Report 0774.R1

Mr. Jim Feeley
TDP-Webster, LLC
39 Forrest Street, Suite 201
Mill Valley, CA 94941

SUBJECT: UNDERGROUND STORAGE TANK CLOSURE REPORT
2330 Webster Street
Oakland, CA 94612

Dear Mr. Feeley:

Terracon Consultants, Inc. (Terracon) has prepared this report documenting the removal of one 325-gallon capacity former underground storage tank (UST) from the property located at 2330 Webster Street in Oakland, California (Site) and the completion of UST closure activities at the Site under the oversight of the Alameda County Department of Environmental Health (ACDEH). Based on the type of petroleum hydrocarbons detected in soil beneath the former UST, it is suspected that the former UST previously contained fuel oil. The former UST was discovered during excavation activities associated with redevelopment of the Site. The UST was removed from the Site on August 29, 2017 and properly disposed of at offsite disposal facilities, as discussed below. Analysis of soil and groundwater samples collected at the Site on September 15, 2017 following removal of the UST indicate that residual contaminants present in soil and groundwater in the vicinity of the former UST do not pose a risk to human health or the environment. Based on the field conditions observed beneath and adjacent to the former UST, and the analytical results of soil and groundwater samples collected at the Site, no further action is warranted with respect to closure of the former UST.

A Site Location Map (Figure 1), a Site Vicinity Aerial Photograph showing the location of the former UST at the Site (Figure 2), and a Site Aerial Photograph showing sample collection locations (Figure 3) are attached with this report.

BACKGROUND

The Site is presently being developed by TDP-Webster, LLC of Mill Valley, California (TDP) for construction of a 234-unit apartment building. A former UST was encountered by Granite Excavation and Demolition, Inc. of 160 S. Linden Ave, Suite 100 in South San Francisco, California (Granite) during excavation of soil for construction of an underground parking structure associated with the Site development. Granite is a Class A, HAZ licensed contractor. The former UST was reportedly discovered at a depth of approximately 3 to 4 feet below the ground surface (bgs). The former UST reportedly measured approximately 3 feet in diameter and 6 feet in length, was constructed of single-wall bare steel, was filled with concrete, and reportedly had no visible holes. Based on the presence of the concrete inside the former UST it appears that the former UST

November 22, 2017

Report 0774.R1

had been previously closed in place. Because the former UST was filled with cement it was not possible or necessary to render the former UST interior atmosphere inert. A picture of the former UST is attached with this report as Appendix A.

The steel of the former UST and the concrete present inside the former UST were demolished and transported offsite for disposal by Granite. The concrete was reportedly disposed of at the Argent Materials facility in Oakland, California. A copy of the Argent Materials weighmaster certificate is attached with this report as Appendix B. The interior of the former UST was reportedly triple-rinsed by Granite prior to disposal. A copy of the Certificate of Triple Rinse is attached with this report as Appendix C. The steel of the former UST was reportedly transported by Granite and disposed of at Alco Iron and Metal in San Leandro, California. A copy of the Alco Metals Receiving Ticket is attached with this report as Appendix D.

It is our understanding that on August 30, 2017, Granite personnel collected samples of loose discolored soil from the ground surface in the area of the former UST in three stainless steel tubes. The sample designations were Sample 1, Sample 2, and Sample 3. The stainless-steel tubes were subsequently delivered to McCampbell Analytical, Inc. in Pittsburg, California (McCcampbell) with a chain of custody document for analysis.

The samples were analyzed for the following constituents for offsite disposal characterization:

- Total Petroleum Hydrocarbons (TPH) as gasoline, diesel and motor oil with silica gel cleanup using EPA method 8015B and 8015Bm.
- Volatile Organic Compounds (VOCs) using EPA Method 8260B.
- Semivolatile organic compounds using EPA Method 8270.
- PCBs by EPA Method 8081.
- CAM 17 Metals using EPA Method 200.8/6020.
- Asbestos using CARB Method 435.

The sample results are summarized in Tables 1A and 1B of this report. Copies of the laboratory report and chain of custody documentation are attached with this report as Appendix E.

Following removal of the former UST on August 29, 2017 and soil sample collection on August 30, 2017, the soil in the vicinity of the former UST location was excavated to a depth of approximately 9 feet bgs and the adjacent area to the east of the former UST was excavated to a depth of approximately 13.5 feet bgs for the planned construction of the underground parking garage.

The discovery of the former UST was reported to ACDEH on September 14, 2017 and a UST Closure Plan was completed and submitted to ACDEH. ACDEH subsequently approved the UST Closure Plan.

FIELD ACTIVITIES

Terracon personnel met with Ms. Barbara Jakub and Ms. Dilan Roe of the ACDEH at the Site on September 15, 2017 to inspect the former UST location and to collect one soil sample and one

November 22, 2017

Report 0774.R1

groundwater sample from beneath the former UST location. During the site visit, Mr. Jim Feeley of TDP identified the location where the former UST had been discovered. At the time of the inspection, the exposed soil surface in this area was approximately 9 feet bgs as a result of the excavation activities described above. Following review of site conditions, Ms. Jakub and Ms. Roe directed the exploratory hand augering and collection of one soil sample and one groundwater sample as follows:

A 3.5-inch outside diameter hand auger was used to excavate to a depth of 2 feet below the exposed soil surface of 9 feet bgs to a depth of 11 feet bgs. A slide hammer was used to drive a 2-inch diameter, 6-inch long stainless-steel tube into the bottom of the borehole for the collection of one soil sample from below the former UST designated as T1-11.0. After the tube had been filled with soil so that no headspace was present, the tube was removed from the sampler and the ends of the tube were sequentially covered with aluminum foil and plastic endcaps. The tube was subsequently labeled and stored in a cooler with ice pending delivery to McCampbell. Chain of custody procedures were observed for all sample handling. Ms. Jakub and Ms. Roe were onsite to observe the hand augering and sample collection.

The soil encountered in the borehole consisted of brown sandy and silty clay. No staining or discoloration were observed in the soil, and no petroleum hydrocarbon odors were detected in the soil. The soil excavated from the borehole was evaluated with a Photoionization Detector (PID) that was calibrated with a 100 ppm isobutylene standard. No organic vapors were detected with the PID in any of the soil excavated from the borehole or in the soil sample.

A second borehole, designated as location B12, was installed at a location approximately 6 feet to the east of the T-11.0 sampling location. At the B12 sampling location, the exposed soil surface was approximately 13.5 feet bgs as a result of the excavation activities described above. The B12 borehole was hand augered from 13.5 feet bgs to a depth of approximately 22 feet bgs. Groundwater was encountered in the borehole at a depth of approximately 18.5 feet bgs. The soil encountered in the borehole consisted of brown sandy silty clay with increasing sand content with increasing depth, and gray discoloration above the groundwater. No petroleum hydrocarbon odors were detected in the soil or groundwater from the borehole, and no free product or sheen were observed on the water. No organic vapors were detected with the PID in any of the soil excavated from the borehole for the groundwater sample. Ms. Jakub and Ms. Roe were onsite to observe hand augering of the borehole for groundwater sample collection and for evaluation of groundwater from the borehole.

One groundwater sample designated as B12-W was collected from the borehole using a peristaltic pump and new polyethylene tubing. New silicone tubing was used in the peristaltic pump rollers. The groundwater sample was collected directly from the discharge tubing and placed into two unpreserved 500-milliliter polys, three unpreserved 1-liter ambers, 2 unpreserved 40-milliliter amber Volatile Organic Analysis (VOA), and five 40-milliliter clear VOAs preserved with HCl with Teflon-lined screw-on caps. The VOAs were overturned and tapped to ensure that no air

November 22, 2017

Report 0774.R1

bubbles were present. The sample bottles were labeled and stored in a cooler with ice pending delivery to McCampbell. Chain of custody procedures were observed for all sample handling.

LABORATORY ANALYSIS

The soil sample collected from beneath the former UST and the groundwater sample collected from adjacent to the former UST were analyzed for unknown UST constituents, consistent with ACDEH requirements, as follows:

- TPH as gasoline, diesel and motor oil (the groundwater sample was also analyzed for bunker oil) using EPA method 8015B and 8015Bm.
- VOCs including MTBE, benzene, toluene, ethylbenzene, and xylenes (MBTEX) using EPA Method 8260B.
- Semivolatile organic compounds using EPA Method 8270.
- PCBs by EPA Method 8081.
- CAM 17 Metals using EPA Method 200.8/6020.

The laboratory analytical results of the soil sample are summarized in Table 2, and the laboratory analytical results of the groundwater sample are summarized in Table 3. Copies of the laboratory reports and chain of custody documentation are attached with this report in Appendix E.

DISCUSSION AND RECOMMENDATIONS

Based on Terracon's review of the groundwater flow direction at nearby sites, the groundwater flow direction at the Site is expected to be easterly, consistent with the surface topography, and towards Lake Merritt, which is located approximately 1,100 feet from the Site. Therefore, the B12 borehole, which was hand augered for groundwater sample collection, was located approximately 6 feet downgradient of the former UST.

Review of Tables 1A and 1B for soil disposal characterization, Table 2 for soil collected from beneath the former UST (T1-11.0 sampling location), and for groundwater collected from adjacent to, and downgradient from, the former UST (B12) demonstrates the following:

- Soil Sample Collected From Beneath Former UST (Sample Location T1-11.0): No organic compounds were detected and no metals were detected at concentrations exceeding their respective San Francisco Bay Regional Water Quality Control Board (SFRWQCB) February 2016 (Revision 3) Tier 1 soil screening level (for residential use) concentrations in the soil sample collected from beneath the former UST (see Table 2).
- Groundwater Sample (Sample Location B12-W): No organic compounds were detected and no metals were detected in the groundwater sample collected from adjacent to, and downgradient from, the former UST (see Table 3), with the following exceptions:

- 160 micrograms per liter (ug/L) of TPH as motor oil (TPH-MO).
- 160 ug/L of TPH as bunker oil (TPH-BO).
- 5.9 ug/L of chloroform.
- 0.51 ug/L of 1,1-Dichloroethene.
- 9.9 ug/L of nickel.

These concentrations are all below the SFRWQCB Tier 1 screening levels for residential use with the exception of the detection of chloroform at a concentration of 5.9 ug/L, which exceeds the Tier 1 screening level of 2.3 ug/L, and the detection of nickel at a concentration of 9.9 ug/L, which slightly exceeds the Tier 1 screening level of 8.2 ug/L. The detected chloroform groundwater concentration does not exceed the groundwater February 2016 Regional Water Quality Control Board (revision 3) Table GW-3 screening level for groundwater vapor intrusion for shallow groundwater for commercial land use, and for this reason is not present at a concentration that is likely to result in a complete exposure pathway for human exposure. Similarly, the detected nickel groundwater concentration is not a concern because the source for water at the site is a municipal supply, groundwater at the Site is not used at the Site, and for this reason human exposure to nickel in groundwater at the site is not a complete pathway for exposure.

- The chloroform and 1,1,-Dichloroethene detected in the groundwater sample are not associated with petroleum fuels. The source of these compounds is unknown, and they have also been historically detected at the Site in groundwater at similar concentrations. The following historical Site documents have identified the presence of these compounds at the subject Site:
 - 1/11/2010 - Phase I Environmental Site Assessment Report prepared by Ninyo & Moore.
 - 3/4/2010 - Phase II Environmental Site Assessment prepared by Ninyo & Moore.
 - 4/29/2015 - Peer Review of Environmental Assessment Reports prepared by RGA/Terracon.
 - 5/30/2017 - Work Plan for Subsurface Investigation prepared by RGA/Terracon.
 - 7/6/2017 - Site Cleanup Program Case RO0003247 Results of Subsurface Investigation prepared by RGA/Terracon.
- The source of the nickel detected in the groundwater sample is unknown. The absence of nickel detected in the soil sample collected from beneath the former UST at concentrations exceeding the Tier 1 soil screening level indicate that the nickel detected in groundwater does not appear to be associated with the former UST. Additionally, the detected nickel groundwater concentration is not a concern because the source for water at the site is a municipal supply, groundwater at the Site is not used at the Site, and for this reason human exposure to nickel in groundwater at the site is not a complete pathway for exposure.
- Soil Samples Collected for Offsite Disposal Characterization: No organic compounds were detected and no metals were detected at concentrations exceeding their respective

November 22, 2017

Report 0774.R1

SFRWQCB Tier 1 (residential use) soil screening levels in the soil samples collected for offsite disposal characterization (see Tables 1A and 1B) with the following exceptions:

- Naphthalene at concentrations ranging from 0.033 to 0.22 milligrams per kilogram (mg/kg).
- TBA at a concentration of 0.43 mg/kg.
- 2-Methylnaphthalene at concentrations of 0.38 and 0.79 mg/kg.
- Arsenic at concentrations ranging from 4.8 to 9.2 mg/kg.
- None of the compounds detected at concentrations exceeding their respective screening levels in soil that was characterized for offsite disposal were detected in the soil sample collected from beneath the former UST (T1-11.0) or in the groundwater sample (B12-W). This indicates that the soil excavation activities that were performed following removal of the UST were effective in removing soil impacted by these constituents at concentrations exceeding applicable screening levels.
- The arsenic concentrations detected in the soil samples that were collected for characterization of soil for offsite disposal are consistent with San Francisco Bay background arsenic concentrations. The SFRWQCB has identified arsenic concentrations of less than 11 mg/kg as consistent with San Francisco Bay Area background concentrations.

UST Closure activities at the Site have been completed, consistent with the requirements of the ACDEH-approved UST Closure Plan for the Site. Residual concentrations of constituents in soil and groundwater remaining at the Site following UST removal activities, as discussed above, do not pose a risk to human health or the environment. Based on the field conditions observed beneath and adjacent to the former UST, and the soil and groundwater sampling results discussed above, no further action is warranted with respect to closure of the former UST.

LIMITATIONS

This report was prepared solely for the use of TDP-Webster, LLC. The content and conclusions provided by Terracon in this assessment are based on information collected during our investigation, which may include, but not be limited to, visual Site inspections; interviews with the Site owner, regulatory agencies and other pertinent individuals; review of available public documents; subsurface exploration and our professional judgment based on said information at the time of preparation of this document. Any subsurface sample results and observations presented herein are considered to be representative of the area of investigation; however, geological conditions may vary between borings and may not necessarily apply to the general Site as a whole. If future subsurface or other conditions are revealed which vary from these findings, the newly revealed conditions must be evaluated and may invalidate the findings of this report.

This report is issued with the understanding that it is the responsibility of the owner, or his representative, to ensure that the information contained herein is brought to the attention of the appropriate regulatory agencies, where required by law. Additionally, it is the sole responsibility

November 22, 2017

Report 0774.R1

of the owner to properly dispose of any hazardous materials or hazardous wastes left onsite, in accordance with existing laws and regulations.

This report has been prepared in accordance with generally accepted practices using standards of care and diligence normally practiced by recognized consulting firms performing services of a similar nature. Terracon is not responsible for the accuracy or completeness of information provided by other individuals or entities which is used in this report. This report presents our professional judgment based upon data and findings identified in this report and interpretation of such data based upon our experience and background, and no warranty, either express or implied, is made. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur.

Should you have any questions, please do not hesitate to contact us at (510) 658-4363.

Sincerely,

Terracon Consultants, Inc.

Paul H. King
Professional Geologist #5901

APPENDIX C

Certificate of Triple Rinse for Former UST

CERTIFICATE OF TRIPLE RINSE

Granite Excavation and Demolition Inc
160 S Linden Ave Ste 100
South San Francisco, CA 94080

Granite Excavation and Demolition, Inc. hereby certifies to (Generator)

Maple NorCal Construction GP, L.L.C

That:

1. The Tanks:
1 x 500 gallon

Located at 2330 Webster Street Oakland

2. Have been triple rinsed with an environmentally safe detergent, applied by a high-pressure washer.
3. The forgoing method of triple rinse is suitable for the materials involved and fully complies with all applicable regulatory and permit requirements.

Date: 8/29/17.

Lead Tech: Z or Ze ERWIN OTOWLE .

Notes: - tank was full of concrete.
broke concrete and scrubbed tank with appropriate
surf ngs and detergent. Also as scrap.

"When Quality Counts"

Analytical Report

WorkOrder: 1708E74

Report Created for: Granite Excavation

160 S.Linden Avenue Suite 100
South San Francisco, CA 94080

Project Contact: Erwin O Toole

Project P.O.:

Project Name: 1313; 2330 Webster Street

Project Received: 08/30/2017

Analytical Report reviewed & approved for release on 09/05/2017 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Granite Excavation
Project: 1313; 2330 Webster Street
WorkOrder: 1708E74

Glossary Abbreviation

| | |
|--------------|--|
| %D | Serial Dilution Percent Difference |
| 95% Interval | 95% Confident Interval |
| DF | Dilution Factor |
| DI WET | (DISTLC) Waste Extraction Test using DI water |
| DISS | Dissolved (direct analysis of 0.45 µm filtered and acidified water sample) |
| DLT | Dilution Test (Serial Dilution) |
| DUP | Duplicate |
| EDL | Estimated Detection Limit |
| ERS | External reference sample. Second source calibration verification. |
| ITEF | International Toxicity Equivalence Factor |
| LCS | Laboratory Control Sample |
| MB | Method Blank |
| MB % Rec | % Recovery of Surrogate in Method Blank, if applicable |
| MDL | Method Detection Limit |
| ML | Minimum Level of Quantitation |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| N/A | Not Applicable |
| ND | Not detected at or above the indicated MDL or RL |
| NR | Data Not Reported due to matrix interference or insufficient sample amount. |
| PDS | Post Digestion Spike |
| PDSD | Post Digestion Spike Duplicate |
| PF | Prep Factor |
| RD | Relative Difference |
| RL | Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.) |
| RPD | Relative Percent Deviation |
| RRT | Relative Retention Time |
| SPK Val | Spike Value |
| SPKRef Val | Spike Reference Value |
| SPLP | Synthetic Precipitation Leachate Procedure |
| ST | Sorbent Tube |
| TCLP | Toxicity Characteristic Leachate Procedure |
| TEQ | Toxicity Equivalents |
| WET (STLC) | Waste Extraction Test (Soluble Threshold Limit Concentration) |

Glossary of Terms & Qualifier Definitions

Client: Granite Excavation
Project: 1313; 2330 Webster Street
WorkOrder: 1708E74

Analytical Qualifiers

- a3 Sample diluted due to high organic content.
d7 Strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
e2 Diesel range compounds are significant; no recognizable pattern
e7 Oil range compounds are significant
e8 Pattern resembles kerosene/kerosene range/jet fuel range
k10 CARB 435 Exception 1 - No asbestos detected

Quality Control Qualifiers

- F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F2 LCS/LCSD recovery and/or RPD is out of acceptance criteria.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

main@mccampbell.com

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

"When Quality Counts"

Analytical Report

WorkOrder: 1709668

Report Created for: Terracon

1466 66th Street
Emeryville, CA 94608

Project Contact: Paul King

Project P.O.:

Project Name: R1177B45/0774; 2330 Webster Street, Oakland

Project Received: 09/15/2017

Analytical Report reviewed & approved for release on 09/19/2017 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Terracon
Project: R1177B45/0774; 2330 Webster Street, Oakland
WorkOrder: 1709668

Glossary Abbreviation

| | |
|--------------|--|
| %D | Serial Dilution Percent Difference |
| 95% Interval | 95% Confident Interval |
| DF | Dilution Factor |
| DI WET | (DISTLC) Waste Extraction Test using DI water |
| DISS | Dissolved (direct analysis of 0.45 µm filtered and acidified water sample) |
| DLT | Dilution Test (Serial Dilution) |
| DUP | Duplicate |
| EDL | Estimated Detection Limit |
| ERS | External reference sample. Second source calibration verification. |
| ITEF | International Toxicity Equivalence Factor |
| LCS | Laboratory Control Sample |
| MB | Method Blank |
| MB % Rec | % Recovery of Surrogate in Method Blank, if applicable |
| MDL | Method Detection Limit |
| ML | Minimum Level of Quantitation |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| N/A | Not Applicable |
| ND | Not detected at or above the indicated MDL or RL |
| NR | Data Not Reported due to matrix interference or insufficient sample amount. |
| PDS | Post Digestion Spike |
| PDSD | Post Digestion Spike Duplicate |
| PF | Prep Factor |
| RD | Relative Difference |
| RL | Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.) |
| RPD | Relative Percent Deviation |
| RRT | Relative Retention Time |
| SPK Val | Spike Value |
| SPKRef Val | Spike Reference Value |
| SPLP | Synthetic Precipitation Leachate Procedure |
| ST | Sorbent Tube |
| TCLP | Toxicity Characteristic Leachate Procedure |
| TEQ | Toxicity Equivalents |
| WET (STLC) | Waste Extraction Test (Soluble Threshold Limit Concentration) |

Glossary of Terms & Qualifier Definitions

Client: Terracon
Project: R1177B45/0774; 2330 Webster Street, Oakland
WorkOrder: 1709668

Quality Control Qualifiers

- | | |
|-----|---|
| F2 | LCS/LCSD recovery and/or RPD is out of acceptance criteria. |
| F10 | MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix. |
| F13 | Indigenous sample results too high for a representative matrix spike analysis. |

Prepared by: Alexandra Iniguez

The following SampID: 001A contains testgroup Multi Range_S.

Comments:

NOTE: Soil samples are discarded 60 days after results are reported unless other arrangements are made (Water samples are 30 days). Hazardous samples will be returned to client or disposed of at client expense.

WORK ORDER SUMMARY

Client Name: TERRACON

Project: R1177B45/0774; 2330 Webster Street, Oakland

Work Order: 1709668

Client Contact: Paul King

QC Level: LEVEL 2

Contact's Email: paul.king@terracon.com; pdking0000@aol.com;
lab@pdenviro.com

| Lab ID | Client ID | Matrix | Test Name | Containers /Composites | Bottle & Preservative | De-chlorinated | Collection Date & Time | TAT | Sediment Content | Hold | SubOut |
|--------------|-----------|--------|---|------------------------|----------------------------|--------------------------|------------------------|--------|------------------|-------------------------------------|--------|
| 1709668-001A | T1-11.0 | Soil | Multi-Range TPH(g,d,mo) by EPA 8015Bm | 1 | Stainless Steel tube 2"x6" | <input type="checkbox"/> | 9/15/2017 | 2 days | | <input type="checkbox"/> | |
| | | | SW6020 (Metals) <Cadmium, Chromium, Lead, Nickel, Zinc> | | | <input type="checkbox"/> | | 2 days | | <input type="checkbox"/> | |
| | | | SW8270C (SVOCs) | | | <input type="checkbox"/> | | 2 days | | <input type="checkbox"/> | |
| | | | SW8270C (PAHs/PNAs) | | | <input type="checkbox"/> | | 2 days | | <input checked="" type="checkbox"/> | |
| | | | SW8260B (VOCs) | | | <input type="checkbox"/> | | 2 days | | <input type="checkbox"/> | |
| | | | SW8082 (PCBs Only) | | | <input type="checkbox"/> | | 2 days | | <input type="checkbox"/> | |

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).
- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

"When Quality Counts"

Analytical Report

WorkOrder: 1709669

Report Created for: Terracon

1466 66th Street
Emeryville, CA 94608

Project Contact: Paul King

Project P.O.:

Project Name: R1177B45/0774; 2330 Webster St., Oakland

Project Received: 09/15/2017

Analytical Report reviewed & approved for release on 09/20/2017 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Terracon
Project: R1177B45/0774; 2330 Webster St., Oakland
WorkOrder: 1709669

Glossary Abbreviation

| | |
|--------------|--|
| %D | Serial Dilution Percent Difference |
| 95% Interval | 95% Confident Interval |
| DF | Dilution Factor |
| DI WET | (DISTLC) Waste Extraction Test using DI water |
| DISS | Dissolved (direct analysis of 0.45 µm filtered and acidified water sample) |
| DLT | Dilution Test (Serial Dilution) |
| DUP | Duplicate |
| EDL | Estimated Detection Limit |
| ERS | External reference sample. Second source calibration verification. |
| ITEF | International Toxicity Equivalence Factor |
| LCS | Laboratory Control Sample |
| MB | Method Blank |
| MB % Rec | % Recovery of Surrogate in Method Blank, if applicable |
| MDL | Method Detection Limit |
| ML | Minimum Level of Quantitation |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| N/A | Not Applicable |
| ND | Not detected at or above the indicated MDL or RL |
| NR | Data Not Reported due to matrix interference or insufficient sample amount. |
| PDS | Post Digestion Spike |
| PDSD | Post Digestion Spike Duplicate |
| PF | Prep Factor |
| RD | Relative Difference |
| RL | Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.) |
| RPD | Relative Percent Deviation |
| RRT | Relative Retention Time |
| SPK Val | Spike Value |
| SPKRef Val | Spike Reference Value |
| SPLP | Synthetic Precipitation Leachate Procedure |
| ST | Sorbent Tube |
| TCLP | Toxicity Characteristic Leachate Procedure |
| TEQ | Toxicity Equivalents |
| WET (STLC) | Waste Extraction Test (Soluble Threshold Limit Concentration) |

Glossary of Terms & Qualifier Definitions

Client: Terracon

Project: R1177B45/0774; 2330 Webster St., Oakland

WorkOrder: 1709669

Analytical Qualifiers

| | |
|-----|---|
| S | Surrogate spike recovery outside accepted recovery limits |
| F | Sample was filtered upon arrival to the lab |
| a19 | Reporting limit near, but not identical to our standard reporting limit due to variable sample volume |
| b1 | Aqueous sample that contains greater than ~1 vol. % sediment |
| c11 | The surrogate recovery is above the upper control limit. The target analyte(s) were Not Detected (ND); therefore, the data has been reported. |
| e7 | Oil range compounds are significant |
