Haig's Delicacies
25673 Nickel Street
Hayward, CA 94545

Attn: Mr. Steve Cherezian

Subject: Monitoring Well Installation and Sampling and Indoor Air Report

25673 Nickel Place
Hayward, CA

Dear Mr. Cherezian:

Applied Water Resources, Corp. (AWR) has completed the multi medium sampling as noted above. AWR was requested to complete the sampling on behalf of Haig's Delicacies, the current property owner and occupant. The property is in a light industrial area within the City of Hayward, California. The site is a light industrial office/warehouse property currently occupied by Haig's Delicacies, which produces Hummus and other similar types of dips and spreads.

AWR had previously conducted soil sampling, grab groundwater sampling, and soil vapor sampling at the subject site. Those results were presented in a letter report dated December 2, 2016. During subsequent discussions with the bank regarding the grab groundwater results presented in the December 2, 2016 report, the bank requested indoor air sampling and installation and sampling of a monitoring well at the same location that yielded TCE in the grab groundwater sample to further evaluate site conditions and potential soil vapor intrusion.

PREVIOUS SITE INVESTIGATION

Applied Water Resources, Corp. (AWR) was contracted to complete a Phase II investigation at the above captioned site. The Phase II investigation was recommended by ADR Environmental Group, Inc. in their Phase I ESA dated September 20, 2016. The need for the Phase II investigation is based on the fact that volatile organic compounds (VOCs) had been historically stored outside the building and used inside the building by a former tenant. Based on this condition, ADR recommended that a Phase II investigation be performed.

AWR advanced three borings and one temporary soil gas point across the site in order to identify the presence or absence of petroleum hydrocarbons or solvents in the soil, groundwater and soil vapors within the property. The field investigation included the collection

Monitoring Well Installation and Sampling and Indoor Air Report

25673 Nickel Place
Hayward, California

and analysis of soil samples from three soil borings (SB-1 through SB-3), collection and analysis of grab groundwater samples from SB-1 and SB-2, and collection and analysis of one soil vapor sample adjacent to SB-1 (called SV-1).

The concentrations detected in the soil samples and soil vapor sample collected in November 2016 were all less than environmental screening levels (ESLs) for residential (unrestricted) land use.

The water samples collected from SB-1 and SB-2 were analyzed for TPHg, TPHd, and TPHmo by EPA Method 8015 and VOCs by EPA Method 8260. All concentrations detected in the water sample were at or below screening levels for commercial/industrial groundwater for non-drinking water with the exception of Trichloroethene (TCE), which was detected in SB-2 at a concentration of 64 ug/L. The ESL value for TCE is 5 ug/l for protecting potable groundwater and 49 ug/L for protecting indoor air from soil vapors emanating from groundwater.

During subsequent discussions with the bank regarding the grab groundwater presented in the December 2, 2016 report, the bank requested indoor air sampling and installation and sampling of a monitoring well at the site to further evaluate site conditions.

ADDITIONAL INVESTIGATION

AWR Applied Water Resources, Corp. (AWR) was contracted to complete additional investigation at the subject site. The additional investigation including installing and sampling a groundwater monitoring well near the former hazardous material storage area and collecting three air samples at the subject site.

The scope of work consisted of the following tasks:

- Task 1 - Utility Location, Permitting, and Health and Safety Plan
- Task 2 –Installation and Sampling of Monitoring Well and Indoor Air Assessment

Task 1 - Utility Location, Permitting, and Health and Safety Plan

As described below, investigation activities included installing and sampling a groundwater monitoring well at the Site. A well installation permit was obtained from Alameda County Public Works Agency. A copy of the permit is included with this report.

Underground Services Alert (USA) was notified and the monitoring well installation location was cleared for underground utilities.

Monitoring Well Installation and Sampling and Indoor Air Report

25673 Nickel Place
Hayward, California

As required by the Occupational Health and Safety Administration (OSHA) 29 CFR 1910.120, Hazardous Waste Operations and Emergency Responses, a site Health and Safety Plan (HSP) was prepared for use while conducting proposed field sampling activities.

Task 2 - Installation and Sampling of Monitoring Well and Indoor Air Assessment

Air Sampling

AWR placed three 6-Liter suma canisters at the subject site. The canisters were fitted with a regulator to collect the air sample over a 24-hour period. The canisters were placed at the site on February 3, 2017 and retrieved on February 4, 2017 after the 24-hour sample collection period. One canister was placed in the office area of the building, one canister was in the production area of the building and the third canister was placed outside the front door for an outdoor sample to compare with the indoor sample results.

Monitoring Well Installation

On February 3, 2017, the monitoring well was installed at the site using hollow stem auger drilling operated by a licensed well driller. Grab soil samples were collected by AWR from 2' and 7' in the well installation boring.

The well was installed in a 15-foot deep 6" diameter boring with 2"PVC perforated screen surrounded by #2/12 Monterey sand filter pack from 5 to 15 feet and 2"PVC blank pipe surrounded by neat cement grout for the upper five feet. The well was installed at grade with a permanent well box. Alameda County Public Works was present at the site to observe and approve the installation of the monitoring well.

Monitoring Well Development and Sampling

The well was developed and sampled on February 15, 2017.

Styrene	ND	ND	0.853 ug/m ³	940 ug/m ³
Toluene	ND	4.24 ug/m ³	1.81 ug/m ³	310 ug/m ³
Trichloroethene (TCE)	ND	ND	ND	0.48 ug/m ³
Vinyl Acetate	ND	ND	0.818 ug/m ³	No ESL developed
Vinyl Chloride	ND	ND	ND	0.0095 ug/m ³

NOTES:

1. These samples were run for the entire TO-15 Volatile Organic Compounds list - only compounds detected in one or more samples or of particular interest for this site are listed in the table. Please see the laboratory analysis report for a full list of analytes and respective reporting limits.
2. ESL is the Environmental Screening Level for unrestricted (residential) indoor air developed by the San Francisco Bay Regional Water Quality Control Board (RWQCB) and published in February 2016 for commercial/industrial properties.
3. ND is non detect. This compound was not detected in concentrations exceeding the laboratory detection limit in this sample.

Soil Sampling and Analysis

Grab soil samples were collected from 2 feet and 7 feet in the boring advanced for the monitoring wells installation. The soil samples were analyzed for the complete list of volatile organic compounds (VOCs) by EPA Method 8260, and total petroleum hydrocarbons in the C12-C22, C22-C32, and C32-C40 ranges. The test results for the soil can be found in Table 2.

Monitoring Well Installation and Sampling and Indoor Air Report

25673 Nickel Place
Hayward, California

Table 2 – Soil Sample Analysis Results

Sample Location and Depth	Date Sampled	TPH C12-C22	TPH C22-C32	TPH C32-C40	VOCs
MW-1 @ 2'	2/3/17	ND	564 mg/kg	772 mg/kg	All were ND
MW-1 @ 7'	2/3/17	ND	ND	ND	All were ND
ESL		100 mg/kg	5100 mg/kg	5100 mg/kg	various

NOTES:

1. ND is not detected - the compound was not present in concentrations exceeding the laboratory reporting limit.
2. These samples were run for the entire 8260 Volatile Organic Compounds list - only compounds detected in one or more samples are listed in the table. Please see the laboratory analysis report for a full list of analytes and respective reporting limits.
3. ESL is the Environmental Screening Level for unrestricted properties developed by the San Francisco Bay Regional Water Quality Control Board (RWQCB) and published in February 2016 - Summary Table A. Environmental Screening Levels (ESLs), Shallow Soils (<3m bgs), Groundwater is Current or Potential Source of Drinking Water

Monitoring Well Sample

The monitoring well was developed, purged, and sampled on February 15, 2017. The samples were collected using a low flow peristaltic pump and placed into new, laboratory supplied VOAs, preserved with HCl, and placed in a cooler for transportation to a certified laboratory for analysis of VOCs by EPA Method 8260. The analysis results are summarized in Table 3 below.

Table 3 – Groundwater Sample Analysis Results

Analyte	MW-1	ESL for drinking water protection	ESL for vapor intrusion commercial/industrial
cis-1,2-Dichloroethene	11.4 ug/L	6 ug/L	950 ug/L
Methyl-t-butyl ether (MTBE)	1.55 ug/L	5 ug/L	11,000 ug/L
Trichloroethene	44.9 ug/L	5 ug/L	49 ug/L

NOTES:

1. These samples were run for the entire 8260 Volatile Organic Compounds list - only compounds detected in one or more samples are listed in the table. Please see the laboratory analysis report for a full list of analytes and respective reporting limits.
2. ESL is the Environmental Screening Level developed by the San Francisco Bay Regional Water Quality Control Board (RWQCB) and published in February 2016.

Monitoring Well Installation and Sampling and Indoor Air Report

25673 Nickel Place
Hayward, California

The ESLs for protection of potable water for TCE and cis-1,2-DCE in water are 5.0 ug/L and 6.0 ug/L, respectively. The shallow water at the site is not currently used for drinking water. The ESLs to protect indoor air from vapor intrusion for commercial/industrial properties are 49ug/L for TCE and 950 ug/L for cis-1,2-DCE.

Sample Preservation and Transport

All samples for laboratory analysis were collected into containers supplied by the laboratory. Following collection, all samples were appropriately labeled with the sample ID, date and time of collection, and sampler's initials. The samples were placed on ice within an ice chest and transported to the laboratory under standard chain-of-custody procedures.

Waste Disposal

All soil cuttings, purge water, and other investigation derived waste were placed in drums, labeled, and tested for appropriate disposal.

CONCLUSIONS AND RECOMMENDATION

The additional investigation was conducted to further evaluate the potential for vapor intrusion of Trichloroethene (TCE) and cis-1,2-Dichloroethene (cis-1,2-DCE). TCE and cis-1,2-DCE were not detected in any of the air samples collected during this additional investigation. Furthermore, the concentration of TCE and cis-1,2-DCE in the groundwater sample from the monitoring well was less than the ESL for vapor intrusion in a commercial/industrial land use setting.

Based on the results, TCE and cis-1,2-DCE are present in groundwater in concentrations above the ESL for drinking water but below the ESL for protecting commercial and industrial land use from soil vapor intrusion. TCE and cis-1,2-DCE were not present at measurable concentrations in indoor air. Groundwater is not currently used for drinking water and the water needs in the area are met by the public utility. Therefore, TCE and cis-1,2-DCE do not appear to pose a significant risk to human health at the site. No additional investigation is recommended.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

ONE LAB. NATIONWIDE.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier Description

J	The identification of the analyte is acceptable; the reported value is an estimate.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE**.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

¹Cp²Tc³Ss⁴Cn⁵Sr⁶Qc⁷Gl⁸Al⁹Sc

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier Description

E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J4	The associated batch QC was outside the established quality control range for accuracy.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE**.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Applied Water Resources - Alameda, CA

Sample Delivery Group: L888198
Samples Received: 02/07/2017
Project Number: 25673 NICKEL
Description: 25673 Nickel Place

Report To: Janelle Amendola
2363 Mariner Square Dr
Suite 245
Alameda, CA 94501

Entire Report Reviewed By:

Brian Ford
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier Description

J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE**.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Specific Work Permit Conditions

1. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
2. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.
3. Prior to any drilling activities, it shall be the applicant's responsibility to contact and coordinate an Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits or agreements required for that Federal, State, County or City, and follow all City or County Ordinances. No work shall begin until all the permits and requirements have been approved or obtained. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County an Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.
4. Compliance with the well-sealing specifications shall not exempt the well-sealing contractor from complying with appropriate State reporting-requirements related to well construction or destruction (Sections 13750 through 13755

Alameda County Public Works Agency - Water Resources Well Permit

(Division 7, Chapter 10, Article 3) of the California Water Code). Contractor must complete State DWR Form 188 and mail original to the Alameda County Public Works Agency, Water Resources Section, within 30 days. Include permit number and site map.

5. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
 6. Wells shall have a Christy box or similar structure with a locking cap or cover. Well(s) shall be kept locked at all times. Well(s) that become damaged by traffic or construction shall be repaired in a timely manner or destroyed immediately (through permit process). No well(s) shall be left in a manner to act as a conduit at any time.
 7. Minimum surface seal thickness is two inches of cement grout placed by tremie.
 8. Minimum seal (Neat Cement seal) depth for monitoring wells is 5 feet below ground surface(BGS) or the maximum depth practicable or 20 feet.
 9. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
 10. Electronic Reporting Regulations (Chapter 30, Division 3 of Title 23 & Division 3 of Title 27, CCR) require electronic submission of any report or data required by a regulatory agency from a cleanup site. Submission dates are set by a Regional Water Board or by a regulatory agency. Once a report/data is successfully uploaded, as required, you have met the reporting requirement (i.e. the compliance measure for electronic submittals is the actual upload itself). The upload date should be on or prior to the regulatory due date.
-
