Mr. Mark Detterman, PG, CEG  
Alameda County Health Care Services Agency  
1131 Harbor Bay Parkway, Suite 250  
Alameda, California 94502-6577

Subject: Site Address: 2200 Telegraph Avenue, Oakland, California  
**Case No. RO0003258**

Dear Mr. Detterman:

SOMA's "Well Installation, Groundwater Monitoring, and Multi-Phase Extraction Pilot Test Report" for the subject property has been uploaded to the State's GeoTracker database and Alameda County's FTP site for your review.

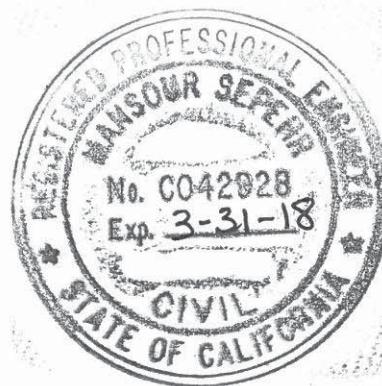

Thank you for your time in reviewing our report. Please do not hesitate to call me at (925) 734-6400, if you have questions or comments.

Sincerely,

A handwritten signature in black ink, appearing to read "Mansour Sepehr".

Mansour Sepehr, Ph.D.,PE  
Principal Hydrogeologist

## CERTIFICATION

SOMA Environmental Engineering, Inc. has prepared this report on behalf of Mo Mashhoon of Mash Petroleum for the site located at 2200 Telegraph Avenue, Oakland, California. The report was prepared in accordance with SOMA's Workplan to Conduct Multiphase Extraction Pilot Test, dated August 15, 2017, and in compliance with Alameda County Department of Environmental Health's correspondence dated August 23, 2017, granting approval of the work.

---

Mansour Sepehr, PhD, PE  
Principal Hydrogeologist

## **1. INTRODUCTION**

SOMA Environmental Engineering, Inc. (SOMA) has prepared this report on behalf of Mo Mashhoon of Mash Petroleum, Inc. for the site located at 2200 Telegraph Avenue, Oakland, California. The report was prepared in accordance with SOMA's Workplan to Conduct Multiphase Extraction Pilot Test, dated August 15, 2017, and in compliance with Alameda County Department of Environmental Health's correspondence dated August 23, 2017, granting approval of the work.

This report documents well installation related activities and laboratory analysis results for soil and groundwater samples collected during this event. This report also includes details of the multi-phase extraction pilot test conducted at the site in September/October 2017.

A separate report will shortly be submitted to include the site conceptual model, residual mass calculation of petroleum hydrocarbon in soil and groundwater, along with a corrective action plan.

### **1.1 Site Location and Description**

The subject property is located at 2200 Telegraph Avenue, Oakland, California. Figure 1 shows the location of the site and vicinity. The site is located at the southeast corner of the intersection of Grand Avenue and Telegraph Avenue in a commercial/residential area (Figure 2).

Based on the results of a subsurface investigation conducted by Conestoga-Rover & Associates (CRA), subsurface soils at the site generally consists of poorly graded sand and clayey sands to approximately 7 feet below ground surface (bgs), underlain by silt and clay to a depth of approximately 20 feet bgs. Groundwater was encountered at approximately 11 feet bgs. Groundwater flow at the site and vicinity has been observed to be to the southeast (CRA, 2012).

In addition, an underground Bay Area Rapid Transit (BART) railway is present beneath the subject property. The BART railway is comprised of three separate and parallel tunnels that run beneath the northwestern to southeastern portions of the site. See Figure 2. The tunnels are about 12 feet deep.

The property has been operated as a vehicle fuel service station since the mid 1940s. The site previously operated as a Chevron Station #9-3600 and is currently an active independent gasoline service station under "A&A Gas and Mart". Currently, there are three 10,000-gallon underground storage tanks (USTs) at the site.

Environmental evaluation of the site began in 1986 when new USTs replaced the older USTs and petroleum contamination was discovered. In 1994 the product lines also were replaced by a new piping system. Between 1986 and 2012, numerous soil and groundwater investigations were conducted at the subject site. Elevated concentrations of total petroleum hydrocarbon as gasoline (TPH-g), benzene, toluene, ethylbenzene and xylenes (BTEX) and methyl tertiary butyl ether (MtBE) were identified in groundwater plume migrating to the southeast.

The subsurface analytical data collected at the site was evaluated with respect to the State Water Resources Control Board (SWRCB) Low-Threat Closure Policy (LTCP). Based on the results of the sampling and monitoring activities and conditions set forth by the LTCP criteria, in a letter dated January 27, 2015 the site received no further action (NFA) status by the RWQCB and Alameda County Department of Environmental Health (ACDEH).

ACDEH conditioned the closure of the site by stating that if a change in land use occurs during site redevelopment, ACDEH must be notified that the case will be re-evaluated upon receipt of approved development plans. In addition the case closure documentation states that excavation or reconstruction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures. Lastly, the closure documentation states that the former Chevron facility was to be included in the City of Oakland Permit Tracking System due to the residual contamination that remained at the property.

During a Chevron site investigation in 2012, TPH-g and MtBE were detected at the neighboring 2201 Valley Street property. Based on prior investigations indicating groundwater flow to the southeast, the 2201 Valley Street property is located hydraulically downgradient of the Site. All monitoring wells associated with the site were destroyed in November 2014 as part of the case closure process.

Based on the information provided by PES, an underground Bay Area Rapid Transit (BART) railway, comprised of three parallel tunnels lies beneath the central portion of the site and southwestern portion of 2201 Valley Street property. The top of the BART tunnel is present at a depth of approximately 12 feet below ground surface (bgs).

## **1.2 Phase II Investigation Conducted by PES**

A Phase II investigation was conducted by PES in March 2017 in order to

1. Collect soil and groundwater data to confirm that current environmental conditions are not materially different from those during sampling performed during previous investigation
2. Investigate potential petroleum residuals in soil surrounding the USTs
3. Investigate along product piping to assess for releases since piping replacement in 1994

4. Confirm the extent of dissolved TPH-g in groundwater plume downgradient of the subject property
5. Provide spatial coverage across the site to eliminate data gaps
6. And collect soil/vapor data to evaluate for the presence of benzene and/or other fuel related VOCs in vadose zone soil in the vicinity of the identified groundwater plume in anticipation of ACDEH requirements related to a change in property use through redevelopment.

Eleven soil borings (SB-1 through SB-11) were advanced outside of BART right-of-way to depths ranging from 18 to 23 feet bgs using a direct push rig. Additionally, twelve soil borings (HA-1 through HA-12) were advanced using hand auger within the BART right-of-way to depths ranging between 2 and 5 feet bgs. Also, a total of sixteen soil vapor probes (SVP-1 through SVP-16) were advanced to depths of 5 feet bgs.

Results of the investigation indicated that TPH-g and detectable VOC concentrations in all soil samples were below their respective ESLs, except one soil sample, which exhibited significant concentration of 610 mg/kg( greater than ESL of 100 mg/Kg for commercial and residential land use type). Fourteen metals were detected in soil samples, of which Lead was higher than the ESL (80 mg/Kg) in three samples (SB9-6, HA3-2, and HA7-4).

In groundwater samples, TPH-g was higher than the odor nuisance ESL in 3 samples, (SB-3@9.5, SB-5@11.5, and SB-5@20). Benzene was detected in groundwater samples SB-3@9.5, SB-5@11.5, and SB-5@20, at concentrations exceeding the residential vapor intrusion ESL of 1.1 µg/L. Ethylbenzene was detected in groundwater samples SB-3@9.5, SB-5@11.5, and SB-5@20, SB-8@9.4 at concentrations exceeding the residential vapor intrusion ESL of 13 µg/L. Xylenes were detected in groundwater samples SB-5@11.5 and SB-5@20 at concentrations exceeding the residential vapor intrusion ESL of 1,300 µg/L. Naphthalene was detected in groundwater samples SB-3 at 9.5 µg/L µg/L, SB-5 at 11.5 µg/L and SB-5 at 20 µg/L at concentrations exceeding the residential vapor intrusion ESL of 20 µg/L. The ESL value for naphthalene direct exposure is 0.17 µg/L.

Based on the high contaminant concentrations detected during the investigation conducted by PES, SOMA prepared a workplan to conduct a Multi-Phase Extraction (MPE) pilot test in order to determine the feasibility of utilizing high vacuum MPE, as an interim remedial action to minimize impact of on-site contamination on current and future on site workers, occupants, and residents.

For conducting the pilot test, SOMA proposed to install three MPE pilot test wells (EX-1 thru EX-3) along with five observation wells (OB-1 thru OB-5).

## **2. WELL INSTALLATION**

Prior to conducting a multi-phase extraction (MPE) pilot test at the site, SOMA installed three MPE wells and three observation wells according to the following scope of work.

### **2.1 Scope of Work**

Details of the tasks listed below are discussed in the following sections of this report.

- Task 1: Permit acquisition, Health and Safety Plan preparation, and subsurface utility clearance
- Task 2: Installation of extraction and observation wells
- Task 3: Well survey
- Task 4: Well development
- Task 5: Waste disposal
- Task 6: Laboratory analysis of soil samples
- Task 7: Conducting a groundwater monitoring event prior to MPE pilot test and another after the test
- Task 8: Conducting Multi-Phase Extraction Pilot Test

### **2.2 Permit Acquisition, Health and Safety Plan Preparation, and Subsurface Utility Clearance**

In advance of drilling, SOMA obtained drilling permits (W2017-0637, W2017-0638) from Alameda County Public Works Agency (ACPWA) for installation of eight observation/extraction wells (Appendix A). On August 23 and 25, 2017, SOMA also provided the required notices to ACPWA in advance of drilling in order to schedule grouting inspection.

During field implementation activities, SOMA followed standard Health and Safety Plan (HASP) procedures. The HASP is a requirement of the Occupational Safety and Health Administration (OSHA), "Hazardous Waste Operation and Emergency Response" guidelines (29 CFR 1910.120) and the California Occupational Safety and Health Administration (Cal/OSHA) "Hazardous Waste Operation and Emergency Response" guidelines (CCR Title 8, section 5192). The HASP is designed to address safety provisions during field activities and protect the field crew from physical and chemical hazards resulting from drilling and sampling. It establishes personnel responsibilities, general safe work practices, field procedures, personal protective equipment standards,

decontamination procedures, and emergency action plans. Field staff and contractors reviewed and signed the HASP prior to beginning field operations.

On August 16, 2017, prior to well installation activities, SOMA's field crew visited the site and marked proposed well locations using chalk-based white paint. Underground Service Alert (USA) clearance verifying that drilling areas were clear of underground utilities was obtained. A private utility locator (OHJ) surveyed proposed drilling areas to locate any additional subsurface conduits.

### **2.3 Installation of Observation/Extraction Wells**

On August 28 and 29, 2017, under SOMA's oversight, Cascade Drilling installed, three 4-inch diameter extraction wells (EX-1, EX-2, and EX-3), and three 2-inch observation wells (OB-2, OB-4, OB-5) utilizing hollow stem auger (HSA) drilling methodology. On August 30, 2017 SOMA crew was on-site with Cascade, attempting to install two of the proposed observation wells (OB-1 and OB-3). However, these wells could not be installed due to the presence of pea gravel and because of the proposed locations being too close to the underground utilities. Required amount of clearance between the unground power lines and water lines was not available in order to install those observation wells. EX-1, EX-2, EX-3, and OB-4 were advanced to 25 feet bgs and OB-2 and OB-5 were advanced to 15 feet bgs.

EX-1 and EX-2 were installed on site immediately south of the UST cavity. EX-3, OB-2, OB-4, and OB-5 were installed on the neighboring property at 2201 Valley Street, to the east of the site. Well locations are shown in Figure 2.

To clear all underground utilities, well boreholes were hand augured to 5 feet below ground surface (bgs). A hollow stem auger (HSA) was used for drilling and construction of these wells. Soil samples were collected for chemical analysis in the areas of elevated PID readings, odor, or visual observations indicative of contaminated area, in the absence of above indicators, a minimum of one sample was collected from each well borings. During well advancement, SOMA's field geologist logged the continuous soil cores and characterized content of each soil-filled tube using the Visual-Manual method of the Unified Soil Classification System (USCS).

#### **2.3.1 Field Observations during Well Advancement**

During boring advancement, all locations were continuously cored and logged from ground surface on. Cored soil was retrieved from boreholes, checked for attributes characteristic of smear zone including hydrocarbon odors, visual staining, liquid phase hydrocarbons (free product), and screened based on photo-ionizing detector (PID) readings. PID readings, first encountered water and well screened intervals were noted on boring logs attached in Appendix B.

In borehole EX-1, EX-2, and EX-3, elevated PID readings were observed between the depths of 5 and 10 feet bgs, and ranged from 320 to 460 parts per million (ppm). In borehole EX-3, higher PID reading was also observed at 20 feet bgs at 280 ppm.

Observed geology at these well locations is detailed below. EX-1 comprised predominantly of clay, clayey sand, silty clay, and sandy gravelly clay. EX-2 comprised of silty sand, clayey sand, and sandy gravel. EX-3 comprised of fine sand, silt and clay, fine sand and clay, sandy silt, and sand, gravel, and silt. The observation wells (OB-2, OB-4, and OB-5) comprised of sand and silt, clay, and sand clay mixture. Field observations are noted in boring logs cataloged in Appendix B.

SOMA utilized a 0.02-inch-wide by 1.5-inch-long factory-slotted screen; the upper portion of each well consisted of blank PVC; no glues or other materials containing volatile organic compounds (VOCs) were used during well assembly. During well installation, a Monterey # 3 sand pack was emplaced around the screens and surged to consolidate the filter packs and eliminate voids. The filter packs were emplaced to a height of 1 foot above the top of the screens and sealed with a 1-foot-thick hydrated bentonite plug followed by an annular grout seal of neat cement. PVC caps were fitted to the bottom casings, without adhesives or tape, to protect the monitoring wells from accidental damage or tampering; traffic rated utility boxes with internal steel protective covers and locking caps were installed over the monitoring wellheads, and set in concrete, flush with the existing grade. Boring logs are included in Appendix B.

Installed Wells	Total Well Depth (feet toc)	Screen Interval (feet bgs)	Depth to Groundwater September 7, 2017 (feet toc)
EX-1	25	5-25	10.97
EX-2	25	5-25	11.78
EX-3	25	5-25	10.57
OB-2	15	5-15	10.40
OB-4	25	5-25	10.45
OB-5	15	5-15	10.42

## 2.4 Soil Sample Collection and Analysis

During drilling activity, SOMA collected soil samples for analysis at depths where PID readings or visual observations indicated presence of soil contamination.

During soil samples collection, SOMA's field geologist selected sediments of 6-inch-long sampling tubes and capped both ends of each sample with a Teflon liner and polyethylene end caps. Each soil sample was labeled with a unique identifier and immediately placed in a chilled ice chest for transport to a California state-certified environmental laboratory for analysis.

Samples collected during well installation activities were submitted to a California state-certified environmental laboratory for analysis as follows:

- TPH-g by Method 8015
- BTEX (benzene, toluene, ethylbenzene and xylenes), MtBE and full list volatile organic compounds (VOCs) by Method 8260.

## **2.5 Soil Analytical Results**

Soil analytical results are summarized in Table 1. Complete laboratory analytical reports are included in Appendix F.

All contaminants of concern were either below laboratory reporting limits or detected significantly below the environmental screening levels (ESLs) set forth by San Francisco Bay Regional Water Quality Control Board (direct exposure for construction worker).

## **2.6 Well Development and Survey**

On September 5 and 6, 2017, under SOMA's oversight, Cascade, developed all newly installed wells. Wells were developed a minimum of 72 hours following installation. The wells were developed by bailing out sediment-rich groundwater followed by pumping and surging the wells. This process continued until purged groundwater clarified substantially and groundwater quality parameters were stabilized.

The water-bearing intervals were developed by surging and bailing using a suitably sized surge block. Groundwater stabilization parameters were maintained during the development process and records of this data are included in Appendix D.

On August 31, 2017, Edgis Land Surveying and Mapping, a certified licensed land surveyor (License 6772), surveyed the newly installed wells. Latitude and longitude coordinates were surveyed to Zone III NAD 83 datum, and the elevation to NAVD 88 datum from GPS observations. Survey data are included in Appendix E, and were uploaded to the State Water Resources Control Board Geotracker database.

### **3. GROUNDWATER MONITORING- PRE MPE**

A groundwater monitoring event was conducted at the site on September 7, 2017 prior to the start of the MPE event.

#### **3.1 Field Activities**

During this event, all newly installed wells were measured for depth to groundwater. Additional field measurements and groundwater samples were collected from all six wells. Properties measured in the field were pH, temperature, and electrical conductivity (EC).

Purged groundwater was temporarily stored and secured on-site in 55-gallon drums pending transport to an appropriate disposal facility.

#### **3.2 Laboratory Analysis**

Groundwater samples were submitted to a California state-certified laboratory Enthalpy Analytical, for the following analysis:

- TPH-g (gasoline by EPA Method 8260),
- BTEX (benzene, toluene, ethylbenzene, and total xylenes), MtBE, Naphthalene, and other VOCs (by EPA Method 8260).

#### **3.3 Results**

Results of field measurements and laboratory analyses for the groundwater monitoring event conducted on September 7, 2017 follow below.

##### **3.3.1 Field Measurements**

Monitoring wells EX-1, EX-2, EX-3, OB-2, OB-4, and OB-5 were measured for depth to groundwater (Table 2). Depths to groundwater ranged from 10.25 feet in OB-2 to 13.17 feet in EX-1. Groundwater elevations ranged from 8.60 feet in EX-1 to 9.93 feet in OB-4.

Figure 3 displays the groundwater elevation map. The groundwater flows southeasterly at a gradient of 0.014 ft/ft. Groundwater gradient calculations are included in Appendix G.

##### **3.3.2 Laboratory Analysis**

Groundwater analytical data for this monitoring event is shown in Table 2. Appendix g includes the laboratory report and chain of custody form.

TPH-g was detected in concentrations ranging from 92 µg/L in EX-2 to 940 µg/L in EX-1. Figure 5 displays the contour map of TPH-g concentrations in groundwater. The TPH-g plume appears to be centered immediately south of the UST cavity around EX-1.

The following BTEX concentrations were observed:

- All BTEX analytes were below laboratory reporting limits in EX-1, EX-2, OB-2, and OB-4.
- In EX-3, ethylbenzene was detected at 3.2 µg/L and other BTEX analytes were below laboratory-reporting limits.
- In OB-5, ethylbenzene and total xylenes were detected at 6.30 µg/L and 4.60 µg/L, respectively; benzene and toluene were below laboratory-reporting limits.

MtBE was below the laboratory-reporting limit in OB-2 and OB-4 and was detected in concentrations ranging from 0.9 µg/L in EX-3 to 180 µg/L in EX-1. Figure 6 displays the contour map of MtBE concentrations in groundwater.

Naphthalene was detected in OB-5 at 2.70 µg/L and was below the laboratory-reporting limit in remaining groundwater samples.

Other VOCs were detected at low levels, ranging from 0.5 µg/L of n-Butylbenzene in OB-5 to 26 µg/L of chloromethane in OB-4. All detectable VOC concentrations are listed in Table 2.

Appendix G includes the laboratory report and chain of custody form for this monitoring event.

## 4. WASTE DISPOSAL

Upon completion of well installation activities, soil cuttings, grout, development/rinsate water and purged groundwater from monitoring event were stored on-site in several 55-gallon drums. Based on a request received from the disposal facility, a composite soil sample was collected from the stored drums on August 31, 2017 and sent to the analytical laboratory. Laboratory analytical report is included in Appendix F. The waste was profiled and then transported to an appropriate disposal facility on September 13, 2017 for disposal. Waste manifest is included in Appendix C.

## **5. MULTI-PHASE EXTRACTION PILOT TESTING**

To evaluate the effectiveness of the multi-phase extraction system in removing the residual petroleum hydrocarbons from soil and groundwater SOMA performed a multi-phase extraction (MPE) Pilot test at the site. The result of the pilot test will be utilized in preparation of corrective action plan (CAP) upon completing the site conceptual model.

### **5.1 Pilot Test Summary**

SOMA performed MPE pilot testing between September 14, 2017 to October 13, 2017, utilizing newly installed wells EX-1, EX-2, and EX-3 as extraction wells and OB-2, OB-4, and OB-5 as observation wells. Well locations are shown in Figure 2.

The pilot test was performed using a self-contained mobile treatment system (MTS), equipped with electrical generator, propane tank, liquid ring vacuum pump rated at 25-horsepower and 428-cubic feet per minute (cfm), air/water separator vessel, discharge hoses and traffic-rated hose ramps, downhole stingers, and a thermal oxidizer for vapor abatement (Figure 10). During the pilot test both soil vapor and hydrocarbon-impacted groundwater were extracted from the subsurface.

Physical and chemical parameters including applied vacuum, soil vapor extraction flow rates, oxidizer temperature, volume of groundwater extracted, volatile organic compound (VOC) concentrations, groundwater levels, and induced vacuum were monitored and recorded. Induced vacuum in the observation wells was measured using magnehelic vacuum gauges fitted to airtight well caps and drawdown was measured utilizing standard water level meters. VOC concentrations in the extracted soil vapor stream were continuously monitored using a photo ionization detector (PID) calibrated to hexane.

MPE pilot test operational data is presented in Tables 3 and 4 and field data sheets are attached in Appendix I. Extracted soil vapor samples were collected for laboratory analysis from influent and effluent gas streams during pilot testing (Figure 10 shows MTS sampling points).

### **5.2 Pilot test Objectives**

The overall objective of pilot testing was to evaluate whether MPE is sufficiently effective to justify full-scale implementation, and to evaluate its capability to remove contaminant mass in the most efficient and timely manner.

The first step in conducting the test was to dewater the extraction wells and cause a sizeable cone of depression in nearby observation wells in order to

increase the thickness or volume of unsaturated zone through which petroleum hydrocarbon vapor could flow and can be captured through vacuum hoses which are called stinger pipes. This process could also enhance the volatilization of petroleum constituents and helps in removing them from the subsurface.

The second step in this process is to remove soil vapor and groundwater from the impacted zone for treatment. The soil vapor could be treated by thermal or catalytic oxidizer depending upon the concentration of petroleum hydrocarbons in vapor stream. Usually if the concentration of the hydrocarbons falls below 3,000 ppmv, the catalytic oxidizer becomes more cost effective, otherwise the thermal oxidizer is more effective in treating the soil vapor.

The third step is to evaluate effectiveness of the proposed technology and assess site conditions with regard to potential full-scale implementation.

MPE systems have two primary configurations: dual-phase extraction (DPE) and two-phase extraction (TPE). DPE utilizes separate mechanical systems for pumping groundwater and extracting soil vapor from the groundwater and smear zone. The soil vapor is primarily released from the vadose zone and smear zone which used to be within the saturated zone prior to pumping groundwater and dewatering the area above the saturated zone. TPE utilizes a single vacuum pump to extract both groundwater and soil vapor through one-inch diameter tube (stinger) inserted in the well. The most cost-effective MPE configuration is determined by aquifer permeability and the corresponding yield of both air and water. DPE is appropriate for sites exhibiting higher permeability and larger well yields, at groundwater extraction rates greater than 2 gallons per minute (gpm). When aquifer yield is lower than 2 gpm, TPE is typically more cost-effective. In case of DPE operation dedicated pumps are inserted into the extraction wells to dewater the entire extraction well borehole so the stingers can only remove soil vapor more effectively. The down-hole pumps are programmed to pump water if the well is producing enough water. In case of complete dryness the pumps stop pumping to save energy and prevent pumps from over-heating and possible burn-out.

Pilot test results were utilized to determine the following:

1. Mass Removal: Pilot testing results determine whether MPE can accomplish removal of contaminant mass at satisfactory rates. Mass removal rates will be evaluated using data obtained during pilot testing.
2. Zone of Influence Evaluation: pilot test results provide vadose and saturated zone response to the application of vacuum and extracting groundwater from the subsurface.
3. Subsurface Soil Properties/Parameters Evaluation: pilot test results provide information about the nature and variability of site-specific subsurface parameters and contaminant distribution.

4. Discharge Concentrations/Design Parameters: pilot test results establish initial levels of contaminants as well as the final contaminant levels in the extracted gas and liquid at the conclusion of the pilot test. This data will be used for future treatment system design and discharge permitting.
5. Cost Evaluation: pilot test results can aid in evaluating cost of full-scale system implementation and operation, as well as assessment of duration of soil and groundwater remediation.

### **5.3 Pre-Pilot Test Activities**

In accordance with conditions of the various-locations Bay Area Air Quality Management District (BAAQMD) permit for the MTS, SOMA notified BAAQMD of the location, date, and duration of the pilot test, and the vapor treatment to be utilized.

Prior to MPE operation, a Wastewater Special Discharge Permit was obtained from the East Bay Municipal Utility District (EBMUD) to allow discharge to the site sewer during MPE activities (copy of discharge permit is attached in Appendix H). In preparation for discharge activities, on August 29, 2017, SOMA collected an effluent groundwater sample (after groundwater had passed through granular activated carbon drums). Samples were analyzed according to the EBMUD discharge requirements. Based on acceptable laboratory analytical results, EBMUD issued the discharge permit (No. 97215975), effective from September 7, 2017 through September 30, 2018. Certified laboratory analytical reports and chain of custody documentation are included in Appendix J. Periodic compliance reports will be completed in accordance with permit conditions for the duration of permit validity.

### **5.4 Field Work and Procedures**

The MTS system was operated continuously throughout the pilot test, if any interruptions occurred they were noted in pertinent field notes; MTS operational data collected during the pilot test included the following (no data was collected overnight):

- Oxidizer temperature
- Pump/air temperature
- Total flow
- Dilution flow
- Total liquids removed by vacuum
- PID readings

Oxidizer temperature and pump/air temperature are displayed on the MTS control panel and total flow was calculated using the pump vacuum observation. Dilution flow was read directly from the gas flow gauge at the air dilution flow control valve before the liquid ring pump; flow is reported in standard cubic feet per minute. Total liquids removed were read from a totalizing flow meter ahead of the GAC drums. Appendix I includes field data sheets (MTS Operational Data Sheets and MTS Monitoring Point Data Sheets) for recording data. Measurements were recorded periodically during daytime operating hours only.

All equipment was calibrated in the field in accordance with manufacturer recommendations. All extraction wells and observation wells were placed under pressure and observed for any evidence of air leakage around the cement/bentonite grout seal of the well. Shaving foam was used to detect leaks and no air leakage was observed at any of the wells. Groundwater elevations were measured at observation wells using a standard electrical water level meter graduated in tenths of inches. Stingers were connected to the MTS and extended into the extraction wells to within a few inches from the bottom of the well, removing groundwater from the well casing/screen by vacuum. Prior to insertion of the stinger, depth to groundwater was measured. The extraction hoses were placed under traffic rated hose ramps where necessary.

Groundwater levels as well as vacuum gauges were measured at all wells prior to commencement of the pilot test. Induced vacuum was measured using a magnehelic vacuum gauge (Dwyer), attached to a barbed fitting that was attached to an air tight well cap. Groundwater elevation was measured by removing the well cap and inserting a standard groundwater level probe. MPE wells (4-inch diameter) were fitted with compression caps that enable both vacuum and groundwater levels to be measured simultaneously. These compression caps remain air tight allowing a magnahelic gauge to be attached to the cap of each observation well. Vacuum gauges read a minimum range of 0.01 inches of water to 30 inches of mercury. Groundwater level probes read at graduations of 0.1 inches.

Extracted soil vapor concentrations were measured with a PID calibrated to hexane. Vapor samples were collected in Tedlar bags twice during the pilot test. Influent soil vapor samples were collected through a sampling port located on the vacuum pump discharge manifold and thermal oxidizer stack vapor samples were collected through a sampling port located at the top of the stack.

## 5.5 Pilot Test Implementation

Pilot testing began on September 14, 2017 and was terminated on October 13, 2017. Total test time was 15,275 minutes or 255 hours. Table 3 shows operational data during this period. Casing vacuum ranged from 17.6 to 27 inches of mercury and vapor extraction flow rate ranged from 38 to 187 scfm. VOC concentrations in the extracted soil vapor stream measured using a PID

ranged from 9 ppmv as hexane to 2,220 ppmv (Table 3). Thermal oxidizer temperatures ranged from 1,350 °F to 1,680 °F.

As the test was started using TPE process, a little drawdown was recorded at observation wells and the extraction wells were not dewatered. In addition, the vapor concentration using PID stayed below 100 ppmv. It was found that due to high groundwater yield (above 2 gpm) rather than TPE system DPE system needs to be employed by placing dedicated pumps inside each extraction well and dewatering these wells for effective operation. Therefore, after a few days of operation, SOMA switched to DPE system and as a result the extraction wells were dewatered and concentration of the vapor stream jumped to more than 2000 ppmv. Meanwhile the drawdown in the observation wells increased to more than 1.5 feet which increased air flow rate as well as the contaminant removal rate.

The Initial PID readings showed that the high concentration hydrocarbons in the air stream is primarily contributed from EX-3 and very little mass is being removed from EX-1 and EX-2 located at the south side of the existing USTs. It appears that the majority of petroleum hydrocarbons mass exist at the eastern side of the USTs within the 2201 Valley Street property.

A total of 53,952 gallons of groundwater (Table 3) was extracted at an average rate of 3.50 gpm during this operation.

## 5.6 Zone of Influence

The zone of influence (ZOI) for MPE pilot testing was estimated by determining pressure changes in observation wells versus distance from the extraction well at the end of the pilot test (EPA 1995). The effective ZOI is defined as the distance at which a pressure drop of 0.10 in-H<sub>2</sub>O is observed. The log of vacuum pressure measured in the observation well at the end of pilot testing is plotted against the distance from the MPE well. Table 6 and figures in Appendix K show the calculated ZOI for different well combinations. The data points describe straight lines and the lines intersect the pressure axis at 0.1 inches of water with the distance axis used to estimate the MPE ZOI. Due to the lack of sufficient number of observations that was described earlier (OB-1 and OB-3 could not be installed because of presence of pea gravel and utility lines being too close to them) the ZOI for wells EX-1 could not be well defined due to its long distance from the OB-2, OB-4, and OB-5, however, when EX-1 and EX-2 worked simultaneously their combined effect could be observed at the observation wells.

### 5.6.1 Zone of Influence During Vacuum Extraction

While extracting from EX-1 and EX-2, the combined impact of their operation caused certain pressure drop at the observation wells. As Table 6 shows the estimated ZOI was about 30 feet from EX-2.

ZOI during pumping from EX-2 alone was also about 30 feet. During pumping from EX-1 and EX-3 the ZOI was about 21 feet. The maximum ZOI of 24 feet was observed when all three extraction wells were operating simultaneously.

During the pilot test operation water levels at the observation wells also monitored and the observed draw-downs were recorded. The maximum water level draw-downs was recorded when all of the extraction wells were simultaneously operating and extracting vapor and groundwater. The maximum draw-downs during the simultaneous operation of extraction wells at OB-2, OB-4 and OB-5 were approximately 1.0, 1.0 and 1.52 feet, respectively. Appendix K shows the draw-down curves. The table showing the recorded water level elevations within the observation wells is included in Appendix I.

## **5.7 Pilot Testing Results**

Contaminant mass removed was estimated using flow rates and volume of air extracted during pilot testing, and VOC concentrations in ppmv as hexane measured by PID. VOC mass removal rate in lbs/day is estimated by dividing the estimated VOC mass removed during pilot testing by elapsed time.

The estimated total mass of VOCs removed from soil vapor extracted from extraction wells during this event was 135 lbs (as hexane). The estimated average VOC mass removal rate was approximately 13 lbs/day. The highest VOC mass removal rate was observed while extracting from EX-3 at approximately 64 lbs/day as calculated in Table 4. This is largely due to the presence of significant mass of contaminant around EX-3.

## **5.8 Soil Vapor Analytical Laboratory Results**

Per requirements of the BAAQMD, soil vapor samples were collected in Tedlar bags to show compliance with the 'permit to operate'. Vapor sampling was conducted twice during the event. Vapor samples were collected on October 5 and October 13, 2017.

Vapor samples were submitted under chain-of-custody documentation to McCampbell Analytical, Inc. of Pittsburg, a California state-certified environmental laboratory, where they were analyzed for TPH-g, BTEX, MtBE using USEPA Analytical Method TO-15 and for Naphthalene using USEPA Analytical Method TO-17. Naphthalene analysis by TO-17 was conducted based on a request from ACDEH dated August 23, 2017.

Vapor samples were obtained from the oxidizer stack to demonstrate compliance with BAAQMD various-locations permit conditions to determine destruction efficiency of the extracted vapors. Soil vapor analytical results are presented in

Table 5. Certified laboratory analytical reports and chain of custody documentation are included in Appendix J.

Estimated total mass of contaminants removed using laboratory data is presented in Table 5. The mass of contaminants (mostly TPH-g, ethylbenzene, and total Xylenes) removed by the pilot test was estimated using soil vapor analytical results for the pilot test and the median flow rate. The estimated total mass removed from extracted soil vapor was approximately 57 lbs. The discrepancy between the estimated total mass of VOCs removed utilizing PID data and the total mass of contaminants removed utilizing laboratory analysis data is a result of the difference between PID measurements as hexane and laboratory analyses of the extracted vapor stream. Mass removed utilizing PID readings, when converted from hexane to TPH-g is approximately 31 lbs. Additionally, it appears that vapor sampling for laboratory analysis may have coincided with somewhat higher PID readings. These occurrences likely influenced the calculation of contaminant mass based on vapor analytical results, contributing to the difference between the mass derived from PID readings and mass derived from analytical results. Concentrations based on laboratory analysis are representative only of that moment in the pilot test at which the extracted vapor stream was sampled. Since laboratory analytical results may not be representative of the entire length of the pilot test, unlike PID measurements that were collected continuously over the entire duration of the pilot test using different combinations of the extraction wells, the calculated mass of VOCs removed during the pilot test seems to be more representative and realistic estimate than using laboratory analysis. Analytical results support compliance with the BAAQMD permit achieving an abatement efficiency of over 99%.

### **5.9 Extracted Groundwater Treatment and Disposal**

Extracted groundwater water was treated and discharge to the on-site sewer system. Approximately 53,952 gallons was produced during the MPE pilot test. Extracted groundwater was treated through two 55-gallon GAC drums prior to discharge. In order to comply with discharge permit requirements SOMA will submit periodic discharge reports to EBMUD for the duration of permit validity.

## **6. GROUNDWATER MONITORING- POST MPE**

A second groundwater monitoring event was conducted at the site on October 23, 2017 at the end of the MPE event in order to evaluate the efficiency of the MPE pilot test.

## **6.1 Field Activities**

During this event, all newly installed wells were measured for depth to groundwater. Additional field measurements and groundwater samples were collected from all six wells. Properties measured in the field were pH, temperature, and electrical conductivity (EC).

## **6.2 Laboratory Analysis**

Groundwater samples were submitted to a California state-certified laboratory Enthalpy Analytical, for the following analysis:

- TPH-g (gasoline by EPA Method 8260),
- BTEX (benzene, toluene, ethylbenzene, and total xylenes), MtBE, Naphthalene, and other VOCs (by EPA Method 8260).

## **6.3 Results**

Results of field measurements and laboratory analyses for the groundwater monitoring event conducted on October 23, 2017 follow below.

### **6.3.1 Field Measurements**

Monitoring wells EX-1, EX-2, EX-3, OB-2, OB-4, and OB-5 were measured for depth to groundwater (Table 2). Depths to groundwater ranged from 10.34 feet in OB-2 and OB-5 to 11.97 feet in EX-1. Groundwater elevations ranged from 9.56 feet in EX-2 to 9.95 feet in EX-3.

Figure 4 displays the groundwater elevation contour map. As illustrated, groundwater levels were disturbed at the time of this monitoring event, due to the continuous pumping from extraction wells during the MPE pilot test. Since the groundwater levels were not in equilibrium condition, therefore, no groundwater gradient or flow direction can be established at this time.

The newly installed wells are not designed for monitoring purposes due to their long screen intervals. They are appropriate only for extraction purposes. Also, at the time of post-MPE monitoring event, the groundwater was not in equilibrium due to the long period of pumping during MPE pilot test. However, SOMA is currently preparing to conduct a CPT investigation at the site. During the proposed CPT investigation, SOMA anticipates to achieve a better understanding of the hydrogeology beneath the site and hence be able to evaluate stratigraphy of saturated sediments beneath the site. It is quite possible that there exist a shallow and deep water-bearing zone beneath the site and that the groundwater direction at each layer may be different for each layer. The existing remediation wells may not be suitable for evaluation of groundwater flow direction.

### 6.3.2 Laboratory Analysis

Groundwater analytical data for this monitoring event is shown in Table 2. Appendix G includes the laboratory report and chain of custody form.

TPH-g was below laboratory reporting limit in OB-4 and was detected in concentrations ranging from 76 µg/L in EX-2 to 2,900 µg/L in OB-5. Figure 7 displays the contour map of TPH-g concentrations in groundwater. The TPH-g plume appears to be centered to the southeast of the UST cavity in off-site well OB-5. Since the previous monitoring event (prior to MPE event), TPH-g has increased in EX-3 and OB-5 and decreased in all other wells.

The following BTEX concentrations were observed:

- All BTEX analytes were below laboratory reporting limits in OB-2, and OB-4.
- Benzene and toluene were below laboratory reporting limits in all groundwater samples.
- Ethylbenzene was detected in EX-1, EX-3, and OB-5 at 3.3 µg/L, 5.3 µg/L, and 85 µg/L, respectively. Since the previous monitoring event (prior to MPE event), ethylbenzene has increased in EX-1, EX-3 and OB-5.
- Total xylenes were detected in concentration ranging from 0.6 µg/L in EX-2 to 12 µg/L in EX-3.

MtBE was below the laboratory-reporting limit in OB-2 and OB-4 and was detected in concentrations ranging from 1.7 µg/L in EX-3 to 23 µg/L in EX-1. Figure 8 displays the contour map of MtBE concentrations in groundwater. Since the previous monitoring event (prior to MPE event), MtBE has increased in EX-3, decreased in EX-1 and EX-2; remained same in OB-5, and remained below laboratory reporting limits in OB-2 and OB-4.

Naphthalene was detected in EX-1, EX-3, and OB-5 at 19 µg/L, 14 µg/L, and 69 µg/L, respectively and was below the laboratory-reporting limit in remaining groundwater samples. Figure 9 displays the contour map of Naphthalene concentrations in groundwater. Since the previous monitoring event (prior to MPE event), naphthalene has increased in EX-1, EX-3 and OB-5 and remained below laboratory reporting limits in remaining wells.

Other VOCs were detected at low levels, ranging from 0.5 µg/L (of 1,2,4-Trimethylbenzene in EX-2 and Isopropylbenzene in OB-2) to 81 µg/L of Propylbenzene in OB-5. All detectable VOC concentrations are listed in Table 2.

Appendix G includes the laboratory report and chain of custody form for this monitoring event.

## 7. CONCLUSIONS AND RECOMMENDATIONS

- During this most recent investigation, six groundwater remediation/observation wells were installed (EX-1, EX-2, EX-3, OB-2, OB-4, and OB-5).
- In soil samples obtained during well installation, all contaminants of concern were either below laboratory reporting limits or detected significantly below the ESLs.
- A groundwater monitoring event was conducted prior to the MPE pilot testing, utilizing all newly installed wells in order to establish a baseline subsurface conditions.
- An MPE pilot test was conducted at the site utilizing EX-1, EX-2, and EX-3 as extraction wells and OB-2, OB-4, and OB-5 as observation wells. This MPE test ran from September 14, 2017 through October 13, 2017.
- At the end of the MPE pilot test, another groundwater monitoring event was conducted in order to evaluate the efficiency of the test.
- During the MPE pilot test, approximately 135 pounds of VOCs (as hexane) or 31 pounds of VOCs (as TPH-g) were removed from the subsurface at the rate of approximately 13 pounds/day (as hexane).
- Results of MPE test indicate that due to high permeability of subsurface, DPE is more effective in dewatering the saturated zone and extract more contaminant mass.
- Results of the post MPE groundwater monitoring showed that TPH-g increased in EX-3 and OB-5 and decreased in all other wells; ethylbenzene increased in EX-1, EX-3 and OB-5; MtBE increased in EX-3, decreased in EX-1 and EX-2; remained same in OB-5; and naphthalene increased in EX-1, EX-3 and OB-5.
- Decreased concentrations of contaminants suggest that MPE is effective in stripping and removing fuel hydrocarbon constituents subsurface. Increasing concentrations suggest that significant fuel hydrocarbon constituents are adsorbed within the subsurface and are being drawn towards the extraction well.
- It appears that the contaminant plume has migrated from the USTs area to the downgradient area on 2201 Valley Street in the vicinity of wells EX-3 and OB-5. Increasing contaminant concentrations in these wells right after

termination of the MPE pilot test is due to the accumulation of contaminant mass next to the extraction points (around EX-3 and OB-5).

- Naphthalene is the contaminant of concern that needs to be removed in order to achieve the residential land use conditions at the site.

SOMA prepared a workplan for further investigation at the site. Due to the fact that no exploratory borings have been completed beyond 25 feet bgs and hydrogeology and chemical distribution, beyond 25 feet bgs being unknown, SOMA proposed to conduct an investigation utilizing CPT/MIP (cone penetrometer test/ membrane interface probe) to the depth of 60 feet. The CPT/MIP study was recently completed and a report is now being prepared. Based on the data gathered during these recent investigations, there are very minor levels of petroleum hydrocarbons in soil and groundwater samples collected from the north and south ends of USTs.

SOMA is currently preparing a workplan to convert OB-5 into an extraction well based on the increased concentrations of TPH-g and naphthalene in this well and in order to expedite the cleanup process. The workplan will also include installation of additional borings to delineate the extent of lead, based on high lead concentrations observed in SB-9, HA-3, and HA-7 (drilled and sampled by PES in April 2017).

Upon the completion of field work, SOMA will complete the site conceptual model, calculate the remaining mass of contaminants and prepare a corrective action plan for the site.

Notes

Q volumetric flow rate  
 SCFM standard cubic feet per minute  
 ft<sup>3</sup> cubic feet per minute  
 VOC volatile organic compounds  
 PID photo-ionization detector  
 ppmv parts per million vapor

#### DERIVATION OF MASS REMOVAL RATE

ppmv as hexane/1,000,000 = VOC mole %  
 ft<sup>3</sup> of extracted air/(379 ft<sup>3</sup> air/lb-mole air) = moles of extracted air  
 (moles of extracted air)(VOC mole %)(86.2 lb/lb-mole hexane) = lbs of VOC removed as hexane  
 (lbs of VOC mass removed as hexane)(elapsed time) = lbs/min of VOC removed as hexane  
 (lbs/min of VOC removed as hexane)(60 min/1 hour)(24 hours/1 day) = lbs/day of VOC removed as hexane

**Table 5**

## Specific Work Permit Conditions

1. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
2. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.
3. Compliance with the well-sealing specifications shall not exempt the well-sealing contractor from complying with appropriate State reporting-requirements related to well construction or destruction (Sections 13750 through 13755 (Division 7, Chapter 10, Article 3) of the California Water Code). Contractor must complete State DWR Form 188 and mail original to the Alameda County Public Works Agency, Water Resources Section, within 30 days. Include permit number and site map.

## **Alameda County Public Works Agency - Water Resources Well Permit**

4. Applicant shall submit the copies of the approved encroachment permit to this office within 10 days.
  5. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
  6. Wells shall have a Christy box or similar structure with a locking cap or cover. Well(s) shall be kept locked at all times. Well(s) that become damaged by traffic or construction shall be repaired in a timely manner or destroyed immediately (through permit process). No well(s) shall be left in a manner to act as a conduit at any time.
  7. Minimum seal depth (Neat Cement Seal) is 2 feet below ground surface (BGS).
  8. Minimum surface seal thickness is two inches of cement grout placed by tremie.
  9. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
  10. Electronic Reporting Regulations (Chapter 30, Division 3 of Title 23 & Division 3 of Title 27, CCR) require electronic submission of any report or data required by a regulatory agency from a cleanup site. Submission dates are set by a Regional Water Board or by a regulatory agency. Once a report/data is successfully uploaded, as required, you have met the reporting requirement (i.e. the compliance measure for electronic submittals is the actual upload itself). The upload date should be on or prior to the regulatory due date.
  11. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

## Specific Work Permit Conditions

1. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
2. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.
3. Compliance with the well-sealing specifications shall not exempt the well-sealing contractor from complying with appropriate State reporting-requirements related to well construction or destruction (Sections 13750 through 13755 (Division 7, Chapter 10, Article 3) of the California Water Code). Contractor must complete State DWR Form 188 and mail original to the Alameda County Public Works Agency, Water Resources Section, within 30 days. Include permit number and site map.

## **Alameda County Public Works Agency - Water Resources Well Permit**

4. Applicant shall submit the copies of the approved encroachment permit to this office within 10 days.
  5. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
  6. Wells shall have a Christy box or similar structure with a locking cap or cover. Well(s) shall be kept locked at all times. Well(s) that become damaged by traffic or construction shall be repaired in a timely manner or destroyed immediately (through permit process). No well(s) shall be left in a manner to act as a conduit at any time.
  7. Minimum seal depth (Neat Cement Seal) is 2 feet below ground surface (BGS).
  8. Minimum surface seal thickness is two inches of cement grout placed by tremie.
  9. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
  10. Electronic Reporting Regulations (Chapter 30, Division 3 of Title 23 & Division 3 of Title 27, CCR) require electronic submission of any report or data required by a regulatory agency from a cleanup site. Submission dates are set by a Regional Water Board or by a regulatory agency. Once a report/data is successfully uploaded, as required, you have met the reporting requirement (i.e. the compliance measure for electronic submittals is the actual upload itself). The upload date should be on or prior to the regulatory due date.
  11. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

**CASE NARRATIVE**

Laboratory number: **292017**  
Client: **SOMA Environmental Engineering Inc.**  
Project: **6462**  
Location: **2200 Telegraph Ave, Oakland**  
Request Date: **08/31/17**  
Samples Received: **08/31/17**

This data package contains sample and QC results for thirteen soil samples, requested for the above referenced project on 08/31/17. The samples were received cold and intact.

**TPH-Purgeables and/or BTXE by GC (EPA 8015B):**

No analytical problems were encountered.

**Volatile Organics by GC/MS (EPA 8260B):**

Matrix spikes were not performed for this analysis in batch 251317 due to limited sample volume or interferences from the solvent in sample dilutions. Low surrogate recovery was observed for 1,2-dichloroethane-d4 in OB-5@10 (lab # 292017-013). EX-1@10 (lab # 292017-002), EX-3@10 (lab # 292017-007), and OB-5@10 (lab # 292017-013) were diluted due to high hydrocarbons. EX-2@10 (lab # 292017-004) and EX-3@5 (lab # 292017-006) were diluted due to high non-target analytes. No other analytical problems were encountered.

- Bubble Wrap       Foam blocks       Bags       None
- Cloth material       Cardboard       Styrofoam       Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet       Blue/Gel       None      Temp(°C) 5.8

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# A

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES NO  
 If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened? \_\_\_\_\_ YES NO

10. Are there any missing / extra samples? \_\_\_\_\_ YES NO

11. Are samples in the appropriate containers for indicated tests? \_\_\_\_\_ YES NO

12. Are sample labels present, in good condition and complete? \_\_\_\_\_ YES NO

13. Do the sample labels agree with custody papers? \_\_\_\_\_ YES NO

14. Was sufficient amount of sample sent for tests requested? \_\_\_\_\_ YES NO

15. Are the samples appropriately preserved? \_\_\_\_\_ YES NO N/A

16. Did you check preservatives for all bottles for each sample? \_\_\_\_\_ YES NO N/A

17. Did you document your preservative check? (pH strip lot# \_\_\_\_\_ ) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? \_\_\_\_\_ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? \_\_\_\_\_ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? \_\_\_\_\_ YES NO N/A

21. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES NO

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

## Detections Summary for 292017

Results for any subcontracted analyses are not included in this summary.

Client : SOMA Environmental Engineering Inc.  
Project : 6462  
Location : 2200 Telegraph Ave, Oakland

## No Detections

Client Sample ID : EX-1@10                      Laboratory Sample ID :                      292017-002

Analyte	Result	Flags	RL	Units	Basis	IDF	Method	Prep Method
Gasoline C7-C12	13	Y	1.1	mg/Kg	As Recd	1.000	EPA 8015B	EPA 5030B

Client Sample ID : EX-1@20                      Laboratory Sample ID :                      292017-003

## No Detections

Client Sample ID : EX-2@10                      Laboratory Sample ID :                      292017-004

Analyte	Result	Flags	RL	Units	Basis	IDF	Method	Prep Method
Gasoline C7-C12	45	Y	1.1	mg/Kg	As Recd	1.000	EPA 8015B	EPA 5030B
Isopropylbenzene	800		250	ug/Kg	As Recd	50.10	EPA 8260B	EPA 5030B
Propylbenzene	3,800		250	ug/Kg	As Recd	50.10	EPA 8260B	EPA 5030B
sec-Butylbenzene	1,100		250	ug/Kg	As Recd	50.10	EPA 8260B	EPA 5030B
n-Butylbenzene	3,300		250	ug/Kg	As Recd	50.10	EPA 8260B	EPA 5030B
Naphthalene	4,400		250	ug/Kg	As Recd	50.10	EPA 8260B	EPA 5030B

## No Detections

Analyte	Result	Flags	RL	Units	Basis	IDF	Method	Prep Method
Gasoline C7-C12	25	Y	1.1	mg/Kg	As Recd	1.000	EPA 8015B	EPA 5030B
Propylbenzene	1,100		250	ug/Kg	As Recd	49.56	EPA 8260B	EPA 5030B

Request Date: **08/31/17**  
Samples Received: **08/31/17**

This data package contains sample and QC results for one soil sample, requested for the above referenced project on 08/31/17. The sample was received cold and intact.

**Metals (EPA 6010B):**

No analytical problems were encountered.

## COOLER RECEIPT CHECKLIST

Login # 292016 Date Received 08/31/17 Number of coolers 1  
 Client SOMA Environmental Project 6462

Date Opened 08/31/17 By (print) DC (sign) [Signature]  
 Date Logged in \_\_\_\_\_ By (print) EJS (sign) [Signature]  
 Date Labelled \_\_\_\_\_ By (print) DC (sign) [Signature]

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES NO N/A

3. Were custody papers dry and intact when received? \_\_\_\_\_ YES NO

4. Were custody papers filled out properly (ink, signed, etc)? \_\_\_\_\_ YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) 5.8

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# A

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES NO  
 If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened? \_\_\_\_\_ YES NO

10. Are there any missing / extra samples? \_\_\_\_\_ YES NO

11. Are samples in the appropriate containers for indicated tests? \_\_\_\_\_ YES NO

12. Are sample labels present, in good condition and complete? \_\_\_\_\_ YES NO

13. Do the sample labels agree with custody papers? \_\_\_\_\_ YES NO

14. Was sufficient amount of sample sent for tests requested? \_\_\_\_\_ YES NO

15. Are the samples appropriately preserved? \_\_\_\_\_ YES NO N/A

16. Did you check preservatives for all bottles for each sample? \_\_\_\_\_ YES NO N/A

17. Did you document your preservative check? (pH strip lot# \_\_\_\_\_) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? \_\_\_\_\_ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? \_\_\_\_\_ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? \_\_\_\_\_ YES NO N/A

21. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES NO  
 If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

Notes:

## EPA On-line Tools for Site Assessment Calculation

### Hydraulic Gradient -- Magnitude and Direction

Gradient Calculation from fitting a plane to as many as thirty points

$$a x_1 + b y_1 + c = h_1$$

$$a x_2 + b y_2 + c = h_2$$

$$a x_3 + b y_3 + c = h_3$$

...

$$a x_{30} + b y_{30} + c = h_{30}$$

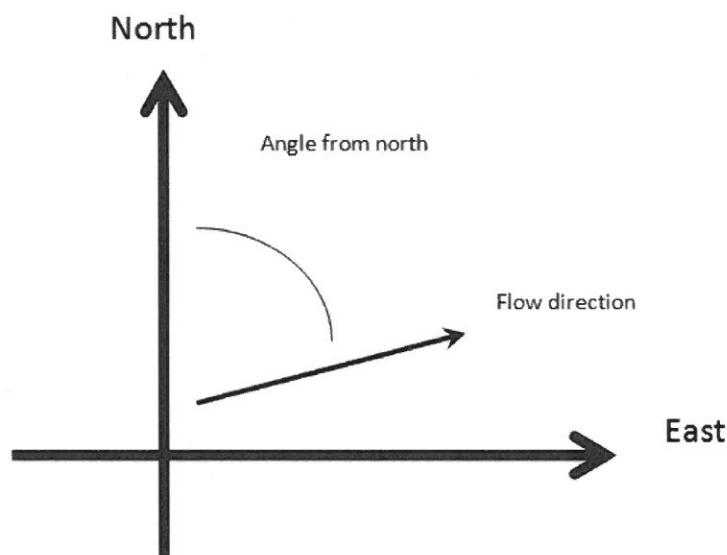

where  $(x_i, y_i)$  are the coordinates of the well and

$h_i$  is the head

$i = 1, 2, 3, \dots, 30$

The coefficients a, b, and c are calculated by a least-squares fitting of the data to a plane

The gradient is calculated from the square root of  $(a^2 + b^2)$  and the angle from the arctangent of  $a/b$  or  $b/a$  depending on the quadrant

 Date Labelled   By (print) DC (sign) S

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES NO N/A

3. Were custody papers dry and intact when received? YES NO

4. Were custody papers filled out properly (ink, signed, etc)? YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe)

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) 17.1

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# B

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES NO

If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened? YES NO

10. Are there any missing / extra samples? YES NO

11. Are samples in the appropriate containers for indicated tests? YES NO

12. Are sample labels present, in good condition and complete? YES NO

13. Do the sample labels agree with custody papers? YES NO

14. Was sufficient amount of sample sent for tests requested? YES NO

15. Are the samples appropriately preserved? YES NO N/A

16. Did you check preservatives for all bottles for each sample? YES NO N/A

17. Did you document your preservative check? (pH strip lot# \_\_\_\_\_) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? YES NO N/A

21. Was the client contacted concerning this sample delivery? YES NO

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

## Detections Summary for 292209

Results for any subcontracted analyses are not included in this summary.

Client : SOMA Environmental Engineering Inc.  
Project : 6461  
Location : 2200 Telegraph Ave, Oakland

Analyte	Result	Flags	RL	Units	Basis	IDF	Method	Prep Method
Gasoline C7-C12	940		50	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
Chloromethane	14		1.0	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
Bromomethane	1.1		1.0	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
MTBE	180		1.7	ug/L	As Recd	3.333	EPA 8260B	EPA 5030B
Chloroform	0.7		0.5	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
Isopropylbenzene	3.5		0.5	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
Propylbenzene	3.9		0.5	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
tert-Butylbenzene	4.9		0.5	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
sec-Butylbenzene	1.1		0.5	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B

Analyte	Result	Flags	RL	Units	Basis	IDF	Method	Prep Method
Gasoline C7-C12	92		50	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B
Chloromethane	2.2		1.0	ug/L	As Recd	1.000	EPA 8260B	EPA 5030B

# COOLER RECEIPT CHECKLIST

Login # 293 663 Date Received 10/23/17 Number of coolers 1  
 Client SOMA Environmental Engineering Project

Date Opened 10/23/17 By (print) 210 (sign) ✓  
 Date Logged in ✓ By (print) ✓ (sign) ✓  
 Date Labelled ✓ By (print) ✓ (sign) ✓

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES NO N/A

3. Were custody papers dry and intact when received? \_\_\_\_\_ YES NO

4. Were custody papers filled out properly (ink, signed, etc)? \_\_\_\_\_ YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) \_\_\_\_\_ YES NO

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) \_\_\_\_\_

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# \_\_\_\_\_

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES NO  
 If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened? \_\_\_\_\_ YES NO

10. Are there any missing / extra samples? \_\_\_\_\_ YES NO

11. Are samples in the appropriate containers for indicated tests? \_\_\_\_\_ YES NO

12. Are sample labels present, in good condition and complete? \_\_\_\_\_ YES NO

13. Do the sample labels agree with custody papers? \_\_\_\_\_ YES NO

14. Was sufficient amount of sample sent for tests requested? \_\_\_\_\_ YES NO

15. Are the samples appropriately preserved? \_\_\_\_\_ YES NO N/A

16. Did you check preservatives for all bottles for each sample? \_\_\_\_\_ YES NO N/A

17. Did you document your preservative check? (pH strip lot# \_\_\_\_\_) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? \_\_\_\_\_ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? \_\_\_\_\_ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? \_\_\_\_\_ YES NO N/A

21. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES NO  
 If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

\*\*\* See attached Permit Conditions \*\*\*

The operating parameters described above are based on information supplied by permit holder and may differ from the limits set forth in the attached conditions of the Permit to Operate. The limits of operation in the permit conditions are not to be exceeded. Exceeding these limits is considered a violation of District regulations subject to enforcement action.

August 30, 2017

EILEEN M. WHITE  
DIRECTOR OF WASTEWATER  
(510) 287-1149  
[eileen.white@ebmud.com](mailto:eileen.white@ebmud.com)

SOMA Environmental Engineering, Inc  
Ruchi Mathur  
6620 Owens Dr, Suite A  
Pleasanton, CA 94588

Dear Ruchi Mathur:

**Re: Wastewater Special Discharge Permit No. 97215975**

Enclosed is the Special Discharge Permit for SOMA Environmental Engineering for your information and records. A copy of *EBMUD Wastewater Control Ordinance* is available at [www.ebmud.com](http://www.ebmud.com). As a Permit holder, you are legally responsible for complying with all Permit conditions and requirements. Your permit expires on September 30, 2018.

**Please note that this Permit requires SOMA Environmental Engineering, Inc. to submit analytical data to EBMUD for approval prior to the initial discharge to the community sewer.**

SOMA Environmental Engineering, Inc. shall report to the Environmental Services Division any changes, permanent or temporary, to the premises or operations that significantly affect the quality or volume of the permitted discharge or deviate from the terms and conditions under which the Permit was granted.

If you have any questions regarding this Permit, please contact Charles Wittorp of the Environmental Services Division at (510) 287-1065.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Jacqueline T. Zipkin'.

Jacqueline T. Zipkin, P.E.  
Manager of Wastewater Environmental Services

# SPECIAL DISCHARGE PERMIT

## APPLICANT FORM

Special discharge permits are issued for short-term, limited volume discharge of many different types of wastewater or groundwater meeting special discharge criteria. An application must be completed when applying for a special discharge permit.

### INSTRUCTIONS FOR COMPLETING APPLICATION

**Please Type or Print the Requested Information**

**Permit Number** – The permit number will be provided by EBMUD.

**Applicant's Business Name** – Enter the name of the business that has legal responsibility for wastewater discharge, including responsibility for any enforcement actions or penalties imposed by the District.

**SIC Code** – Enter the Standard Industrial Classification Code. The code may be found in the United States Office of Management and Budget, Standard Industrial Classification Manual.

**Address of Site Discharging Wastewater** – Enter the street address, side sewer, or manhole location of the site discharging the wastewater.

**Applicant Mailing Address** – Enter the applicant's business mailing address.

**Contact Persons** – Enter the name, title, and phone number of those persons thoroughly familiar with the information reported in this application.

**Certification** – Enter the name and title of the person signing the application. The person signing the application must meet the signatory criteria of 40 CFR 403.12 (l). Persons meeting these criteria include:

- 1) A responsible corporate officer, such as:
  - a. a president, vice-president, secretary, treasurer, or other person performing similar policy or decision making functions or;
  - b. a manager of one or more manufacturing, production, or operating facilities. The facility must employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars). The person must have authority to sign documents.
- 2) A general partner or sole proprietor.
- 3) A duly authorized representative. The duly authorized representative must be:
  - a. an individual having responsibility for the overall operation of the facility from which the wastewater discharge originates. Examples include plant manager, field superintendent, or environmental manager;
  - b. authorized in writing by a person described in paragraph 1) or 2). The written authorization must be submitted to the District.

**Return the Signed Original Application to:**

EAST BAY MUNICIPAL UTILITY DISTRICT  
Environmental Services Division, MS 702  
P.O. Box 24055  
Oakland, CA 94623-1055

**Questions? Call the Environmental Services Division hotline at 510-287-1651.**

## CERTIFICATION

I understand that issuance of a Special Discharge Permit does not exempt or preclude the facility from being issued a Discharge Minimization or Pollution Prevention Permit.

I understand that I am legally responsible for discharge of wastewater from the facility and for complying with the Terms and Conditions of this Special Discharge Permit.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that the qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

# SPECIAL DISCHARGE PERMIT

PERMIT NUMBER

97215975

## APPLICANT FORM

**Purpose:** This information demonstrates the wastewater meets established criteria for a Special Discharge Permit. Check each statement that applies and supply required information.

*Reasonable and cost effective means of recycling and reuse of the wastewater are unavailable.* Provide information describing what means were considered, and why they were not implemented.

The site is under tight time and budget constraints for groundwater cleanup

*The wastewater is unsuitable for discharge to the storm sewer.* Provide explanation.

This is an underground storage tank site where groundwater has been impacted by petroleum hydrocarbons. As a remedial effort, impacted groundwater will be extracted, treated and discharged to the sewer.

*The wastewater is generated only within the SD-1 wastewater service area.* Provide location.

2200 Telegraph Ave, Oakland

*The wastewater meets source criteria.* Describe the source and operations generating the wastewater. Include the Wastewater Source Category from Special Discharge Permit Standard Terms and Conditions, Section A, II.

Groundwater extracted during a four week long multi-phase extraction (MPE) event at the site will be treated through two 55- gallon granular activated carbon (GAC) drums connected in series, prior to discharge. Source category (f): Other sources for temporary discharge

*The wastewater is discharged during a limited period of time.*

Maximum Discharge Duration: 1 year | days Start: Sep 5, 2017 Hours of Discharge: 24 hrs/day  
Wastewater volume and flow will not exceed 100 gals/minute.

Total Discharge Volume: | apprx 80,000 | gallons

*Discharge to the sanitary sewer during a rain event may be prohibited.* Describe containment capacity during a 10-year rain event (3.16 inches of rainfall in a 24-hour period).

MPE event will be paused during rain and hence no discharge will occur.

*The side sewer through which the wastewater is discharged has been identified.* Applicant is responsible for obtaining local permits to use manholes or cleanouts for discharge.

Attach a site diagram. Show facility location, property lines, wastewater source, drainage plumbing, the side sewer, and sampling location.

*Known and potential pollutants present in the wastewater are characterized.*

Attach a summarized list of all pollutant concentrations present in the wastewater. Also include the complete certified laboratory analytical report. See attached list of contaminants. Lab report will be submitted as soon as it is available.

*Treatment technology or best management practices have been identified that will result in the wastewater meeting discharge limits, and sediment or silt does not enter collection system.*

- 1) Describe pretreatment or best management practices that will be used to ensure the wastewater discharge complies with EBMUD Wastewater Control Ordinance wastewater discharge limits or permit-specific limits as necessary.

Extracted groundwater from site monitoring/remediation wells will be pretreated through two 55 gallon GAC drums connected in series. The final effluent from these drums will be sampled and sent to the laboratory for analysis to demonstrate compliance.

- 2) Attach a schematic flow diagram of the pretreatment system. The diagram must accurately depict the pretreatment system as constructed. Field deviation from the diagram is not allowed, unless pretreatment system modifications are approved and the permit revised prior to the discharge.

## SPECIAL DISCHARGE PERMIT

### Terms and Conditions

**SOMA Environmental Engineering, Inc.**  
**Permit Number 97215975**

#### **GENERAL CONDITIONS**

- I. SOMA Environmental Engineering, Inc. shall comply with all items of the *EBMUD Special Discharge Permit Standard Terms and Conditions*, most recent edition available at <http://www.ebmud.com/wastewater/commercial-waste/permits-and-wastewater-discharges/>.
- II. This Special Discharge Permit is a waiver of *EBMUD Wastewater Control Ordinance (Ordinance)*, which prohibits the discharge of stormwater, drainage water, and groundwater to the sanitary sewer. The most recent edition of the Ordinance is available at <http://www.ebmud.com/wastewater/commercial-waste/wastewater-control-ordinance-discharge-limits/>
- III. SOMA Environmental Engineering, Inc. shall discharge Special Discharge Wastewater only from the specific source described in the *Special Discharge Permit Applicant Form – 2200 Telegraph Ave, Oakland*.
- IV. SOMA Environmental Engineering, Inc. shall immediately cease discharge of treated or managed Special Discharge Wastewater if not in compliance with the terms and conditions of this Special Discharge Permit.
- V. SOMA Environmental Engineering, Inc. shall not discharge Special Discharge Wastewater authorized by this Special Discharge Permit after the expiration date.

#### **COMPLIANCE REQUIREMENTS**

- I. SOMA Environmental Engineering, Inc. shall pretreat, including sediment control, all Special Discharge Wastewater prior to discharge to the sanitary sewer. Pretreatment shall be sufficient to achieve compliance with the benchmark values and discharge limits established in this Special Discharge Permit.
- II. SOMA Environmental Engineering, Inc. shall post a sign in the work area stating "All Wastewater Discharge must comply with the Special Discharge Permit."
- III. SOMA Environmental Engineering, Inc. shall not discharge Special Discharge Wastewater to the sanitary sewer during a rain event or within 24 hours after a rain event, which is defined as any precipitation greater than a drizzle.
- IV. SOMA Environmental Engineering, Inc. shall not discharge Special Discharge Wastewater to the sanitary sewer at a flow rate greater than 100 gallons/minute.
- V. SOMA Environmental Engineering, Inc. shall obtain permission from the applicable city agency to discharge Special Discharge Wastewater to the sanitary sewer.
- VI. SOMA Environmental Engineering, Inc. shall discharge all Special Discharge Wastewater to the sanitary sewer through a totalizing flow meter.
- VII. SOMA Environmental Engineering, Inc. shall maintain a discharge log recording the date, time, and total volume of all Special Discharge Wastewater discharged to the sanitary sewer.

**SOMA Environmental Engineering, Inc.**  
**Permit Number 97215975**

**SPECIAL DISCHARGE PERMIT**  
**Terms and Conditions**

**WASTEWATER DISCHARGE LIMITS**

SOMA Environmental Engineering, Inc. shall not discharge Special Discharge Wastewater to the sanitary sewer if the strength of the wastewater exceeds:

- EBMUD Wastewater Control Ordinance, Wastewater Discharge Limits
- Total Petroleum Hydrocarbon for diesel, motor oil, and gasoline limit of 100 mg/L.

**SELF-MONITORING REQUIREMENTS**

- I. SOMA Environmental Engineering, Inc. shall collect a representative sample of **first batch of effluent discharge**, as depicted in the *Sanitary Sewer Schematic for Groundwater Discharge*.
- II. SOMA Environmental Engineering, Inc. shall submit analytical data to EBMUD for approval prior to discharge.
  - **Discharge of Special Discharge Wastewater to the sanitary sewer is prohibited until EBMUD reviews the self-monitoring report and grants approval.**
  - EBMUD may prohibit the discharge of the Special Discharge Wastewater and require additional treatment if any constituents exceed Wastewater Discharge Limits set forth by the permit.
  - Requirement for subsequent testing will depend on the initial test results. The parameters to be monitored, sample type, and analytical test methods shall be in accordance with the following table:

Parameter	Sample Type	Method
Total Metals <sup>1</sup>	Grab	EPA 200.7
Oil & Grease (HC)	Grab	EPA 1664 HEM-SGT
Volatile Organics	Grab	EPA 624
TPH-diesel, motor oil, gasoline	Grab	EPA 8015B
pH	Grab	SM 4500-H+B

<sup>(1)</sup>Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Mercury, Molybdenum, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc

- III. The self-monitoring report shall be submitted by email to [Charles.Wittorp@ebmud.com](mailto:Charles.Wittorp@ebmud.com). The self-monitoring report shall include:
  - A signed analytical report
  - The chain of custody documentation
  - The authorized signature and certification statement

**SOMA Environmental Engineering, Inc.**  
**Permit Number 97215975**

**SPECIAL DISCHARGE PERMIT**  
**Terms and Conditions**

**REPORTING REQUIREMENTS**

SOMA Environmental Engineering, Inc. shall submit a discharge log report, including:

- A copy of discharge logs which include dates, times, volumes, flow totalizer readings, and the total volume of Special Discharge Wastewater discharged to the sanitary sewer to date.
- The authorized signature and certification statement.

The discharge log report is due quarterly by the 10<sup>th</sup> of each month according to the following schedule:

Discharge Period	Discharge Log Due
September 2017 – November 2017	December 10, 2017
December 2017 – February 2018	March 10, 2018

The final discharge log is due within ten days of the final discharge to the community sewer. Submit all reports to EBMUD by email to [Charles.Wittorp@ebmud.com](mailto:Charles.Wittorp@ebmud.com).

**INSPECTION**

The District may conduct random, unannounced inspections to verify compliance with the terms and conditions of this Special Discharge Permit. SOMA Environmental Engineering, Inc. shall grant District personnel access to the facility and discharge logs to conduct inspections and collect Special Discharge Wastewater samples.

**ENFORCEMENT AND PENALTIES**

Failure to comply with the terms and conditions of this Special Discharge Permit and *Special Discharge Permit Standard Terms and Conditions* may result in enforcement actions, including violation follow-up fees, civil enforcement penalties, and administrative fines of up to \$5,000 per day.

**RATES AND CHARGES**

This Special Discharge Permit may be amended to include changes to rates and charges that may be established by the District during the term of this Special Discharge Permit. The treatment charge is \$1.18 per hundred cubic feet (Ccf) for the wastewater discharged to the community sewer. The permit fee is \$2,500 per year.

**AUTHORIZATION**

Special Discharger SOMA Environmental Engineering, Inc. is hereby authorized to discharge Special Discharge Wastewater to the sanitary sewer, subject to compliance with EBMUD Wastewater Control Ordinance, EBMUD Special Discharge Permit Standard Terms and Conditions, and billing conditions.

Effective: 07 SEP 17

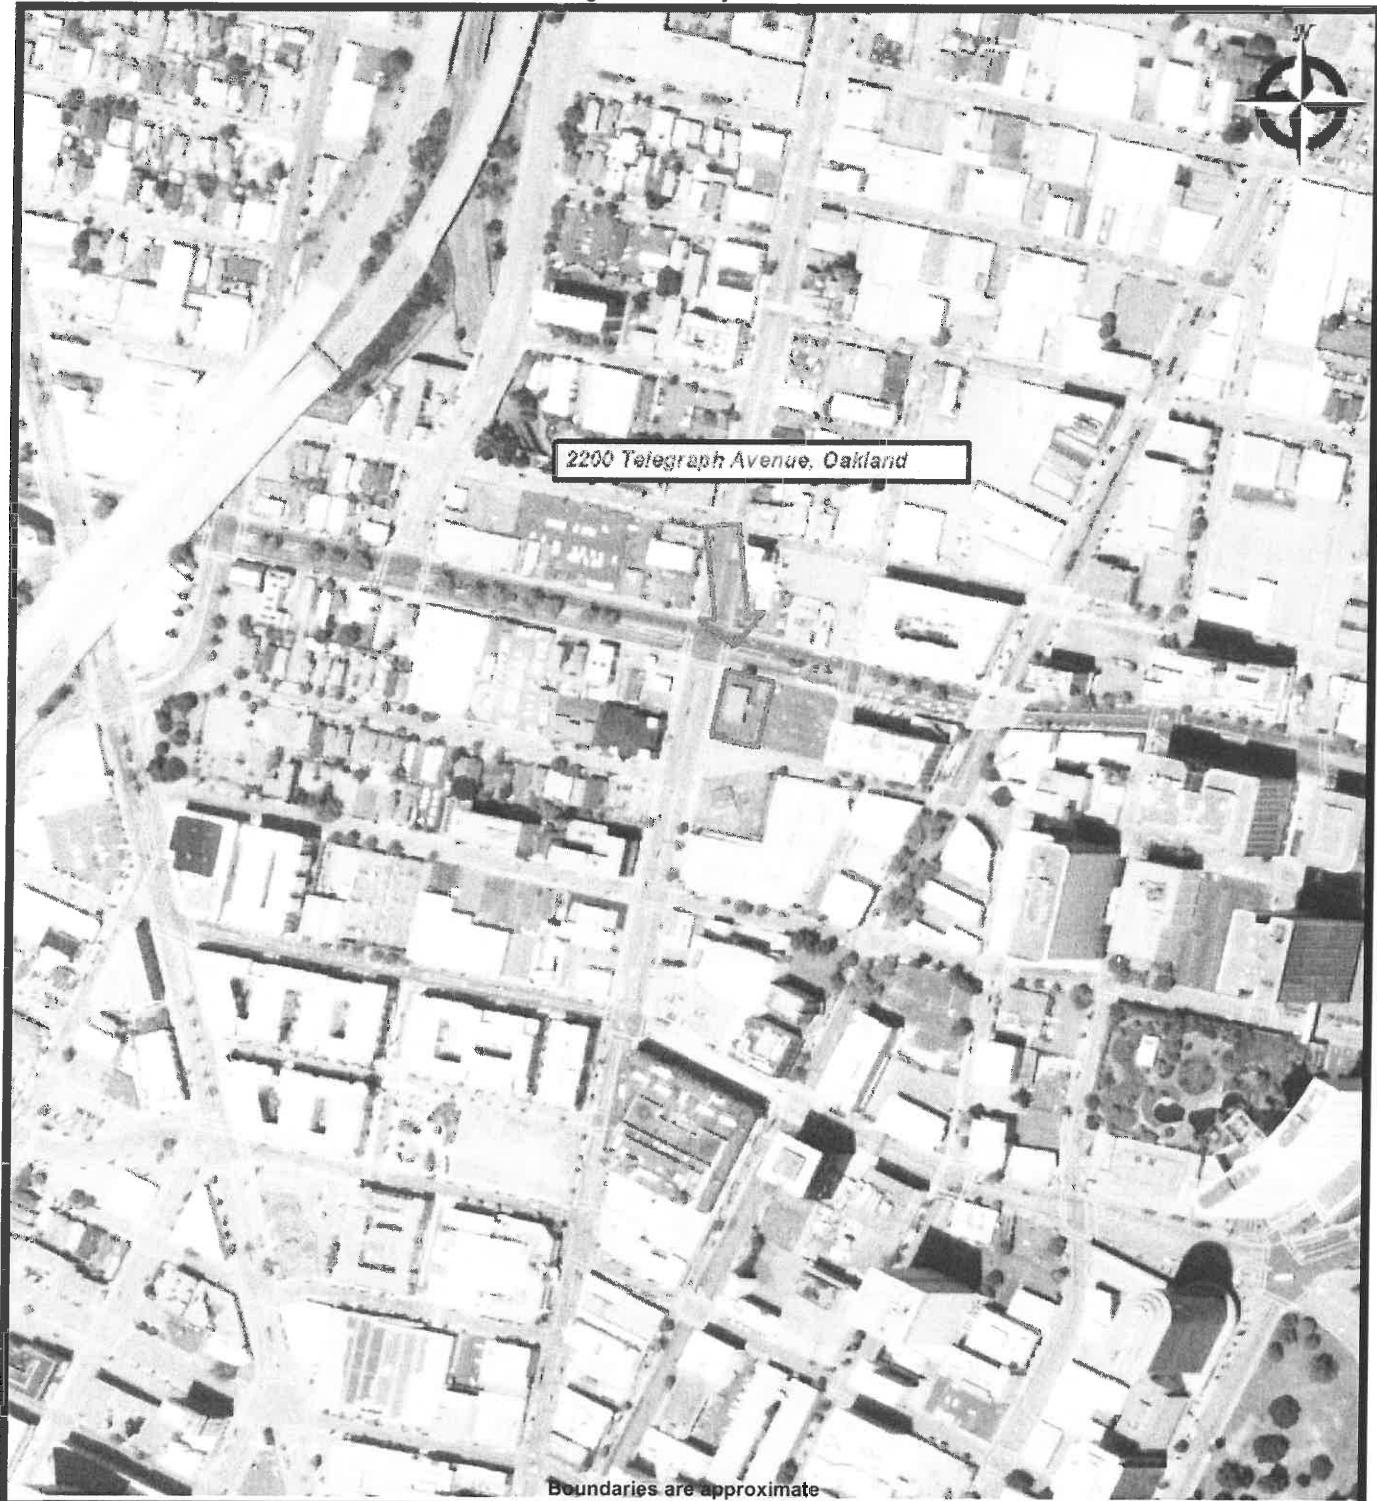

Expiration: 30 SEP 18

## SPECIAL DISCHARGE PERMIT APPLICATION - EBMUD

### LIST OF POLLUTANTS AT 2200 TELEGRAPH AVE., OAKLAND, CA

1. Gasoline -TPH-g
2. Benzene
3. Toluene
4. Ethylbenzene
5. Total xylenes
6. Methyl-tert butyl ether (MtBE)
7. Ter-butyl alcohol (TBA)
8. Ter amyl methyl ether (TAME)
9. Other VOCs (Volatile Organic Compounds)

Groundwater samples will be collected and analyzed for the above pollutants and results will be submitted to the EBMUD as soon as they become available.

**CASE NARRATIVE**

Laboratory number: **292015**  
Client: **SOMA Environmental Engineering Inc.**  
Project: **6465**  
Location: **2200 Telegraph Ave, Oakland**  
Request Date: **08/31/17**  
Samples Received: **08/31/17**

This data package contains sample and QC results for one water sample, requested for the above referenced project on 08/31/17. The sample was received on ice and intact.

**Volatile Organics by GC/MS (EPA 8260B):**

EFFLUENT (lab # 292015-001) had pH greater than 2. No other analytical problems were encountered.

**Metals (EPA 6010B and EPA 7470A):**

No analytical problems were encountered.

**Total Oil & Grease (HEM) (EPA 1664A):**

Matrix spikes were not performed for this analysis due to insufficient sample volume. No analytical problems were encountered.

## COOLER RECEIPT CHECKLIST

Login # 292015 Date Received 08/31/17 Number of coolers 1  
 Client SOMA Environmental Project 6465

Date Opened 08/31/17 By (print) EHS (sign) [Signature]  
 Date Logged in   By (print)   (sign)    
 Date Labelled   By (print)   (sign)  

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES NO N/A

3. Were custody papers dry and intact when received? \_\_\_\_\_ YES NO YES

4. Were custody papers filled out properly (ink, signed, etc)? \_\_\_\_\_ YES NO YES

5. Is the project identifiable from custody papers? (If so fill out top of form) \_\_\_\_\_ YES NO YES

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) 3.8

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# A

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES NO

If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened? \_\_\_\_\_ YES NO

10. Are there any missing / extra samples? \_\_\_\_\_ YES NO

11. Are samples in the appropriate containers for indicated tests? \_\_\_\_\_ YES NO

12. Are sample labels present, in good condition and complete? \_\_\_\_\_ YES NO

13. Do the sample labels agree with custody papers? \_\_\_\_\_ YES NO

14. Was sufficient amount of sample sent for tests requested? \_\_\_\_\_ YES NO

15. Are the samples appropriately preserved? \_\_\_\_\_ YES NO N/A

16. Did you check preservatives for all bottles for each sample? \_\_\_\_\_ YES NO N/A

17. Did you document your preservative check? (pH strip lot# 20B10871) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? \_\_\_\_\_ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? \_\_\_\_\_ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? \_\_\_\_\_ YES NO N/A

21. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES NO

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

COMMENTS (15) HNO<sub>3</sub> was added but pH did not adjust <2, sample 1

"When Quality Counts"

## Analytical Report

**WorkOrder:** 1710214

**Report Created for:** SOMA Environmental Engineering, Inc.

6620 Owens Drive, Ste. A  
Pleasanton, CA 94588

**Project Contact:** Ruchi Mathur

**Project P.O.:** 6465

**Project Name:** 6465; Telegraph

**Project Received:** 10/05/2017

Analytical Report reviewed & approved for release on 10/11/2017 by:

Angela Rydelius,  
Laboratory Manager

*The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.*

## Glossary of Terms & Qualifier Definitions

**Client:** SOMA Environmental Engineering, Inc.  
**Project:** 6465; Telegraph  
**WorkOrder:** 1710214

### Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

### Analytical Qualifiers

H Samples were analyzed out of holding time

## Glossary of Terms & Qualifier Definitions

**Client:** SOMA Environmental Engineering, Inc.

**Project:** 6465; Telegraph

**WorkOrder:** 1710214

### Quality Control Qualifiers

F2                   LCS/LCSD recovery and/or RPD is out of acceptance criteria.

## Analytical Report

**WorkOrder:** 1710545

**Report Created for:** SOMA Environmental Engineering, Inc.

6620 Owens Drive, Ste. A  
Pleasanton, CA 94588

**Project Contact:** Ruchi Mathur

**Project P.O.:**

**Project Name:** 6465; Telegraph

**Project Received:** 10/13/2017

Analytical Report reviewed & approved for release on 10/19/2017 by:

Angela Rydelius,  
Laboratory Manager

*The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.*

## Glossary of Terms & Qualifier Definitions

**Client:** SOMA Environmental Engineering, Inc.  
**Project:** 6465; Telegraph  
**WorkOrder:** 1710545

### Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

## Glossary of Terms & Qualifier Definitions

**Client:** SOMA Environmental Engineering, Inc.

**Project:** 6465; Telegraph

**WorkOrder:** 1710545

### Analytical Qualifiers

H Samples were analyzed out of holding time

a3 Sample diluted due to high organic content.

### Quality Control Qualifiers

F2 LCS/LCSD recovery and/or RPD is out of acceptance criteria.

## Case Narrative

**Client:** SOMA Environmental Engineering, Inc.  
**Project:** 6465; Telegraph

**Work Order:** 1710545  
October 19, 2017

### TO-15 ANALYSIS

All summa canisters are EVACUATED 5 days after the reporting of the results. Please call or email if a longer retention time is required.

In an effort to attain the lowest reporting limits possible for the majority of the TO-15 target list, high level compounds may be analyzed using EPA Method 8260B.

Polymer (Tedlar) bags are not recommended for TO15 samples. The disadvantages are listed in Appendix B of the DTSC Active Soil Gas Advisory of July 2015.

## Analytical Report

**Client:** SOMA Environmental Engineering, Inc.  
**Date Received:** 10/13/17 13:11  
**Date Prepared:** 10/14/17-10/17/17  
**Project:** 6465; Telegraph

**WorkOrder:** 1710545  
**Extraction Method:** TO15  
**Analytical Method:** TO15  
**Unit:**  $\mu\text{g}/\text{m}^3$

Project Manager: Jennifer Lagerbom

Prepared by: Kena Ponce

The following SampIDs: 001A, 002A contain testgroup TO15+GAS\_TEDLAR.; The following SampID: 003A contains testgroup TO17VOC+GAS.

## Comments:

NOTE: Soil samples are discarded 60 days after results are reported unless other arrangements are made (Water samples are 30 days). Hazardous samples will be returned to client or disposed of at client expense.

### Chain of Custody (COC) Information

Chain of custody present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample IDs noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Date and Time of collection noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sampler's name noted on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
COC agrees with Quote?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	NA <input type="checkbox"/>

### Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Shipping container/cooler in good condition?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Samples in proper containers/bottles?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	

### Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	NA <input type="checkbox"/>
Sample/Temp Blank temperature		Temp:	NA <input checked="" type="checkbox"/>
Water - VOA vials have zero headspace / no bubbles?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Sample labels checked for correct preservation?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Samples Received on Ice?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	

### UCMR Samples:

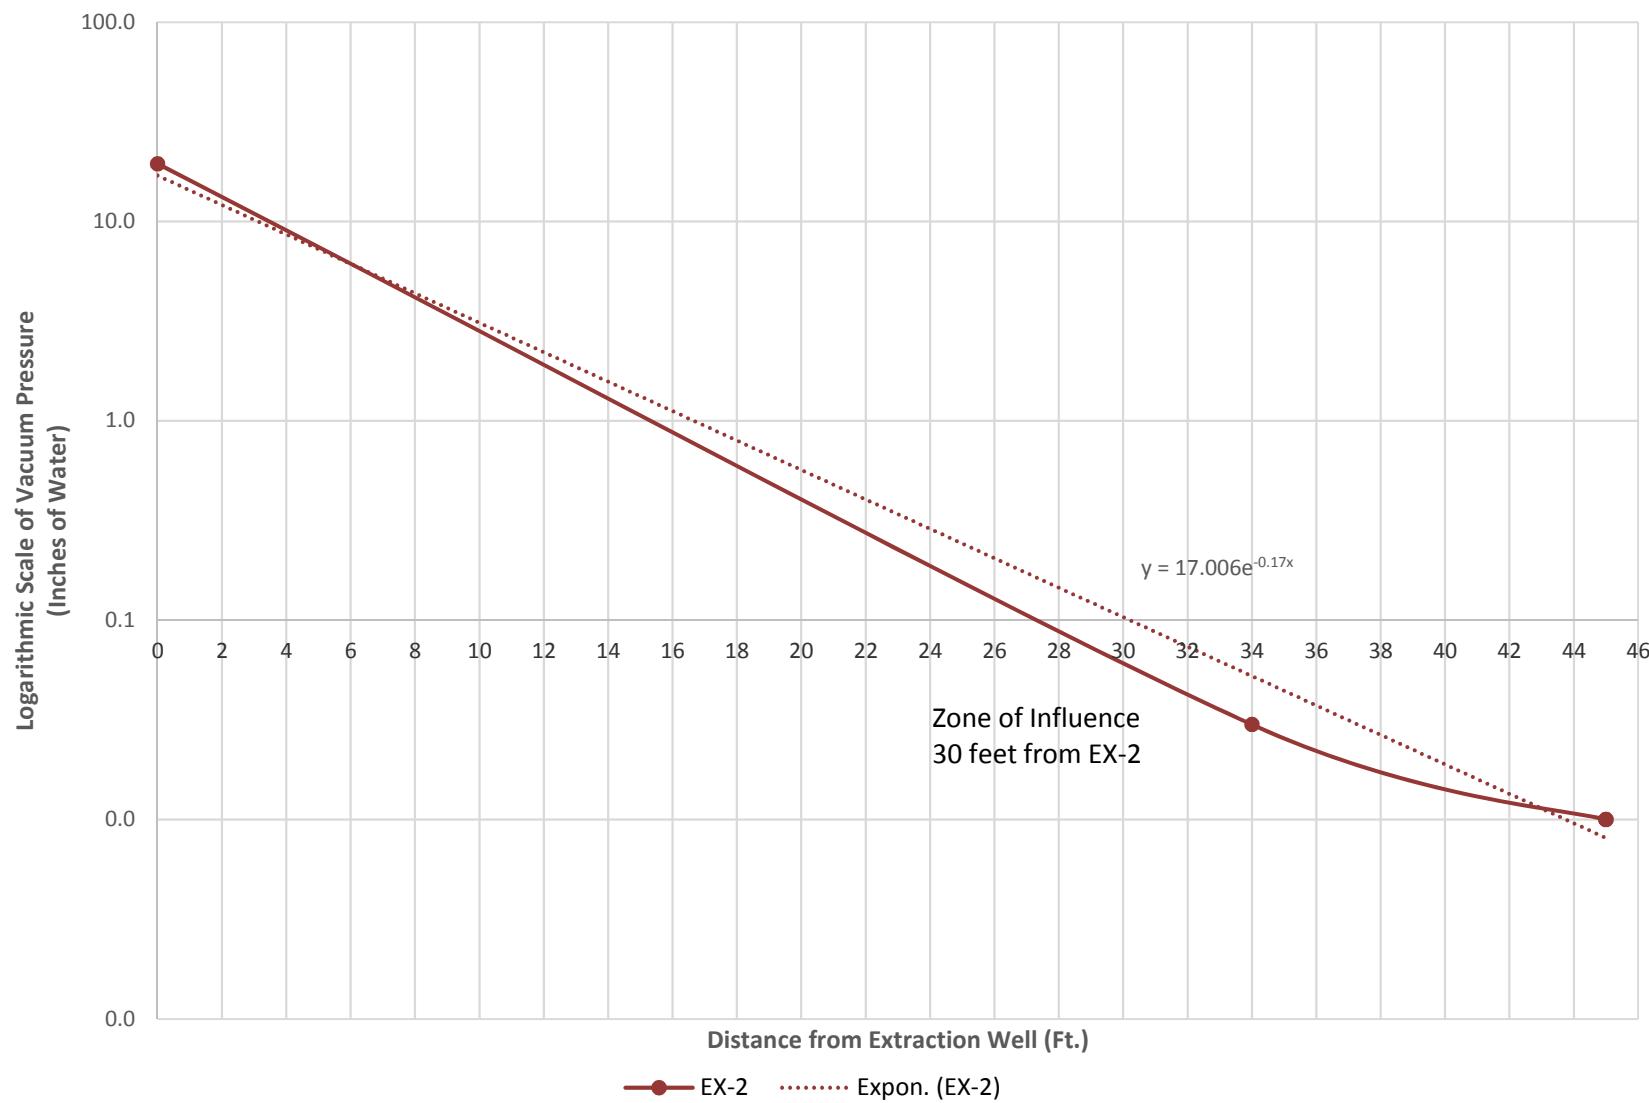

Total Chlorine tested and acceptable upon receipt for EPA 522?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>

Comments: Method SW8260B (VOCs) was received past its 0.25-day holding time. Method TO15 (VOCs) ( $\mu\text{g}/\text{m}^3$ ) was received past its 0.25-day holding time. Method SW8021B/8015Bm (GMBTEX) was received past its 0.25-day holding time. Method SW8260B (TPH-gas) was received past its 0.25-day holding time. Method TO15 (TPHgas) ( $\mu\text{g}/\text{m}^3$ ) was received past its 0.25-day holding time. Method Leak Check Compound by TO15 ( $\mu\text{g}/\text{m}^3$ ) was received past its 0.25-day holding time.
