Subject: 1314 Franklin Street Parcel
APN 2-55-1
Oakland, California

PHASE II ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Pasquali:

We are pleased to submit this document summarizing our phase II environmental assessment services conducted at the subject property (Property) in Oakland, California. The purpose of the assessment was to assess the potential presence of soil impact to shallow soil at the Property.

BACKGROUND

The Property is located at 1314 Franklin Street, in Oakland, California. The Property consists of a three-story parking garage, is approximately 1.38 acres in area, and is proposed for residential development. The Property currently contains a three-story parking structure with one level below ground, a ground floor parking level, and one upper parking level.

We understand that the development structure will consist of five levels of timber-framed construction over three levels of concrete construction. We understand that the lower two levels of concrete construction will be dedicated to parking with one level below grade (the existing basement will be used). The remaining floors will be used for residential purposes.

FIELD EXPLORATION ACTIVITIES

Prior to drilling, USA North Service Alert was contacted to notify operators of underground utilities at and near the Property. ENGEO also retained a private utility locator to survey the proposed boring locations.

A coring machine was used to core through the concrete slab at the basement level of the parking garage to expose the underlying soil material. Four borings were advanced to a depth of 5 feet using a hand auger. Samples were collected from each boring at depths of 1 and 5 feet. The soil cores were also screened for volatile organic compounds (VOCs) using a photoionization detector (PID).

All soil samples collected from each boring (8 samples) were analyzed for the following target analytes:

- *Total petroleum hydrocarbons (TPH) as gasoline (EPA Method 8260)*
- *Volatile organic compounds (VOCs) (EPA Method 8260)*
- *Semi-volatile organic compounds (VOCs) (EPA Method 8270)*
- *CAM-17 Metals (EPA Method 6010 and 7471A)*

The borings were filled with grout upon completion of sampling, and the cored location will be patched.

ANALYTICAL RESULTS

None of the soil samples exhibited detectable concentrations of VOCs, OCPs, PCBs, TPH-g, or TPH-mo. Trace concentrations of pentachlorophenol, isophorone, naphthalene, and TPH-d were detected intermittently in the analyzed samples. These detected concentrations were below respective Regional Screening Levels (RSLs) issued by the United States Environmental Protection Agency (USEPA) Region IX assuming a residential land use scenario¹.

Arsenic was detected in both composite soil samples analyzed. Although the detected concentrations are above the respective arsenic residential screening level, the detected concentrations are below expected background concentrations for the San Francisco Bay Area.

In addition, eight other metals (barium, chromium, cobalt, copper, lead, nickel, vanadium and zinc) were detected in both composite soil samples. In each case, these detected concentrations are below their respective screening levels for residential land use and/or typical background concentrations. However, one sample contained a chromium concentration greater than or equal to 50 mg/kg, which is 10 times the soluble threshold limit concentration (STLC) for chromium. The sample was subsequently analyzed for soluble chromium. The STLC was non-detect for soluble chromium.

The laboratory results are presented in their entirety in Appendix A. A summary of the soil sample analysis is presented in Table A.

DISCUSSION

The reported concentrations target analytes were below respective residential screening levels (allowing unrestricted re-use) and/or within expected background concentrations. It is our opinion that the soil material may be re-used onsite or transported and reused and/or disposed without restriction. If material is to be removed from the Property, we recommend sharing the testing results with the intended recipient.

Tel: (925) 866-9000
Fax: (925) 866-0199
RE: 1314 Franklin St. Oakland

Work Order No.: 1605047 Rev: 1

Dear Divya Bhargava:

Torrent Laboratory, Inc. received 8 sample(s) on May 06, 2016 for the analyses presented in the following Report.

As requested on the Chain of Custody, the eight samples received were tested as discrete samples for SVOCs, VOCs and TPH gas. The samples were combined into two 4:1 point composites for the additional analyses.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

CASE NARRATIVE

No issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

REVISIONS

Report revised to include STLC Chromium data for Composite S1- 4-8.

STLC

Note: Extraction of 50 g sample / 500g 0.2M Sodium Citrate Solution was performed according to wet extraction procedure (WET) which was rotated in a rotary shaker for 48 hours (+/- 4 hours).

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit (PQL) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m³ , mg.m³ , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS:

<p>B - Indicates when the analyte is found in the associated method or preparation blank</p> <p>D - Surrogate is not recoverable due to the necessary dilution of the sample</p> <p>E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.</p> <p>H- Indicates that the recommended holding time for the analyte or compound has been exceeded</p> <p>J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative</p> <p>NA - Not Analyzed</p> <p>N/A - Not Applicable</p> <p>NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added</p> <p>R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts</p> <p>S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative</p> <p>X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.</p>

Sample Receipt Checklist

Client Name: Engeo (San Ramon)

Date and Time Received: 5/6/2016 15:48

Project Name: 1314 Franklin St. Oakland

Received By: Idi

Work Order No.: 1605047

Physically Logged By: Idi

Checklist Completed By: Idi

Carrier Name: FedEx

Chain of Custody (COC) Information

Chain of custody present? Yes
Chain of custody signed when relinquished and received? Yes
Chain of custody agrees with sample labels? Yes
Custody seals intact on sample bottles? Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present
Shipping Container/Cooler In Good Condition? Yes
Samples in proper container/bottle? Yes
Samples containers intact? Yes
Sufficient sample volume for indicated test? Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes
Container/Temp Blank temperature in compliance? Yes Temperature: 4 °C
Water-VOA vials have zero headspace? No VOA vials submitted
Water-pH acceptable upon receipt? N/A
pH Checked by: n/a pH Adjusted by: n/a
