at

2.5 and 0.37 mg/L, respectively. The laboratory reported a fair degree of heterogeneity within the samples, making it difficult to create a homogenized composite sample. The laboratory subsequently reanalyzed the Composite-3 sample and reported a soluble lead concentration of 2 mg/L. This data suggests that the initially reported STLC lead concentration in the Composite-3 sample appears anomalous, likely due to the heterogeneity of the sample.

### Conclusions and Recommendations

Based on the analytical results, the soil planned for excavation in the landscape areas appears suitable for disposal at a non-hazardous landfill. We recommend Federal Realty's general contractor provide a copy of this letter and the SMP Addendum to their landfill representative. The landfill's acceptance criteria should be reviewed and compared to the data collected. Prior to selecting an excavation contractor, we also recommend obtaining written approval from the selected landfill to direct load and off-haul the excavated soils.

### Limitations

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits

#### GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

#### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

### Job ID: 720-62077-1

#### Laboratory: TestAmerica Pleasanton

##### Narrative

##### Job Narrative 720-62077-1

##### Comments

No additional comments.

##### Receipt

The samples were received on 12/23/2014 3:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.3° C.

##### GC/MS VOA

Method 8260B: Internal standard (ISTD) response for the following sample was outside control limits: EB-4 (4-4.5) (720-62077-1), EB-5 (3.5-4) (720-62077-19), EB-6 (4-4.5) (720-62077-17). The sample(s) was re-extracted and/or re-analyzed with concurring results, and the second set of data has been reported.

Method(s) 8260B: Internal standard (ISTD) response for the following sample(s) was outside control limits: EB-1 (4.5-5) (720-62077-7). The sample(s) was re-analyzed with concurring results, and the original set of data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### GC/MS Semi VOA

Method 8270C SIM: The following sample was diluted due to the abundance of non-target analytes: COMPOSITE-2 (720-62077-37), COMPOSITE-1 (720-62077-28), COMPOSITE-3 (720-62077-45), COMPOSITE-4 (720-62077-54), COMPOSITE-5 (720-62077-63). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### GC Semi VOA

Method 8015B: The continuing calibration verification (CCV) associated with batch 173413 recovered above the upper control limit for C10-C28. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (MB 720-173331/1-A), EB-8 (5.5-6) (720-62077-14).

Method 8015B: The following sample required a dilution due to the nature of the sample matrix: EB-1 (4.5-5) (720-62077-7), EB-1 (6-6.5) (720-62077-8), EB-10 (4.5-5) (720-62077-10), EB-4 (4.5-5) (720-62077-2), EB-4 (4-4.5) (720-62077-1), EB-3 (4-4.5) (720-62077-3), EB-7 (4.5-5) (720-62077-16), EB-7 (4-4.5) (720-62077-15), EB-2 (3.5-4) (720-62077-5), EB-8 (4-4.5) (720-62077-13), EB-9 (4.5-5) (720-62077-12). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8081A: The following sample was diluted due to color: COMPOSITE-1 (720-62077-28), COMPOSITE-2 (720-62077-37), COMPOSITE-3 (720-62077-45), COMPOSITE-4 (720-62077-54), COMPOSITE-5 (720-62077-63). Elevated reporting limits (RL) are provided.

Method 8082: The following sample required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: (720-62077-28 MS), (720-62077-28 MSD), (LCS 720-173332/2-A), (MB 720-173332/1-A), COMPOSITE-2 (720-62077-37), COMPOSITE-3 (720-62077-45), COMPOSITE-4 (720-62077-54).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### Metals

Method 6010B: The following sample was diluted due to the abundance of non-target analyte: COMPOSITE-2 (720-62077-37), COMPOSITE-3 (720-62077-45), COMPOSITE-5 (720-62077-63). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Job Narrative 720-62077-3

### Comments

No additional comments.

### Receipt

The samples were received on 12/23/2014 3:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.3° C.

### GC Semi VOA

Method(s) 8015B: The following sample(s) required a dilution due to the nature of the sample matrix: EB-10 (6-6.5) (720-62077-56). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Hi Afsaneh,  
Could you let me know if the lab still has these samples? We may need to request additional analyses.

Thanks
